CRAWL-BOX / LABYRINTH ASSEMBLY INSTRUCTIONS

Every crawl-box comes with a top, bottom and sides, and self-drilling screws. The starting holes for screws have been predrilled. The flat edge of the box sides fit into the precut channels.

The crawl-boxes with dowels are assembled in much the same way. The only difference is that when inserting the dowels, they must be driven in with some force. For that purpose, please use a hammer, but make sure to use a towel or a piece of wood so that you don't damage any crawl-box parts with the hammer.

Before you screw everything together make sure that the top and bottom are perpendicular (at a right angle) to the sides. Also, if you place a side of the dowel box on a flat surface, check that the box does not rock.

If you encounter any problems, please call Radomir at 310-266-8973.

Enjoy.
