

HOSELINK

The Weeper Hose takes away all the manual work involved in watering your garden! Through gradually weeping water directly to your soil and close to plant roots, the hose reduces water wastage and minimises evaporation.

Kit Contents

1 x 7.5m or 15m Weeper Hose 1 x Hoselink Accessory Connector

Using the Soaker Hose

- 1. Lay the hose in a straight line or in gentle curves along the ground, ensuring there are no sharp turns or corners that could disrupt the Weeper Hose.
- 2. Connect to a Hoselink-fitted garden hose.
- 3. Set at a low water pressure.

Note 1: If you do not have a Hoselink hose, you'll need to convert to Hoselink's hose fittings, or remove the Accessory Connector and use a male click-on connector.

Note 2: The Weeper Hose is best used above ground or under a thin layer of mulch – ensure that it's not buried under soil.

Extending the length

For a longer length, two weeper hoses can be connected together. Cleverly designed with an internal thread at one end and an external thread on the other, by removing the Hoselink Accessory Connector and stop cap, the two lengths can then be connected.

Note: We advise connecting no more than two 15m Weeper Hoses together to avoid water pressure issues from occurring.

Replacement Parts Available

Clamps and screws.

Please contact the Hoselink Customer Care team directly to arrange replacement parts.
