Lighting Modes

Main Light - Multiple colours fade in and out. Gradually switches between red, yellow, green, blue, pink and white.

Auxiliary Light - Emits a high beam in cool white.

Main Light and Auxiliary Light - Emits a high beam in cool white whilst multiple colours fade in and out.

Product Installation

Step 1: Find a suitable location

Solar lights need access to direct sunlight for optimum results, preferably 6-8 hours per day. Loosen the nut to adjust the angle and tilt of the solar panel for maximum sun exposure. Re-tighten to secure.

Step 2: Assemble the ground spike

Assemble the two ground spike components, then push into the base of the light. There are nuts on the spike, light and solar panel, allowing you to adjust the direction of each component to suit.

Step 3: Turn on the light

To activate the light, turn on the switch located on the back of the unit. Test by covering the solar panel completely to check that the light comes on. The light is now ready for use.

Note: If the light does not turn on this could be due to the battery not being charged. Leave out in direct sunlight for 6–8 hours and try again.
