

ROCKING BOAT ASSEMBLY INSTRUCTIONS

Please FULLY read these instructions before you start assembling the Rocking Boat

The disassembled items come with 1-inch diameter dowel, 5 steps and two sides.

The dowel and steps fit snugly into the holes, so make sure they are all the way in when assembling it.

1. Place one side of the Rocking Boat on a flat hard surface with the holes facing up.
2. Put all the steps and the dowel in the holes of one side of the Rocking Boat, knocking the ends with a hammer until they sit firmly at the bottom of the holes.
3. When done, place the other side of the Rocking Boat on top of the steps and dowel, working from one end to the other.
4. Tap the top of the side of the Rocking Boat with a hammer so the steps and dowel go all the way into the holes. (see NOTE A)
5. The screws are provided so screw them back through the existing holes on the sides. (see NOTE B)

NOTE A: In order not to damage the side with a hammer, place a flat piece of scrap board, on the surface on which you will use the hammer, as a protection. or use a “dead weight hammer” if you have one. You can also use a little wood glue, but it is not essential.

NOTE B: Before you put the screws in make sure that the whole assembly sits flat on a level surface.
