

How to Install Your Alto Visor by PahaQue Custom Shop

Thank you for purchasing the Alto Visor, another quality product Built in the USA by PahaQue Custom Shop. This product will provide you with years of service, and is backed by our Lifetime Warranty against any and all defects in materials and workmanship. When used and cared for properly, this product will provide many years of reliable service.

A FEW QUICK NOTES:

- **SET-UP**----Your Visor can be easily set-up in 5 minutes or less by one or two people, if you follow the basic sequence detailed below. If time allows, we would recommend that you read through these instructions in their entirety and do a practice set-up at home before heading into the wilderness. Then you can be sure all components are present & functional, and proceed through the set-up sequence at a leisurely pace to learn the most efficient techniques.
- **TAKE DOWN** --- For the take down, simply reverse the set-up sequence.
- **LONG TERM STORAGE** --- Your Alto Visor is more likely to be damaged by mold, mildew or bacteria during storage than by elements while set up and in use. Make sure that all food or other organic material is removed, and that your tent is thoroughly dry before packing into the stuff bag. If you have to pack up and leave the campsite while your tent is damp, set it up later at home & allow it to dry thoroughly for long-term storage. Damage due to mold is not covered by warranty.

Alto VISOR SET-UP PROCEDURE

1. Remove the Visor and fiberglass pole from the storage bag. Unroll the Visor and locate the keder (cord) edge that slides into the keder rail on your trailer.
2. Connect the sections of the fiberglass pole to create one long, straight pole. Locate the opening in the end of the pole sleeve, and insert the pole completely through the pole sleeve. This is most easily done on the ground with the Visor body up-side-down. The slit that the pole goes through is on the bottom side. Note that there will be a good deal of tension on the pole and Visor body when inserted.
3. Turn Visor right-side-up and begin inserting the keder cord through the keder rail on your trailer.
4. Once the Visor is fully inserted into the keder rail, adjust its position by sliding right or left until it is centered over the trailer side.
5. Locate the two pre-attached guy lines on the outer edge of the awning. Notice that each guy line has a section of keder cord sewn onto the end. Unravel the guy lines, and insert the section of keder cord into the bottom keder rail on your trailer on both sides of the trailer door.
6. Next, locate both adjustable awning poles, pole pockets, and keder rails. Remove adhesive backing covering from keder rails and affix along bottom edge of trailer. Exact placement will vary from trailer to trailer. You may further secure the keder rails with flathead screws if necessary. Slide the pockets into these rails and insert the bottom of the awning poles into the pockets. (See photo)

7. Lastly, adjust the tensioners on each guyline so that the Visor is snug and held in place securely by the guy lines. For further instructions on how to use the guy line tensioners, please see the User Tips page (included).

For additional information, to register your product, or for warranty info please visit www.pahaquecustom.com.

The effects of wind and rain on the Visor are unpredictable. Damage to the trailer and/or Visor may result. Please remove the Visor in heavy wind or rain. Damage due to weather is not covered by your warranty.
