

LED Liquor Bottle Display Shelf

Solid Wood Design with RF Remote

We build our LED shelves with professional bartenders and home bar enthusiasts in mind. Our products are made with attention to detail, quality, and dependability. We use HPL, one of the most durable surfaces on the market, with dimensionally stable MDF for the base structure, and high-quality acrylic for the shelf surface.

These shelves are solidly built and incredibly stable, but this is only the foundation for the other great features included. Keep reading to learn more!

- Durable 6mm Acrylic
- . High Quality LED Lighting
- · Reliable RF Remote
- · Multiple Finish Options
- · Handcrafted in the USA!

BARS

Why choose BarProducts?
Created in 1995 with one goal in mind, to build a business "by bartenders, for bartenders."

We know what it takes to run a successful bar, and what it costs. This is why we offer quality products to meet the needs of bars, restaurants, clubs, and more!

Durable 6mm Acrylic Stronger shelf, better lighting!

We use a thick 6mm acrylic for a more durable, long-lasting shelf that can take years of wear and tear. We also use acrylic with a milky white translucency throughout the material, instead of just a frosted surface. It allows for more even and consistent light diffusion across the entire surface. You get a stronger shelf with better lighting!

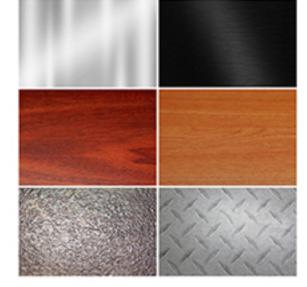

High-Quality LED Lighting Don't settle for inferior LEDs!

Consistent and reliable brightness is important in an LED shelf, and that is why we use high-quality LEDs. The placement is carefully designed to maximize brightness and consistency. We then install them as one single strip to minimize the potential of component failure from connectors and solder joints.

Custom RF LED Controller No line-of-sight required!

We use RF remotes with our products because they have a greater range than IR and Bluetooth technology, plus they can transmit signals through walls and other objects. These features and an easy-to-use, compact, 24-key design provide you with a convenient and reliable experience when you need to adjust your LED Shelves.

Multiple Finish Options More than just gloss black!

Our manufacturing process allows us to provide a variety of virtually seamless finishes in resilient and easy-to-clean HPL. Choose from gloss black, polished aluminum, aged bronze, or a variety of wood textures. Our attention to detail means you'll see fewer joints and seams, giving you a more professional presentation.

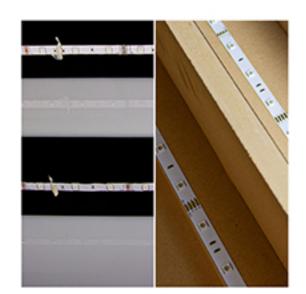

Handcrafted in the USA!

All of our wood products are created in our USA-based woodshop, where we constantly innovate and develop new products to meet your needs! From choosing the best materials to safely shipping out your product, we focus on care, quality, and consistency.

Parts are precision machined and prepared out of dimensionally stable MDF, resilient and stylish HPL, and thick, durable, and easy-to-clean acrylic. We use an eye for detail in every part of the assembly, from the wood base to the electronics, to deliver the best possible product.

We create a quality display shelf truly fit for professional commercial use. It's sturdy, stylish, and tailored to fit the needs of your bar, club, restaurant, or home bar.

Other LED Shelves

Bar Products LED Liquor Shelevs

We use the finest LED strips that have 6 emitters in one strip to produce a brighter and more vibrant visual for your bar, unlike other LED shelves that only include 3 emitters in one strip. Our shelves also include our own custom Bar Products controllers and remotes to entail a higher quality experience with our shelves. The custom controller provides a wider range of motion to be able to change the color, turn it on or off, and change the brightness anywhere you would like. The shelves are also structured around the LED strip with a specially made stand to center the strip to give an clean, even, and bright look to each shelf. Unlike other LED shelves that glue their strips to the side or on the bottom of the structure that gives an uneven and dull look.

Other LED shelves make theirs out of low-grade acrylic and wood that won't hold in fast-paced environments like a bar or club. Far from our LED shelves, they are built with high-quality materials to ensure a long-lasting and strong shelf at your commercial bar or home bar!
