User Manual

Hoselink Automatic Tap Timer
Model: 5836

Requires 2 x AA batteries (not included)
Installation

Insert 2 x AA batteries by opening up the cover on the back of the unit. Afterwards, press the cover down until flush with the timer casing to ensure a watertight seal.

Comes with both a $\frac{3}{4}”$ and 1” tap thread. Screw directly on to the garden tap and proceed to set up.

The LED screen will turn off when not in use to prolong battery life. To re-activate screen, press any button on the timer.

Set Up

After the batteries are placed into the timer unit, a default screen will appear. Press the ‘SETUP/OK’ button and configure timing using the ‘plus (+)’ and ‘minus (-)’ buttons. Then, once the correct times are entered, press the ‘SETUP/OK’ button to confirm and move on to the next setting.

**Current time** – Clock is 24hrs.

**Start time** – Time of day you want the timer to activate watering.

**How long** – Time in seconds/minutes you want the unit to water for (ranges from 1 second to 300 minutes).
**How often** – Frequency of watering (ranges from every 1 hour to 15 days).

**Next irrigation** – This field cannot be changed. The number displayed in this box outlines when the next watering cycle will commence.

**Rain Delay:**

If it is raining or forecast to rain, there is a ‘RAIN DELAY’ button. Simply push this button and a raincloud icon will flash to show this setting has been activated. It will now skip the next watering cycle. To cancel the ‘RAIN DELAY’ setting, press the ‘RAIN DELAY’ button again and it will revert back to the original watering setup.

If you would like to manually water, click the ‘MANUAL’ button and select how long you want to water manually for (ranges from 1 second to 240 minutes). To cancel this setting, click the ‘MANUAL’ button again. Watering will reset to the original cycle.

To turn the timer off, press and hold the ‘ESC/OFF’ button for 3 seconds or until ‘OFF’ shows up on the screen. To reactivate, press and hold the ‘ESC/OFF’ button again.
Recommendations

• We recommend you check the battery indicator before going away on holiday. It is a good idea to put new batteries in the timer in case the battery runs flat OR have someone available to check on the timer whilst you are away.

• Do not submerge the product under water.

• When expecting freezing temperatures, remove the timer from the tap and store inside to prevent water freezing inside the unit.

• Check the tap filter every so often to ensure no blockages occur. To do this, unscrew the timer from the tap and remove the washer to clean the filter inside.
