

HOUR METER INSTALLATION

Tools Needed

5/32" Allen Wrench

Scissors

This document will walk you through adding an hour meter to your Mopit Mid.

The purpose of the hour meter is to track overall usage of your Mopit floor scrubber.

FOLLOW THESE STEPS

Step 1. Using scissors, cut the through the wire on top of the hour meter housing. This will activate your new hour meter.

Step 2. Unhook the drain hose from it's metal hook

Step 3. Locate the 5/32" allen wrench on your Mopit.

Step 4. Slide the hour meter behind the drain hose hook and screw into place using the 5/32" allen wrench.

Step 5. Place drain hose back on it's metal hook

Information: Once the wire on top of the meter is severed this meter automatically keeps track of machine run time. It does this by sensing vibration when the machine is turned on.

Cut this wire
