

SKINUVA®

scar

REVOLUTIONARY SCAR CREAM FORMULATION USING HIGHLY SELECTIVE GROWTH FACTORS

*The next generation scar cream backed by **5 peer-reviewed medical journal publications**

*First and only scar cream that uses selective **synthetic Growth Factors**

*Clinical studies show up to **73% improvement** in the appearance of scars by the third month of use

*Large multi-center study showed up to **two-fold improvement** in appearance of scars with Skinuva® Scar in a head-to-head comparison with silicone cream

WE HEAL SCARS BETTER THAN THEM, AND HERE'S WHY

Unmet need in current topical scar therapy

There has been a lack of advancement in silicone creams since their introduction in the 1990s. Skinuva® Scar is revolutionizing the way scars should be treated. It uses selective synthetic Growth Factors and other clinically proven ingredients in its formulation.

This knowledge was crucial in the development of Skinuva® Scar

Scar-free healing has been shown to occur due to a selective set of Growth Factors. By utilizing such knowledge, Skinuva's team of physicians and scientists formulated its first product in its Growth Factor Pipeline: Skinuva® Scar.

SKINUVA® scar vs. COMPETITORS

- ✓ Highly effective Growth Factors
- ✓ Hyaluronic Acid
- ✓ Silicone Cream
- ✓ Aloe Vera
- ✓ Centella Asiatica
- ✓ Vitamin C
- ✓ Sunscreen can be applied over

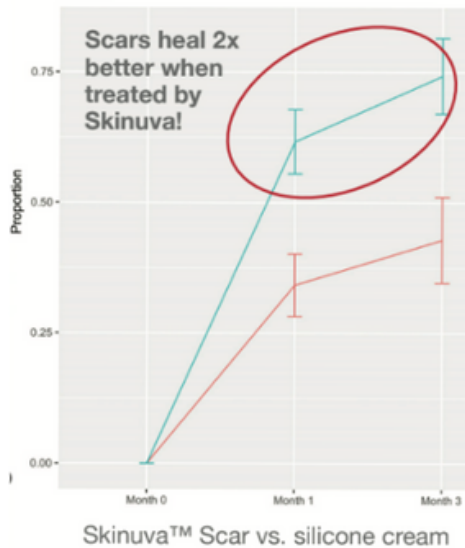

- ✓ Silicone Cream/ Gel
- ⊕ Sunscreen

Now back by 5 clinical studies that show we are nearly 2x more effective than silicone cream

Gene expression study Collagen Type I to Type III Ratio

A better healing scar should have a decreased Collagen Type I response, increased Collagen Type III response, and a decrease in the Collagen Type I/III ratio.

CLINICAL STUDIES

- 5 publications supporting safety and efficacy of Skinuva® Scar
- Head to head multi-center double-blinded study comparing Skinuva® Scar to silicone cream shows that Skinuva is nearly **2X more effective** than silicone cream, published in **Aesthetic Surgery Journal!**
- Genetic expression data showing that Skinuva® Scar treated scars **heal with better collagen response** in comparison to scars treated with silicone cream, published in **Scars, Burns, and Healing Journal**.
- Skinuva® Scar has shown to be safe and effective for post-CO2 lasers, **published in ASLMS, 2020 National Conference**.

Skinuva® Scar works best on younger scars, ideally within a few weeks to months after surgery. Scars usually mature by one year, so the sooner the cream can be applied, the more likely patients will see results. It should be applied twice a day for a minimum of 3 months on new scars, but can be used up to a year.

Sunscreen may be used over Skinuva® Scar.
