

Glitter Stacker

Product Code: EY10476

These Glitter Stackers are a wonderful independent resource that children can use in a variety of different ways. With their metallic glitter colours they are sure to create a sense of awe and wonder with a treasure trove like experience. They also align to various interests.

- Some children may love to position the bricks, lining them up either on or next to the stacker. This aligns with the positioning schema.
- Children can enjoy sorting the cubes by size and you can support by using mathematical language. You could ask questions such as; which cube is the biggest? How many cubes are in the line? Can you find the smallest cube?
- Children can use these cubes to represent things in their small world play. They may pretend they are magical stones for the wizard or treasure from a sunken ship. They may even become miniature houses or superhero lairs.
- Children can enjoy stacking these cubes with their sparkly, glittery, metallic colours.
- You could enrich children's language by discussing the different colours by using more exciting descriptions such as; violet, emerald, ruby, metallic, glittery, crimson, silver, gold etc.
