

## **Preliminary Results for BLIS probiotic trial**

November 26, 2015

Preliminary results from a field trial in the Eastern Bay of Plenty using BLIS K12 probiotic presented to the Paediatric Society of New Zealand yesterday indicated that a one month course of BLIS K12 probiotic achieves a useful, greater decrease in both Group A Streptococcal (GAS) carriage and GAS sore throats than antibiotics alone. Further analysis of the results are being undertaken and presented early next year.
