Long Term Men's Health Solution: Virilast®

Virilast® is the first and only clinically proven, patented, all natural, safe, and effective botanical compound to prolong time to ejaculate and to improve quality of orgasm, along with better and stronger erections.

Virilast® stands out because:

It is well suited for diabetics, as well as men taking nitrates or alpha blocker drugs where Sildenafil is contraindicated. Virilast® can be a stand-alone supplement or added to other actives in the Men's Health and healthy aging categories

It can help decrease dependency on synthetic products and boost libido when taken with physician-prescribed Sildenafil and similar drugs, which can only work in the presence of good libido

Male sexual health can be a complex problem involving varying degrees of erectile dysfunction (ED), premature ejaculation (PE), and low libido. Hence, there is a need for an option that can simplify the first steps towards improving male sexual health. Virilast® is that simplifier.

Being a chemical-free, safe, and holistic solution, Virilast® benefits typically build slowly, showing results in 15 days

VEGAN & NON-GMO and Prop 65 compliant

It is a US patented blend of 7 Ayurvedic extracts containing Ashwagandha & Shilajit which are known potent adaptogens

Ingredients in Virilast® that Combat Stress, Anxiety that Help Enhance Libido

One of the most common reasons for declining sex drive and poor sexual performance is stress. Virilast® could have an influence on the physiological functioning and integration of numerous processes that go into the satisfactory sexual functioning of men. This is especially warranted in conditions like depression and anxiety, where co-existing forms of MSD often masquerade each other.

The US-patented blend has ingredients that ensure all-round improvement in the quality of sexual functioning.

Asparagus and Shilajit: Possess anti-stress properties which help improve libido

Ashwagandha: A well-researched potent adaptogen. Proven to reduce stress and anxiety thereby increasing sexual desire

Gold Standard & Largest Clinical Study for Men's Health Supplements

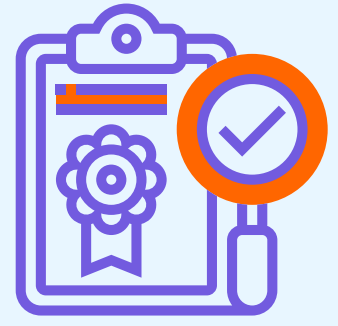

Virilast® has the **largest human study** published in this category, captured & analysed for efficacy and safety

148
subjects

60
days

11,600
data points

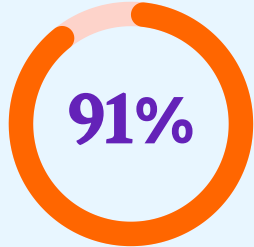

Studied using the International Index of Erectile Function (IIEF) and Index for Premature Ejaculation (IPE), the **same gold standard tools** as used by Viagra

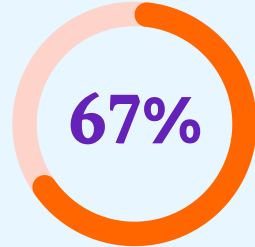

Benefits are proven across **adult male age group of 21 to 60 years**

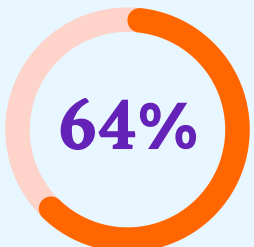

Only men's health study to demonstrate **female partner satisfaction**

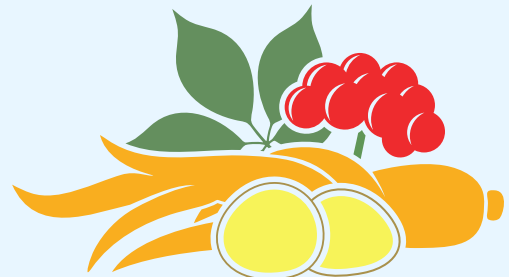

As high as **91%** of men using Virilast® in this study confirmed **"desire to continue"**

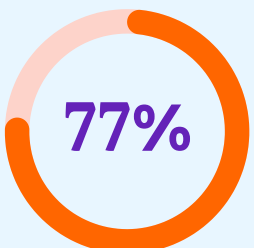

Significant improvement in **erectile function** vs. 26% in placebo

Significant improvement in **time to ejaculation** vs. 25% in placebo

Superior to trials of other male sexual health ingredients like Korean Ginseng, Yohimbine, Testofen, etc. due to larger study population, highly validated IIEF & IPE scales used, adverse-effects extensively monitored, and intention-to-treat (ITT) way used for analyzing data which removes "bias".

Improvement in **partner satisfaction index** vs. 61% subjects taking placebo

Virilast® truly stands out as a safe, effective, substantiated, and unique option for men's sexual health.
