THE NATIONAL TRAINING ACADEMY

# Overview

Under the Health and Safety at Work Act 1974, employers have a responsibility to ensure their employees' health and safety whilst at work.

Risk assessments are an extremely important part of this. Knowing how to complete a good risk assessment will help you to identify, prioritise and put risk mitigation strategies in place.

This course is for anyone that needs to carry out a risk assessment as part of their role. The skills learnt will help you to understand different approaches and techniques for risk management and assessment.

## This course contains the following modules:

**Module 1** - The law relating to hazardous substances - In this module you will look at health and safety legislation, COSHH, REACH, RIDDOR, and non-compliance.

**Module 2** - Identifying hazards - In this module you will look at 5 steps to risk assessment, risk assessment techniques, spotting hazards and who might be harmed and how.

**Module 3** - Likelihood and severity of risk - In this module you will look at likelihood of occurrence, severity of risk, risk scores, high risk areas, good housekeeping, prevention, and environmental issues.

**Module 4** - Risk reduction and mitigation - In this module you will look at risk control hierarchy, personal protective equipment, low, medium, and high risk, barriers, reviewing, monitoring, and recording.
