Phone: +44(0)1625 813365 (Monday-Friday, 8am-5pm GMT)

Recommended tools:

Philips screwdriver

Step 1: Looking inside the rear luggage compartment, locate the five novelty plastic screws that are situated underneath both rear side windows. Using the Philips screwdriver, remove the first, third and fifth screws from both sides of the car and set them aside.

Step 2: Screw the supplied threaded eyelets into the holes vacated by the screws on both sides of the car. Tighten the eyelets into position by hand, being careful not to over tighten them. **Please note:** if you have already installed the **Rear Luggage Area Storage Pouch**, you can use the existing eyelets that are fitted during the installation of this product.

Step 3: Unfold the Rear Luggage Area Cover, being sure to keep the side with the zip facing upwards. Begin to clip the cover in place onto the eyelets.

Step 4: Once all six clips are secure, you can begin to tighten or loosen the straps accordingly. Beware of over tightening the straps; this will make it difficult to unclip the Luggage Area Cover when you wish to move it. We recommend keeping the straps slightly slack, but not so much as to prevent the Luggage Area Cover from retaining its shape.
