Lighting Mode

Dim Light with sensor mode – continuously emits a dim light (6LEDs) from dusk until dawn, with a bright light for 15-20 seconds when motion is detected.

Product Installation

Follow these steps to mount to the wall or fence using the supplied plugs and screws:

**Step 1 - Find a suitable location**

Solar lights need access to direct sunlight, preferably 6-8 hours per day. The motion sensor will detect movement up to 5m away.

**Step 2 - Mounting the solar light**

Use a 6mm drill piece for masonry installation. Gently hammer the plugs into place and then secure the screws tightly. For timber drill a 3mm pilot hole to guide the screws into place (Plastic plugs are not required).

**Step 3 - Turn on the light**

To activate the light, turn on the switch on the side of the unit. Turn this on to desired setting. Test by covering the solar panel completely to check that the light comes on. The light is now ready for use.

**Note:** If the light does not turn on this could be due to the battery not being charged. Leave out in direct sunlight for 6 – 8 hours and try again.
