User Manual

MODEL: 5518-WG 15m Misting Kit

HOSELINK

This fully customisable kit allows you to install 8 misting connections at desired points along the hose to suit your greenhouse, garden bed or outdoor entertaining area. The misting kit can be used for watering in greenhouses, veggie patches or for cooling outdoor areas such as chicken coops and patios. Each misting head is adjustable, so you can easily aim the head in the desired direction.

KIT CONTAINS

- 1x 15m PVC Hose
- 1x Hoselink Accessory Connector
- 7x Pass-through Misting Nozzles
- 2x End Misting Nozzle
- 2x 'L' Joint Hose Connectors
- 2x 'I' Joint Hose Connectors
- 1x 'T' Joint Hose Connector

TIPS

Entertaining Areas:

For ultimate convenience, we recommend using the 15m Misting Kit in conjunction with a specialised timer featuring adjustable short misting intervals, so you can alter spray frequency for cool relief without getting too wet. As the misting heads will drip a little when water stops, it is best to position the misting heads around the outside of where quests will be seated.

Greenhouses

Point misting nozzles towards plants for maximum benefit.

Water Pressure:

This system requires LOW water pressure. Only turn tap on slightly during use. High pressure may result in burst hoses, which will void the warranty.

INSTALLATION GUIDE

Lay the hose out where it will be required.

Start at the water inlet by connecting the black Hose End Connector to the PVC hose. Do this by unscrewing the grey cap and placing it over the end of the hose. Then, push the black Hose End Connector on to the hose and tighten the grey cap to secure.

Screw the Hoselink Accessory Connector into the black Hose End Connector.

Decide where the first mister will be located and cut the hose. Connect a Pass-through Misting Nozzle – unscrew the grey cap, place over the hose end, then push the mister into the hose and tighten the grey cap to secure. Repeat on the other side.

Repeat this procedure for the remaining Pass-through Nozzles or Hose Connectors at every point where you want to locate

At the last point where you want a mister, install the End Misting Nozzle. This part is both a mister and stopper at the end. If using the 'T' joint Hose Connection make sure to install the second End Misting Nozzle on this section of hose.

Secure the hose using the supplied Nail U-clips and Hanging Snap Clips. If neither of these are suitable, cable ties (not supplied) also work well.

You can now connect to your water supply.

TROUBLESHOOTING

Due to the very small diameter opening in the Misting Heads, they may become blocked. If so, Misting Heads can be unscrewed and cleaned. We recommend soaking them in a white vinegar and water solution overnight to help break down any blockages or calcium build up.
