Protocol

1

PREPARE HEATER

Plug heater into power supply and turn on switch. Turn dial to between (4-5) Place jar of Nufree on top of heater, let product melt into basket.

Pro Tip: Always test temperature of Nufree on yourself before applying to client.

2

APPLICATION

Apply Nufree in the direction of hair growth.

3

EPILATING STRIP

Press down on strip to bond strip to Nufree and pull strip (horizontally and away from the body (not up) to remove hair.

Always hold skin tight when you remove the strip; this decreases pain and removes the entire hair.

Pro Tip: Strips can be torn down to smaller sizes.

4

FINIPIL

Finipil protects the client's skin from infection, irritation, redness, and ingrown hairs. Use after every service and retail for at-home use.

5

ERASING LOTION

Use a few drops of erasing lotion to clean the bar and heater of any drops of Nufree. This can also be used to clean any residue from skin or hair if you make a mistake.

Nufree Pro Waxing Tips

1. Make sure the client fills and signs a "Client Record Form."
2. Sanitize your hands in front of the client. The State Board requires that you do this; therefore, it is an important step in performing a professional Nufree procedure.
3. Always tear a Nufree strip-down lengthwise. Never cut the strip across to make it short.
 - Eyebrows:** Take a Nufree strip and tear it down lengthwise into a strip about one-quarter the size of a whole Nufree strip.
 - Lips:** Take a Nufree strip and tear it down lengthwise into a strip about one-third the size of a whole Nufree strip.
 - Bikini – Brazilian:** Take a Nufree strip and tear it down lengthwise into a strip about one-half the size of a whole Nufree strip.
 - Underarms:** Take a Nufree strip and tear it down lengthwise into a strip about one-third the size of a whole Nufree strip.
4. Take the eyebrow applicator between your pointer finger and thumb. Tap the applicator on the surface of the Nufree to create a raindrop of product on the beveled edge of the applicator. Holding the skin taught to apply the thinnest layer of Nufree possible, it should be transparent on the skin. Apply a full-length strip to the eyebrow. Holding the skin very taught, remove quickly and as close to the face as possible. Continue to hold the skin taught for 3 seconds before letting go.
5. Use the large Nufree body applicators on all areas except for eyebrows.
 - Upper Lip:** Tap the large applicator on the surface of the Nufree, creating a half-moon of product on the tip of the applicator. To apply, hold skin taught by pinching the cheek. Begin application in the direction of hair growth, applying the thinnest layer of Nufree possible. It should always be transparent on the skin. Follow these same instructions for the chin, underarm, and bikini.
 - Leg:** Dip the large applicator in the Nufree halfway, come up against the scraper bar and scrape off one side of the applicator. Flip the applicator over and scrape an inch off the tip. This will ensure that the product stays on the applicator. Apply to the skin as if you were holding a knife and at a 90 degree angle. Apply the thinnest layer possible of Nufree. Follow these same directions for all large areas.
6. There are two types of Finipil, both are patented and FDA registered over-the-counter products that kill 99.999% of germs. **Finipil Pro/Elec**, which is used by the professional in the salon and is put on EVERY customer after a Nufree treatment. An unopened packet is then given to the customer to take home with them. The customer will use a drop of the Finipil Pro/Elec once a day on damp skin. For example, they would use it after they got out of the shower. **Finipil LAIT 50**, is retail for the salon. Finipil LAIT 50 is used daily by the customer, on damp skin, to protect the skin between hair removal treatments. Finipil keeps the empty follicles clean and free-flowing, helping prevent bumps and ingrown hairs.
7. The customer only needs a drop of Finipil to do an area the size of their hand spread out. The customer uses Finipil to protect the skin and empty follicles. Clinical tests have shown that Finipil is an antimicrobial and antibacterial product that kills off 99.999% of harmful bacteria, as well as yeasts and fungi. Thus, keeping the open follicle clean and free-flowing. It also shrinks the follicle wall, bringing back elasticity, and it cleans out sebaceous build-up and ingrown hairs while also preventing new ones.
8. To clean your heater, use Nufree Erasing Lotion. You must clean your unit after every customer with a small drop of Erasing Lotion on a Nufree strip and gently wipe around the edge, rim, and scraper bar of your unit.
