### PLEASE NOTE:

When ordering Mirth Tiles, please keep in mind that because wood is a natural product no two will be exactly alike. We think this adds to the beauty of the floors and gives them character not found in other types of manufactured tiles. Sometimes the variation is more obvious and for this reason we recommend ordering a 5% overage in case some of the tiles do not meet with your approval.

The tiles are designed to be installed with cross grains and due to the tongue and groove construction, this cannot be changed. Depending on the color of the tile it may be more obvious than others. Lighter color tiles show more grain than the darker colors.
