

TESTIMONIALS

"Skinuva® Scar is a really amazing scar cream, it changed my scar so much more than I ever imagined. In just a month, I began to notice that my scar became **softer and lighter**. It really helped **improve the thickness of the scar** too. I never thought that a scar cream could be this good!"

-Iris M.

"Skinuva® Scar was surprisingly easy to use and **I noticed my scar fading by the first month**. I've been using the cream now for 3 months, and I'm still noticing improvements. I would most certainly recommend this to my friends and family who have scars from surgery."

-Heidi S.

SELECTIVE SYNTHETIC
GROWTH FACTORS

**Clinically proven to be more
effective than silicone cream by
over 70%**

DEVELOPED AND TESTED
BY PHYSICIANS

WE HEAL SCARS BETTER THAN THEM, AND HERE'S WHY

Unmet need in current topical scar therapy

There has been a lack of advancement in silicone creams since their introduction in the 1990s. Skinuva® Scar is revolutionizing the way scars should be treated. It uses selective synthetic Growth Factors and other clinically proven ingredients in its formulation.

This knowledge was crucial in the development of Skinuva® Scar

Scar-free healing has been shown to occur due to a selective set of Growth Factors. By utilizing such knowledge, Skinuva's team of physicians and scientists formulated its first product in its Growth Factor Pipeline: Skinuva® Scar.

SKINUVA[®] scar vs. COMPETITORS

ABDOMINAL SCAR

BEFORE

AFTER 6 MONTHS

5 clinical studies have shown that Skinuva® Scar improves the appearance of scars nearly **2x better** when compared to silicone cream. Our recent double-blinded, randomized multi-center study comparing Skinuva® Scar to silicone cream is now in ***Aesthetic Surgery Journal***, the most widely read aesthetic surgery journal in the world!

Skinuva® Scar works best on younger scars, ideally within a few weeks to months after surgery. Scars usually mature by one year, so the sooner the cream can be applied, the more likely patients will see results. Skinuva® Scar should be applied twice a day, for a minimum of 3 months on new scars, but can be used up to one year. Sunscreen may be worn over Skinuva® Scar.
