

The Power of Nanotechnology

The Best Natural Pet Line

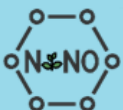

Traditional pet shampoos, flea & tick treatments, deodorizers and disinfectants place your pets in constant contact with extremely harmful pesticides.

According to a study by the Environmental Working Group (EWG), dogs and cats were contaminated with 48 of 70 industrial chemicals tested, including 43 chemicals at levels higher than those typically found in people.

The use of chemicals accomplishes a more efficient job than traditional natural pet products, however it greatly affects your pet's health. Whereas traditional natural pet products are healthy but aren't nearly as efficient. That is where EcoSpaw comes in, combining the best of both worlds and making it even better.

EcoSpaw is revolutionizing the pet industry and we want you to be a part of it!

The Power of Nanotechnology

The Best Natural Pet Line

One of the differences between our products is that each one has different concentration blends in ingredients and enzymes which allows us to target specific functions (such as attack chitin in insects, or specific oils in stains).

For example, our Stain & Odor has a stronger blend that targets specific oil types related to the strongest stains and odors while still able to perform all other features of the pet shampoo. On the other hand, our shampoo focuses more heavily on dirt and oil molecules while performing other features at the same time.

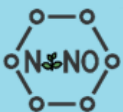

How is all of this possible?

How come competitors natural and non-toxic traditional pet products are not as strong as chemical products?

How come they can't perform all of the tasks simultaneously?

The answer is simple: Nanotechnology

The Power of Nanotechnology

The Best Natural Pet Line

Why Choose EcoSpaw?

- Protect your pets and children from accidental poisoning
- Protect yourself from toxins, even harmful cancer-causing chemicals
- Protect indoor air quality of home or business
- Protect the earth from contaminated environment and polluted water tables
- Have the best of both worlds. Forget chemical or ineffective natural products
- Utilize ALL NEW features never seen before!

Welcome to the Future of Clean: Welcome to EcoSpaw

Note: The information contained herein is true and correct to the best of our knowledge and belief based on years of empirical evidence and controlled laboratory testing. EcoSpaw users should perform their own tests for specific applications.
