**Instructions**

**STEP ONE**
Place the claw over the centre of the weed. This is important as you want to remove all of the roots.

**STEP TWO**
Press down on the foot peddle until it is level with the grass.

**STEP THREE**
Pull the Weed Puller away from the weed on to the foot peddle. This will close the claw around the weed.

**STEP FOUR**
Continue to lean the handle of the Weed Puller back until the weed has lifted from the ground.

**STEP FIVE**
Hold the green rubber grip on the handle and push down to open the claw and eject the weed.

---

**TOP TIP**
Rinse or wipe the claws clean after use to prevent any dirt building up inside the mechanism.
