## PIPRD.com Custom Design Tool Instructions

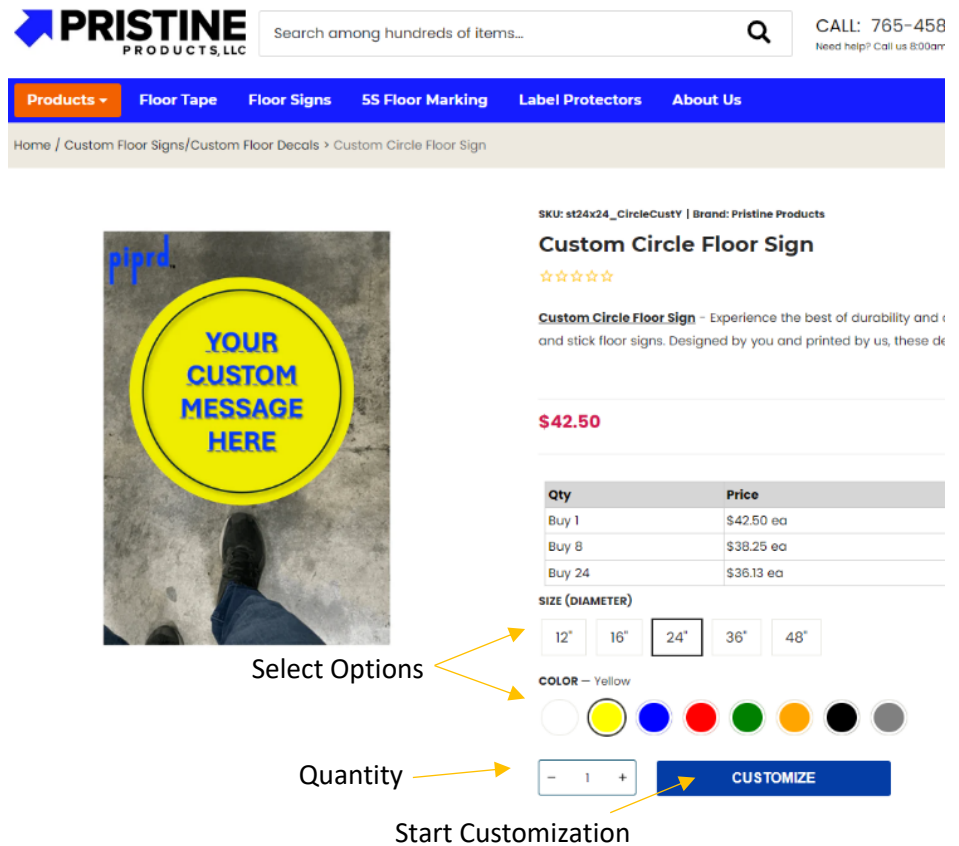

### Online Design/Customization Tool Guide:

#### 1. Select Product –

Once you've found the item you want to customize, select the product. Then select the variant options that best fit your needs. Input your quantity and click CUSTOMIZE

In this example, we'll select the 24" size and yellow color option, as shown in the image.

Note: Variant options can be changed within the design tool.

#### 2. Add Text –

Select the text icon on the menu or toolbar.

Within the text menu, use the top box to enter your text. Use the enter key to start a new line of text.

Add Text

Below the text box, select the font and special effects – bold, italics, stroke (text outline), color, and curve feature to give your message more pop.

Change the text alignment and spacing as desired. You can change the font size using the dropdown or on the graphic as explained below.

On the four corners of the text box over the graphic there are four icons. Top Right is rotate, bottom right is text size, top left is move. To adjust any of these, click and drag to your desired size or position.

Delete the text box using the trash can symbol on the bottom left. You can duplicate the text box using the “Duplicate” icon on the toolbar, or add a new text box by selecting “Add New Text”.

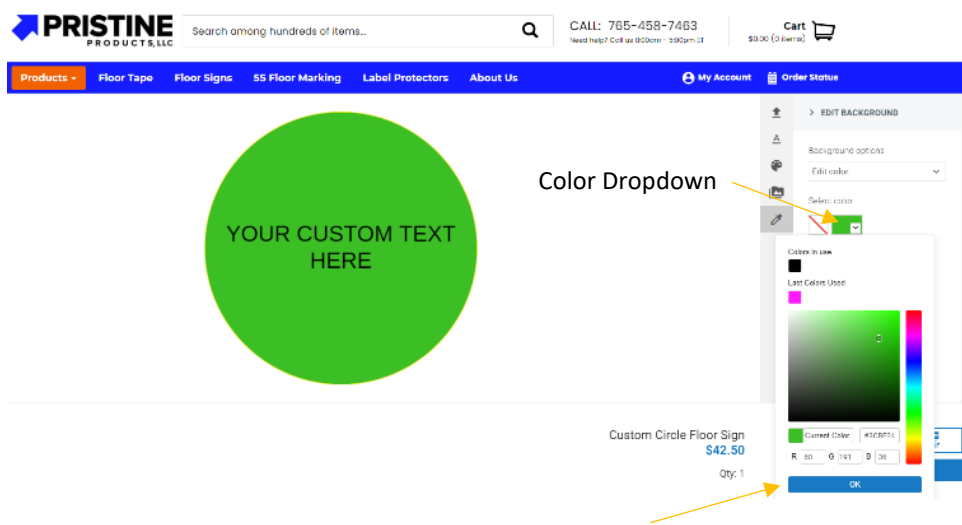

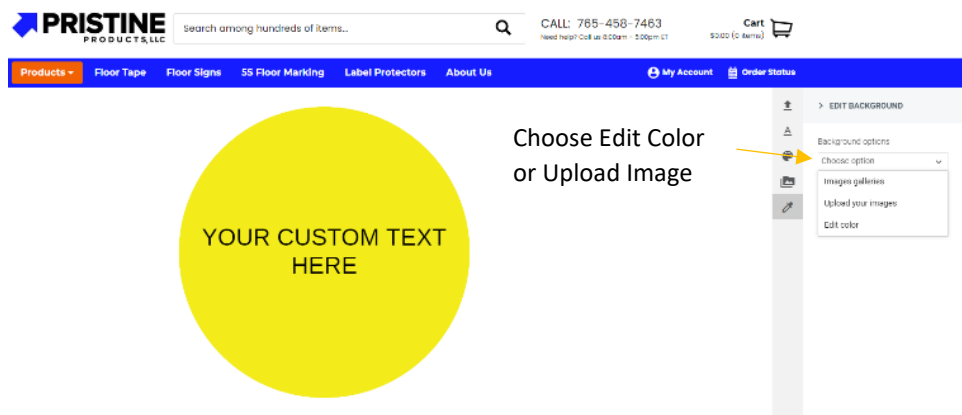

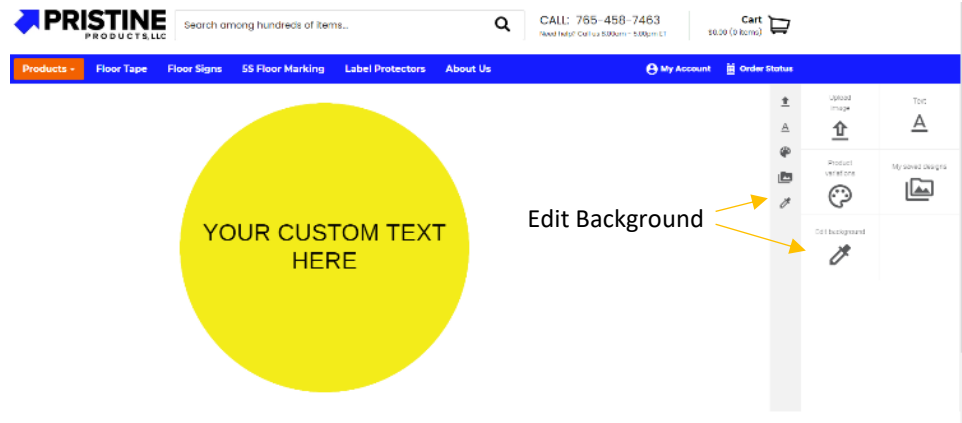

### 3. Edit Background-

To edit the background, Select the Edit Background tile on the menu or the marker on the toolbar. Note some products may not have this option.

Use the dropdown to select "Edit Color" Or use the "Upload your image" to have an image as your background. There are other ways to add images which will be covered in the next section.

If you'd like to change the background to a custom color, select edit color and use the dropdown arrow to open the color gamut. Use the color scale to select your color or enter the desired HEX, or RGB color code. Click OK.

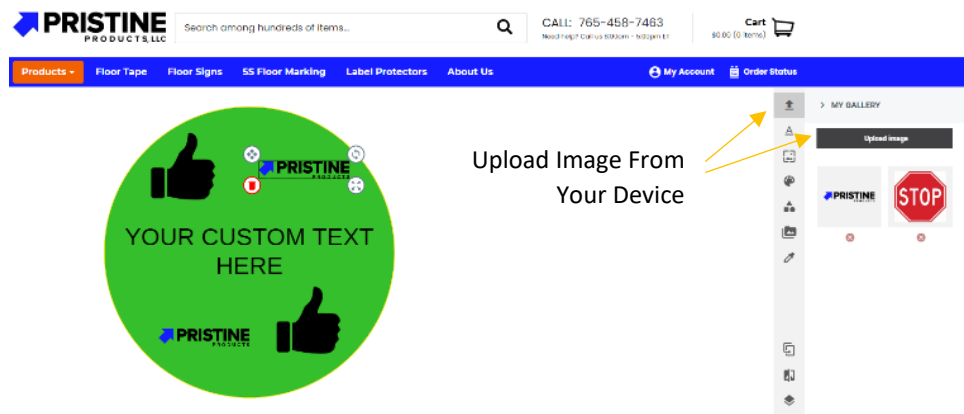

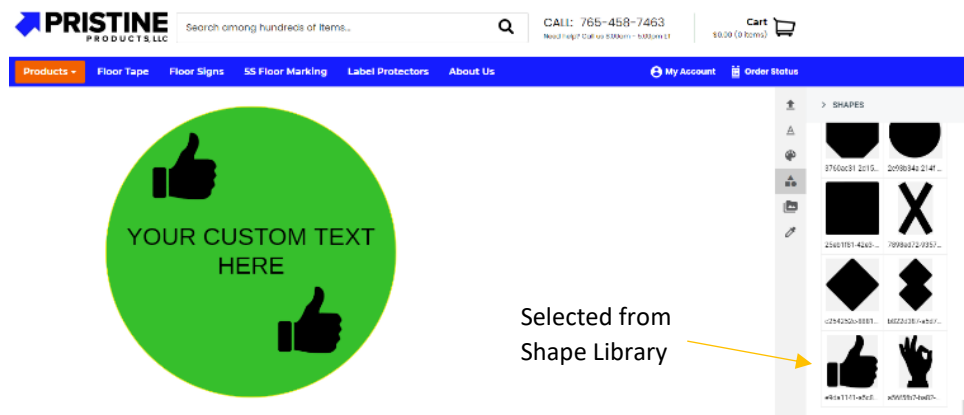

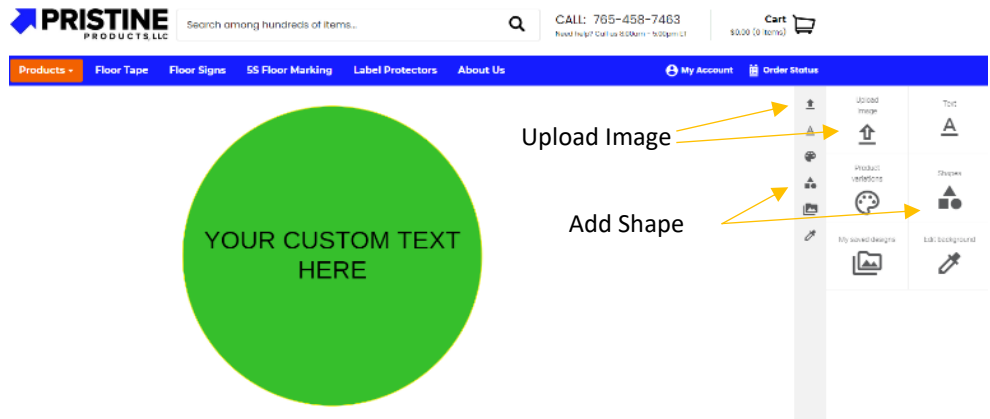

#### 4. Add Shapes and Images –

To add a generic shape or image from our library select “Shapes” on the menu or the shapes on the toolbar. To add your own art, select “Upload image” on the menu or up arrow on the toolbar.

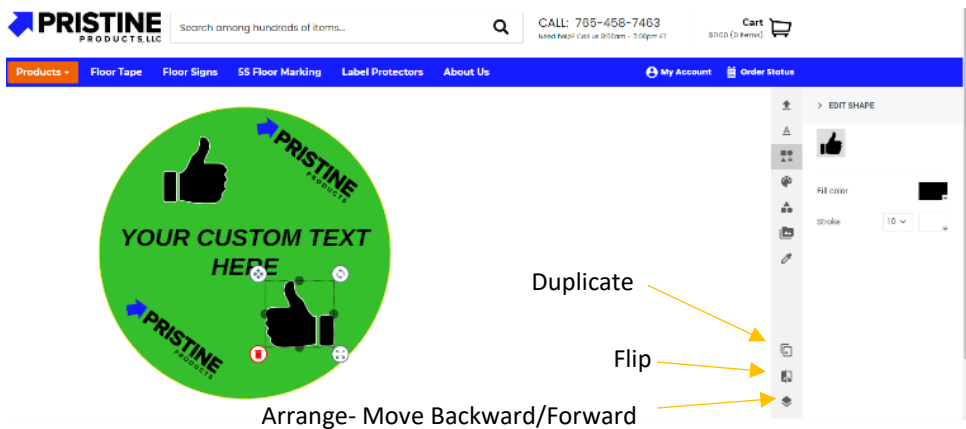

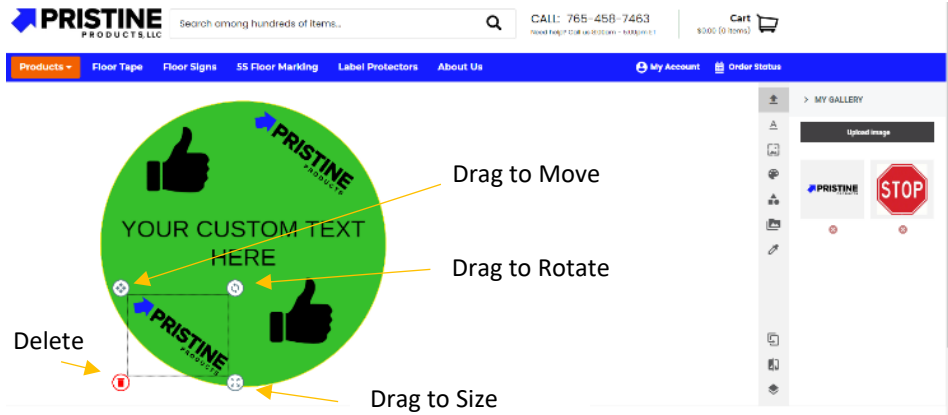

Within “Shapes” is a library of common pre-loaded graphics. Scroll through to find the shape or graphic you need. Once placed, select color using the Fill Color dropdown on the Edit Shape tab. Use the Stroke options to add an outline.

To add your own art within “My Gallery” click upload image from your device. This will open your device files. Select the image to upload. The image may take a few seconds to upload and will appear when complete.

For selected shapes or images, use the options in the corner of the box to size, rotate, move, and delete (same functions as text).

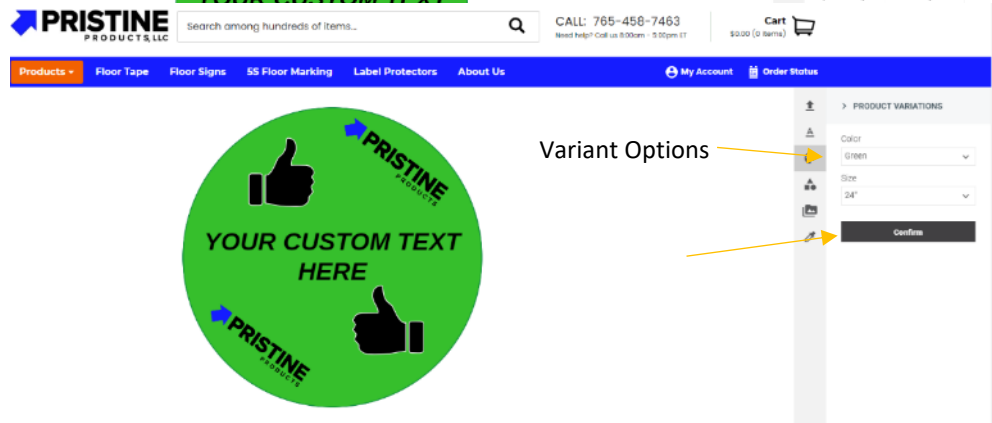

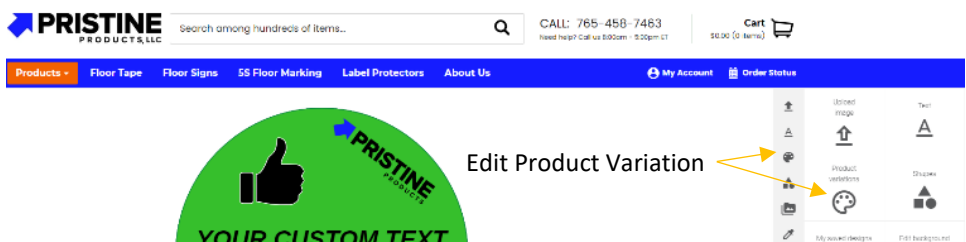

To duplicate any images, shapes, or text, use the Duplicate button on the bottom of the toolbar. Also at the bottom of the toolbar is a flip button and a rearrange button to bring selected elements to your design to the front or to the back.

## 5. Change Variants-

To change your selected variant (i.e. size or color), select Product Variations, or the paint palette on the toolbar. Use the dropdowns to edit variations. Note- this may change the scaling of your original art and may require further edits.

Click Confirm to make change.

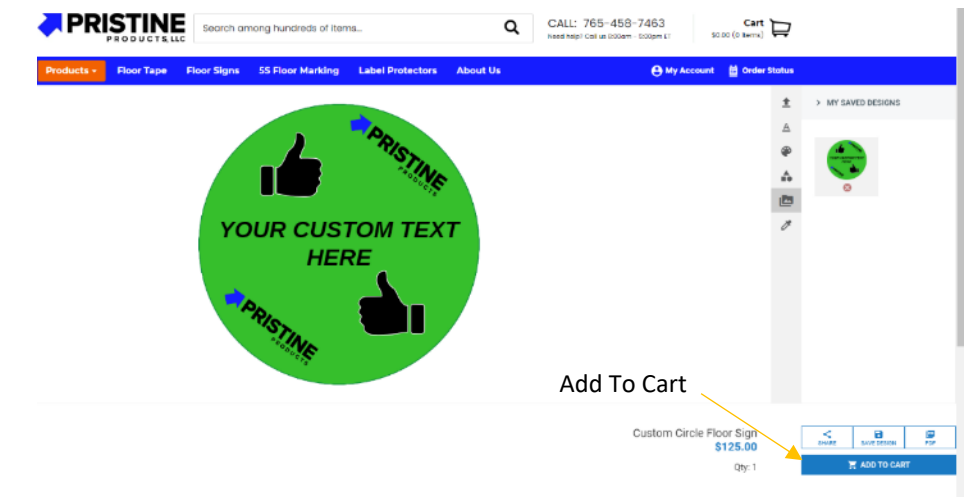

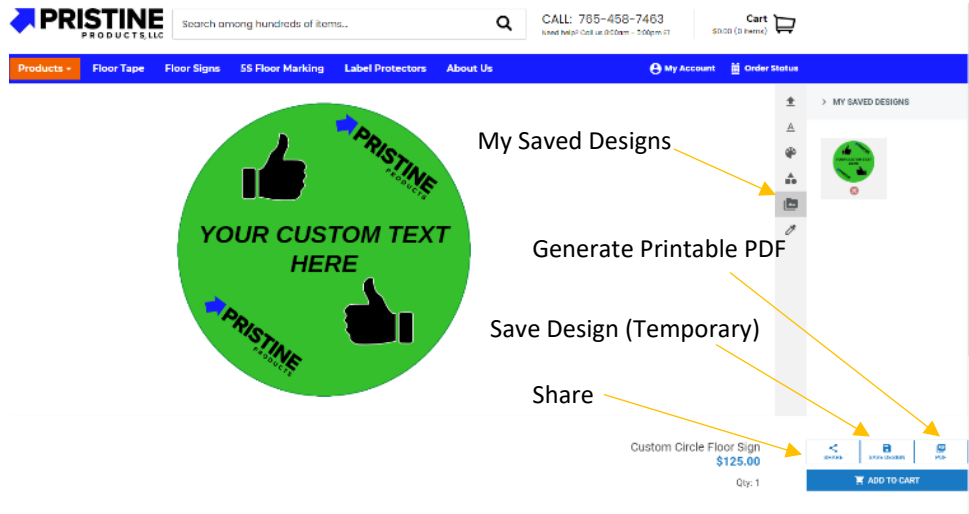

6. Share or Save-

Use the three buttons above the Add to Cart button to Share, Save & Preview your design.

The Save Design feature will temporarily save the design you made. Designs do not save across devices and are cleared when browser cookies/cache are cleared. Saved art can be found in My Saved Designs

PDF feature creates a small-scale file of your design for quick printing. This is a great way to check your graphic and show others.

Select Add to Cart to start your order.

7. Checkout -

Once you've Added to Cart, you can update your quantity and start your secure checkout or keep shopping.
