

Special Instructions for Winn Wrap Grips

Important: All wrap style grips by Winn Grips need to be carefully installed. They must be installed using the traditional method with grip tape + solvent (or mineral spirits). They cannot be installed using the air compressor method.

Instructions:

- 1) Watch this video: <http://www.winn grips.com/grip-replacement>
- 2) Use plenty of solvent to lubricate the grip and shaft.
- 3) Slide the grip on straight onto the shaft. Any bending will cause the wraps to separate.
- 4) If you have any questions, please contact us at: help@grips4less.com

Disclaimer: Winn will not replace improperly installed grips. Grips4less is not responsible for improper installation.
