

# 2-STEP DISINFECTANT CHECK

Does your surface disinfectant meet the EPA's criteria for use against SARS-CoV-2?

Here's how to find out:

## 1. LOOK AT THE PRODUCT LABEL

The EPA registration number is shown as "EPA Reg. No. XXXX-XX" on the label. Searching by registration number is best, as the brand name of the product may vary.

## 2. Visit EPA.GOV

The EPA offers an easy way to check COVID-19 disinfectants. It's called the [List N Tool](#). You can enter the EPA registration number to find your disinfectant. List N is the EPA's list of products approved for use against SARS-CoV-2, the virus that causes COVID-19.

## IMPORTANT NOTE: EPA & FDA REGULATION

The EPA only regulates disinfectants used on environmental surfaces. The FDA regulates high level disinfectants used on critical and semi-critical medical devices (or tools).
