The Owner's Manual contained the latest information for this model series at the time of publication. However, minor differences due to further developments in design cannot be ruled out completely.

All specifications contained herein are non-binding. KTM Sportmotorcycle GmbH specifically reserves the right to modify or delete technical specifications, prices, colors, forms, materials, services, designs, equipment, etc., without prior notice and without specifying reasons, to adapt these to local conditions, as well as to stop production of a particular model without prior notice. KTM accepts no liability for delivery options, deviations from figures and descriptions, misprints, and other errors. The models portrayed partly contain special equipment that does not belong to the regular scope of supply.

1.1 Symbols used

The meaning of specific symbols is described below.

- ✓ Indicates an expected reaction (e.g. of a work step or a function).
- × Indicates an unexpected reaction (e.g. of a work step or a function).
- ⚙ Indicates all work marked with this symbol requires specialist knowledge and technical understanding. In the interest of your own safety, have these jobs performed by an authorized KTM workshop! Your motorcycle will be optimally cared for there by specially trained experts using the auxiliary tools required.
- ✅ Indicates a page reference (more information is provided on the specified page).
- ❚ Indicates information with more details or tips.
- V Indicates the result of a testing step.
- A Indicates a voltage measurement.
- Æ Indicates a current measurement.
- ◄ Indicates the end of an activity, including potential rework.

1.2 Formats used

The typographical formats used in this document are explained below.

2 SAFETY ADVICE

2.1 Defined use
The vehicle is designed and constructed to withstand the usual demands of regular traffic and use on gentle terrain (unpaved roads). This vehicle is not suitable for use on race tracks.

Info
The motorcycle is only authorized for operation on public highways in the homologated version.

2.2 Misuse
The vehicle must only be used as intended. Dangers can arise for people, property and the environment through use not as intended. Any use of the vehicle beyond the intended and defined use constitutes misuse. Misuse also includes the use of operating and auxiliary fluids which do not meet the required specification for the respective use.

2.3 Safety advice
A number of safety instructions need to be followed to operate the product described safely. Therefore read this instruction and all further instructions included carefully. The safety instructions are highlighted in the text and are referred to at the relevant passages.

Info
Various information and warning labels are attached in prominent locations on the product described. Do not remove any information or warning labels. If they are missing, you or others may not recognize dangers and may therefore be injured.

2.4 Degrees of risk and symbols

Danger
Identifies a danger that will immediately and invariably lead to fatal or serious permanent injury if the appropriate measures are not taken.

Warning
Identifies a danger that is likely to lead to fatal or serious injury if the appropriate measures are not taken.

Caution
Identifies a danger that may lead to minor injuries if the appropriate measures are not taken.

Note
Identifies a danger that will lead to considerable machine and material damage if the appropriate measures are not taken.

Note
Indicates a danger that will lead to environmental damage if the appropriate measures are not taken.
2.5 Overview of labels

Information on noise emissions
2.6 Consumer rights

Warranty claims must be submitted to an authorized KTM workshop. If you are not satisfied, please contact:

KTM North America, Inc., Customer Support, 1119 Milan Ave., Amherst, OH 44001, USA
Phone: (440) 985-3553
www.ktmusa.com

KTM Canada, Inc., Customer Support, 8701 Rue Samuel-Hatt, Chambly, QC J3L 6V4, Canada
Phone: (450) 441-4451
www.ktmcanada.com

Different rights may apply, according to national or regional legislation.

2.7 Operating noise warning

This product should be checked for necessary repair or replacement parts if the motorcycle noise has increased significantly through use. Otherwise, the owner may become subject to penalties under the applicable ordinances.
2.8 Manufacturer warranty for the exhaust monitoring system

KTM North America, Inc. guarantees that, at the time of sale, the exhaust monitoring system complies with all the standards of the US Environmental Protection Agency (EPA) and the California Air Resources Board (CARB). This manufacturer warranty applies in respect of the first owner of the motorcycle and all subsequent owners. Your exhaust monitoring system may include parts, such as the fuel injection system, ignition, catalytic converter, control units, hoses, connectors and other emission related assemblies, fuel tank, crankcase breather, fuel tank lid for vehicles with fuel evaporation monitoring, oil filler cap, pressure control valve, fuel/vapor separator, canister, ignition coils, ignition wire, capacitors, and spark plugs, if a fault occurs before the first scheduled replacement and includes the hoses, fittings, and pipes that are used directly in these components.

If the warranty conditions are met, KTM will repair your motorcycle for you free of charge, including diagnosis, parts, and labor.

As the owner of the motorcycle, you are responsible for the required maintenance specified in the Owner's Manual.

Please note that KTM is entitled to reject warranty claims if your motorcycle or a part fails due to misuse, negligence, an accident, participation in racing or similar events, improper maintenance or unauthorized modifications.

Scope of the manufacturer’s warranty
- Five (5) years or 30,000 kilometers (18,641 miles), whichever occurs first.

If you have any questions regarding the manufacturer warranty for the exhaust monitoring system, please address these to:
KTM North America, Inc., Customer Support, 1119 Milan Ave., Amherst, OH 44001, USA
Phone: (888) 985-6090

U.S. Environmental Protection Agency, 2000 Traverwood Drive, Ann Arbor, MI 48105, USA

California Air Resources Board, 1001 "I" Street, Sacramento, CA 95814, USA

2.9 Noise emission warranty

KTM warrants that this exhaust system, at the time of sale, meets all applicable U.S. EPA Federal noise standards.

This manufacturer’s warranty extends to the first person who purchases this exhaust system for purposes other than resale, and to all subsequent buyers.

Warranty claims should be directed to:
KTM North America, Inc., Customer Support, 1119 Milan Ave., Amherst, OH 44001, USA
Phone: (440) 985-3553
www.ktmusa.com

KTM Canada, Inc., Customer Support, 8701 Rue Samuel-Hatt, Chambly, QC J3L 6V4, Canada
Phone: (450) 441-4451
www.ktmcanada.com

2.10 Reporting safety defects

If you believe that your vehicle has a defect which could cause an accident resulting in injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying KTM North America, Inc.

If NHTSA receives multiple similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or KTM North America, Inc.

To contact NHTSA, you may either call the Auto Safety Hotline toll-free at 1–888–327–4236 or visit the website www.nhtsa.dot.gov, or write to: NHTSA Headquarters, 1200 New Jersey Avenue, SE, West Building, Washington, DC 20590. You can also obtain other information about motor vehicle safety from the Hotline.
2.11 Tampering warning

Tampering with the noise control system is prohibited. Federal law prohibits the following acts or the causing thereof:

1. The removal or rendering inoperative by any person other than for purposes of servicing, repair, or replacement, of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its sale or delivery to the ultimate purchaser or while it is in use, or
2. the use of the vehicle after such device or element of design has been removed or rendered inoperative by any person.

Among those acts presumed to constitute tampering are the acts listed below:

1. Removal or puncturing of the main silencers, baffles, header pipes or any other components which conduct exhaust gases.
2. Removal or puncturing of parts of the intake system.
3. Lack of proper maintenance.
4. Replacing moving parts of the vehicle, or parts of the exhaust system or intake system, with parts other than those specified by the manufacturer.

2.12 Safe operation

**Danger**

**Danger of accidents** A rider who is not fit to ride poses a danger to him or herself and others.

- Do not operate the vehicle if you are not fit to ride due to alcohol, drugs or medication.
- Do not operate the vehicle if you are physically or mentally impaired.

**Danger**

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.

**Warning**

**Danger of burns** Some vehicle components become very hot when the vehicle is operated.

- Do not touch any parts such as the exhaust system, radiator, engine, shock absorber, or brake system before the vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

Only operate the vehicle when it is in perfect technical condition, in accordance with its intended use, and in a safe and environmentally compatible manner.

An appropriate driver's license is needed to ride the vehicle on public roads.

Have malfunctions that impair safety promptly eliminated by an authorized KTM workshop.

Adhere to the information and warning labels on the vehicle.
2.13 Protective clothing

**Warning**
Risk of injury
Missing or poor protective clothing presents an increased safety risk.

- Wear appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
- Always wear protective clothing that is in good condition and meets the legal regulations.

In the interest of your own safety, KTM recommends that you only operate the vehicle while wearing protective clothing.

2.14 Work rules

Unless specified otherwise, the ignition must be turned off during all work (models with ignition lock, models with remote key) or the engine must be at a standstill (models without ignition lock or remote key).

Special tools are necessary for certain tasks. The tools are not a component of the vehicle, but can be ordered using the number in parentheses. Example: bearing puller (15112017000)

During assembly, use new parts to replace parts which cannot be reused (e.g. self-locking screws and nuts, expansion screws, seals, sealing rings, O-rings, pins, and lock washers).

In the case of certain screws, a screw adhesive (e.g. Loctite®) is required. Observe the manufacturer's instructions.

If thread locker (e.g., Precote®) has already been applied to a new part, do not apply any additional thread locker. After disassembly, clean the parts that are to be reused and check them for damage and wear. Change damaged or worn parts.

After completing a repair or service work, check the operating safety of the vehicle.

2.15 Environment

If you use your motorcycle responsibly, you can ensure that problems and conflicts do not occur. To protect the future of the motorcycle sport, make sure that you use your motorcycle legally, display environmental consciousness, and respect the rights of others.

When disposing of used oil, other operating and auxiliary fluids, and used components, comply with the laws and regulations of the respective country.

Because motorcycles are not subject to the EU regulations governing the disposal of used vehicles, there are no legal regulations that pertain to the disposal of an end-of-life motorcycle. Your authorized KTM dealer will be glad to advise you.

2.16 Owner's Manual

Read this owner's manual carefully and completely before making your first trip. The Owner's Manual contains useful information and many tips on how to operate, handle, and service your motorcycle. This is the only way to find out how best to customize the vehicle for your own use and how you can protect yourself from injury.

**Tip**
Store the Owner's Manual on your terminal device, for example, so that you can read it whenever you need to.

If you would like to know more about the vehicle or have questions on the material you read, please contact an authorized KTM dealer.

The Owner's Manual is an important component of the vehicle. If the vehicle is sold, the Owner's Manual must be downloaded again by the new owner.

The Owner's Manual can be downloaded several times using the QR code or the link on the delivery certificate.

The Owner's Manual is also available for download from your authorized KTM dealer and on the KTM website. A printed copy can also be ordered from your authorized KTM dealer.

International KTM Website: http://www.ktm.com
3.1 Manufacturer warranty, implied warranty

The work prescribed in the service schedule must only be carried out in an authorized KTM workshop and confirmed in the KTM Dealer.net, as otherwise all warranty claims will be void. Damage or secondary damage caused by tampering with and/or conversions on the vehicle are not covered by the manufacturer warranty.

3.2 Fuel, auxiliary substances

Note
Environmental hazard Improper handling of fuel is a danger to the environment.
- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

Use fuels and auxiliary substances in accordance with the Owner's Manual and specification.

3.3 Spare parts, accessories

For your own safety, only use spare parts and accessory products that are approved and/or recommended by KTM and have them installed by an authorized KTM workshop. KTM accepts no liability for other products and any resulting damage or loss. Certain spare parts and accessory products are specified in parentheses in the descriptions. Your authorized KTM dealer will be glad to advise you.

The current KTM PowerParts for your vehicle can be found on the KTM website.
International KTM Website: http://www.ktm.com

3.4 Service

A prerequisite for perfect operation and prevention of premature wear is that the service, care, and tuning work on the engine and chassis is properly carried out as described in the Owner's Manual. An incorrect suspension setting can lead to damage and breakage of chassis components.

Use of the vehicle under difficult conditions, such as dusty environments, heavy rain, high heat or with a heavy load, can lead to considerably more rapid wear of components such as the air filter, drive train, brake system, or suspension components. For this reason, it may be necessary to inspect or replace parts before the next scheduled service.

It is imperative that you adhere to the stipulated run-in times and service intervals. If you observe these exactly, you will ensure a much longer service life for your motorcycle.

The relevant mileage or time interval is whichever occurs first.

3.5 Figures

The figures contained in the manual may depict special equipment.
In the interest of clarity, some components may be shown disassembled or may not be shown at all. It is not always necessary to disassemble the component to perform the activity in question. Please follow the instructions in the text.

3.6 Customer service

Your authorized KTM dealer will be happy to answer any questions you may have on your vehicle and KTM.

A list of authorized KTM dealers can be found on the KTM website.
International KTM Website: http://www.ktm.com

8. Start button (p. 19)
9. Throttle grip (p. 17)
10. Hand brake lever (p. 17)
11. Foot brake lever (p. 23)
12. Passenger foot pegs (p. 22)
5.1 Vehicle identification number

The vehicle identification number 1 is stamped on the right side of the steering head.

5.2 Type label

The type label USA 1 is located on the top frame on the right.

The Canada type label 2 is located on the bottom frame on the left.

5.3 Engine number

The engine number 1 is stamped on the left side of the engine under the engine sprocket.
5.4 Key number

The key number 1 can be found on the KEYCODECARD.

Info
The key number is needed to order a replacement key. Keep the KEYCODECARD in a safe place.
If at least one ignition key is still available, a spare key can be produced. If an ignition key is no longer present, the entire lock system must be replaced.
6.1 Clutch lever

The clutch lever 1 is fitted on the left side of the handlebar.

6.2 Hand brake lever

The hand brake lever 1 is fitted on the right side of the handlebar. The front brake is engaged using the hand brake lever.

6.3 Throttle grip

The throttle grip 1 is fitted on the right side of the handlebar.

6.4 Switches on the left side of the handlebar

6.4.1 Combination switch

The combination switch is fitted on the left side of the handlebar.

Overview of the left combination switch

1. Light switch (p. 18)
2. Menu buttons (p. 18)
3. Turn signal switch (p. 18)
4. Horn button (p. 18)
6.4.2 Light switch

Light switch 1 is fitted on the left side of the handlebar.

**Possible states**

- **Low beam on** – Light switch in position A. In this position, the low beam and the tail light are switched on.
- **High beam on** – Push the light switch to position B. In this position, the high beam and the tail light are switched on.
- **Headlight flasher** – Push the light switch into position C.

6.4.3 Menu buttons

The menu buttons are fitted in the middle of the left combination switch.
The menu buttons are used to control the display on the combination instrument.

- Button 1 is the **UP** button.
- Button 2 is the **DOWN** button.
- Button 3 is the **SET** button.
- Button 4 is the **BACK** button.

6.4.4 Turn signal switch

Turn signal switch 1 is fitted on the left side of the handlebar.

**Possible states**

- **Turn signal off** – Turn signal switch pushed toward the switch housing.
- **Left turn signal, on** – Turn signal switch pressed to the left. The turn signal switch returns automatically to the central position after use.
- **Right turn signal, on** – Turn signal switch pressed to the right. The turn signal switch returns automatically to the central position after use.

6.4.5 Horn button

Horn button 1 is fitted on the left side of the handlebar.

**Possible states**

- The horn button is in the basic position
- The horn button is pressed – The horn is operated in this position.
6.5 Switches on the right side of the handlebar

6.5.1 Emergency OFF switch

The emergency OFF switch 1 is fitted on the right side of the handlebar.

Possible states

- Emergency OFF switch off – In this position, the ignition circuit is interrupted, a running engine stops, and a non-running engine cannot be started.
- Emergency OFF switch on – This position is required for operation; the ignition circuit is closed.

6.5.2 Start button

Start button 1 is fitted on the right side of the handlebar.

Possible states

- The start button 1 is in the basic position
- The start button 1 is pressed – In this position, the starter motor is actuated.

6.6 Ignition and steering lock

The ignition and steering lock is located in front of the upper triple clamp.

Possible states

- Ignition off OFF – In this position, the ignition circuit is interrupted, a running engine stops, and a non-running engine will not start. The ignition key can be removed.
- Ignition on ON – In this position, the ignition circuit is closed and the engine can be started.
- Steering locked LOCK – In this position, the ignition circuit is interrupted and the steering locked. The ignition key can be removed.

6.7 Locking the steering

Note

Danger of damage  The parked vehicle can roll away or fall over.
- Park the vehicle on a firm and level surface.
6.8 Unlocking the steering

- Park the vehicle.
- Turn the handlebar all the way to the left.
- Insert the ignition key into the ignition and steering lock, press in, and turn to the left. Remove the ignition key.

✓ Steering is no longer possible.

- Insert the ignition key into the ignition and steering lock, press in, and turn to the right. Remove the ignition key.

✓ The handlebar can now be moved again.

6.9 Socket for electrical accessories

Socket 1 for electrical accessories is fitted in front of the upper triple clamp. It is connected to the ignition plus and is fuse-protected.

6.10 Opening fuel tank filler cap

**Danger**

*Fire hazard*  Fuel is highly flammable.

- The fuel in the fuel tank expands when warm and can escape if overfilled.
- Do not fuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.
Warning

Danger of poisoning Fuel is poisonous and a health hazard.
- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

Note

Environmental hazard Improper handling of fuel is a danger to the environment.
- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

6.11 Closing the fuel tank filler cap

- Lift cover 1 of the fuel tank filler cap and insert the ignition key into the lock.

Note

Danger of damage The ignition key may break if overloaded.
- Push down on the fuel tank filler cap to take pressure off the ignition key.
- Turn the ignition key 90° clockwise.
- Lift the fuel tank filler cap.

Warning

Fire hazard Fuel is highly flammable, toxic and a health hazard.
- Check that the fuel tank filler cap is locked correctly after closing.
- Change your clothing if fuel spills on them.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Fold down the fuel tank filler cap.
- Turn the ignition key 90° clockwise.
- Push down the fuel tank filler cap and turn the ignition key counterclockwise until the fuel tank filler cap lock engages.
- Remove the ignition key and close the cover.
6.12 Seat lock

The seat lock 1 is located to the left of the seat. The seat lock can be unlocked using the ignition key.

6.13 Tool set

The tool set 1 is located under the passenger seat.

6.14 Grab handles

The grab handles 1 are used for moving the motorcycle around. If you carry a passenger, the passenger can hold onto the grab handles during the trip.

6.15 Passenger foot pegs

The passenger foot pegs can be folded up and down.

Possible states
- Passenger foot pegs folded up – For operation without a passenger.
- Passenger foot pegs folded down – For operation with a passenger.
### 6.16 Shift lever

Shift lever 1 is mounted on the left side of the engine.

The gear positions can be seen in the photograph. The neutral or idle position is between the first and second gears.

### 6.17 Foot brake lever

Foot brake lever 1 is located in front of the right footrest. The foot brake lever is used to activate the rear brake.

### 6.18 Side stand

The side stand 1 is located on the left of the vehicle. The side stand is used for parking the motorcycle.

**Info**

The side stand must be folded up during motorcycle use. The side stand is coupled with the safety starting system; follow the riding instructions.

**Possible states**

- **Side stand folded out** – The vehicle can be supported on the side stand. The safety starting system is active.
- **Side stand folded in** – This position is mandatory when riding the motorcycle. The safety starting system is inactive.
7.1 Combination instrument

The combination instrument is attached in front of the handlebar. The combination instrument is divided into two function areas.

1 indicator lamps ( p. 25)

Display 2

7.2 Activation and test

Activation
The combination instrument is activated when the ignition is switched on.

Info
The brightness of the displays is controlled by an ambient light sensor in the combination instrument.

Test
The welcome text appears on the display and the indicator lamps are briefly activated for a function check.

7.3 Day-Night mode

Day mode is shown in a bright color.

Night mode is shown in a dark color.

Info
The ambient light sensor in the combination instrument detects the brightness of the environment. Depending on the amount of light detected by the ambient light sensor, the display is brightened or dimmed, or switched to the other mode depending on the setting. The display mode can be configured in the Display Theme menu. Here, you can select automatic day-night mode or permanent night mode.
7.4 Warnings

Warnings appear on the top and/or bottom edge of the display; these are marked yellow or red depending on their relevance. Yellow warnings 1 indicate malfunctions or information which require prompt intervention or an adjustment to the riding style. Red warnings 2 indicate malfunctions or information which require immediate intervention.

### Info
Warnings can be hidden by pressing any button. All the existing warnings are displayed in the Warning menu until they are no longer active.

7.5 Indicator lamps

The indicator lamps offer additional information about the operating state of the motorcycle. When the ignition is switched on, all indicator lamps light up briefly.

### Info
The malfunction indicator lamp always lights up as long as the engine is not running. If the engine is running and the malfunction indicator lamp lights up, stop (taking care not to endanger yourself or other road users in the process) and contact an authorized KTM workshop.

The oil pressure warning lamp always lights up as long as the engine is not running. If the engine is running and the oil pressure warning lamp lights up, stop immediately (taking care not to endanger yourself or other road users in the process) and switch off the engine.

The ABS warning lamp lights up until a speed of approx. 6 km/h (approx. 4 mph) or more has been reached.
### Possible states

<table>

### 7.6 Display

![Dashboard Image]

1. **Speed** (p. 27)
2. **Shift warning light** (p. 28)
3. **Gear display**

---

---
The 1 area of the display indicates whether MTC is switched on or off.
The motorcycle traction control can be switched on or off in the MTC submenu.

The ABS mode setting is shown in the 1 area of the display.
The ABS can be configured in the ABS submenu.

The speed 1 is measured in revolutions per minute.
7.10  Shift warning light

The shift warning light is integrated in the tachometer display. In the Shift Light menu, the engine speed for the shift warning light can be set. The shift warning light is always active during the running-in phase (up to 1,000 km / 621 mi). The shift warning light can only be deactivated, and the values for RPM1 and RPM2 can only be adjusted after this. In RPM1 the shift warning light flashes and in RPM2 it flashes and the color changes.

<table>

</tr>
</tbody>
</table>

7.11  Speed

Speed  is shown in kilometers per hour km/h or in miles per hour mph.

7.12  ODO display

The total distance covered ODO is shown in area  of the display.

This value is retained, even if the 12-V battery is disconnected from the vehicle or the fuse blows.
7.13 Coolant temperature indicator

The coolant temperature indicator consists of bars. The more bars that light up, the hotter the coolant.

Note

Engine failure  Overheating damages the engine.
– If the coolant temperature warning is displayed, stop immediately and take care not to endanger yourself or other traffic participants in the process.
– Allow the engine and cooling system to cool down.
– Check and, if necessary, correct the coolant level on the cooling system while it is in a cooled state.

Info

When all the bars light up, the warning ENGINE TEMP HIGH also appears.
If the cooling system overheats, the maximum engine speed is limited.

Possible states

• The engine is cold – Up to three bars light up.
• Engine warm – Four to five bars light up.
• Engine hot – Six to eight bars light up.
• Engine very hot – All eight bars light up red.

7.14 Fuel level display

The fuel tank contents are shown in area 1 of the display.
The fuel level indicator consists of bars. The more bars are lit, the more fuel is in the fuel tank.

Info

If the fuel level is getting low, the last segment flashes red and the following warning also appears LOW FUEL.
The fuel level is displayed with a slight delay to prevent the indicator from constantly moving while riding.
The fuel level display is not updated while the side stand is folded out or the emergency off switch is switched off.
Once the side stand is folded up and the emergency OFF switch is switched on, the fuel level display is next updated after 2 minutes.
The fuel level display flashes if the combination instrument does not receive a signal from the fuel level sensor.
7.15 Time

The time is shown in area 1 of the display. The time is displayed in 24 hour format in all languages except for EN-US. The time is displayed in 12 hour format if the language is set to EN-US.

The time can be configured in the Clock/Date menu.

- **Info**
  - The time must be reset if the 12-V battery was disconnected from the vehicle or the fuse was removed.

7.16 Favourites display

Up to eight items of information are shown in the Favourites display. The Favourites display can be freely configured in the Favourites menu.

- **Info**
  - One to four items of information selected are displayed on two lines. Five to eight items of information selected are displayed on a single line.

7.17 Quick Selector 1 display

When the menu is closed, the Quick Selector 1 menu is opened by pressing the UP button. Press the BACK button to close Quick Selector 1.

- **Info**
  - The Quick Selector 1 can be configured in the Quick Selector 1 menu. Any information can be selected.

7.18 Quick Selector 2 display

When the menu is closed, the Quick Selector 2 menu is opened by pressing the DOWN button. Press the BACK button to close Quick Selector 2.

- **Info**
  - The Quick Selector 2 can be configured in the Quick Selector 2 menu. Any information can be selected.
7.19 Menu

Press the SET button 1 in the start screen to open the menu. Navigate through the menu using the UP button 2 or the DOWN button 3. Press the BACK button 4 to close the current menu or the menu overview.

7.19.1 KTM MY RIDE (optional)

Condition
- The motorcycle is stationary.
- Function KTM MY RIDE (optional) activated.
- Function Bluetooth® (optional) activated.
  - Press the SET button when the menu is closed.
  - Press the UP or DOWN button until KTM MY RIDE is marked.
  - Press the SET button to open the menu.

A suitable cellphone or headset can be paired with the combination instrument via Bluetooth® in the KTM MY RIDE menu.

Info
Not every cellphone and headset is suitable for pairing with the combination instrument. The standard Bluetooth® 2.1 must be supported.

7.19.2 Trips/Data

Press the SET button when the menu is closed.
- Press the UP or DOWN button until Trips/Data is marked. Press the SET button to open the menu.

General information can be accessed in Trips/Data.

7.19.3 Motorcycle

Press the SET button when the menu is closed.
- Press the UP or DOWN button until Motorcycle is marked. Press the SET button to open the menu.

The vehicle riding mode can be configured in Motorcycle.
7.19.4 Settings

Condition
- The motorcycle is stationary.
  - Press the SET button when the menu is closed.
  - Press the UP or DOWN button until Settings is marked. Press the SET button to open the menu.

The combination instrument display can be configured in Settings. Settings can be made for units or various values. Several functions can be enabled or disabled. Favorites and quick selections can be configured.

7.19.5 Pairing (optional)

Condition
- The motorcycle is stationary.
- Function KTM MY RIDE (optional) activated.
- Function Bluetooth® (optional) activated.
  - Press the SET button when the menu is closed.
  - Press the UP or DOWN button until KTM MY RIDE is marked. Press the SET button to open the menu.
  - Press the UP or DOWN button until Pairing is marked. Press the SET button to open the menu.

A suitable cellphone or headset can be paired with the combination instrument via Bluetooth® in the Pairing menu.

Info
The Bluetooth® function can only be used in conjunction with KTM MY RIDE (optional). When the Bluetooth® function is switched on and the device is connected, the Bluetooth® symbol appears in the display of the combination instrument.

Not every cellphone and headset is suitable for pairing with the combination instrument.

7.19.6 Phone (optional)

Condition
- The motorcycle is stationary.
- Function KTM MY RIDE (optional) activated.
- Function Bluetooth (optional) activated.
  - The Bluetooth® function should also be activated in the device to be paired.
  - Press the SET button when the menu is closed.
  - Press the UP or DOWN button until KTM MY RIDE is marked. Press the SET button to open the menu.
  - Press the UP or DOWN button until Pairing is marked. Press the SET button to open the menu.
  - Press the UP or DOWN button until Phone is marked. Press the SET button to open the menu.
A suitable cellphone can be paired with the combination instrument in the Phone menu.
Two cellphones can never be paired simultaneously with the combination instrument.

- Press the UP or DOWN button until Pairing is marked. Press the SET button to open the menu.
- The combination instrument starts searching for a suitable cellphone. If the search was successful, the name of the cellphone is displayed in the Pairing menu. Press the SET button to start the pairing.

Info
The cellphone must be visible via Bluetooth® for the cellphone to be found by the combination instrument.

- A message appears on the combination instrument indicating that this is now ready for pairing. The pairing is completed successfully by confirming the Passkey on the cellphone and on the combination instrument.

Info
Once the pairing is completed, the registered trademark of the paired cellphone is displayed in the Phone menu. Press the UP or DOWN button until the paired device is marked. The paired device can be deleted by pressing the SET button.
Not every cellphone is suitable for pairing with the combination instrument.

- Move the previously paired device into the range of the combination instrument while the Bluetooth® function is active.
  ✔ The device is automatically paired with the combination instrument.
  ❌ If the device is not automatically paired with the combination instrument after approx. 30 seconds:
    - Restart combination instrument or Pairing repeat procedure.

---

7.19.7 Headset (optional)

**Condition**
- The motorcycle is stationary.
- Function KTM MY RIDE (optional) activated.
- Function Bluetooth (optional) activated.
- The Bluetooth® function should also be activated in the device to be paired.
- Press the SET button when the menu is closed.
- Press the UP or DOWN button until KTM MY RIDE is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until Pairing is marked. Press the SET button to open the menu.
– Press the UP or DOWN button until Headset is marked. Press the SET button to open the menu.
– Press the UP or DOWN button until Pairing is marked. Press the SET button to open the menu.
– The combination instrument starts searching for a suitable headset. If the search was successful, the name of the headset is displayed in the Pairing menu. Press the SET button to select the device. If a PIN code is required for the headset, this must be entered now. The pairing of a headset with the combination instrument is now completed.

---

**Info**

The headset must be in pairing mode for the headset to be found by the combination instrument. Follow the instructions in the Owner's Manual of the headset. Once the pairing is completed, the name of the paired headset is displayed in the Headset menu. Press the UP or DOWN button until the paired device is marked. The paired device can be deleted by pressing the SET button. Not every headset is suitable for pairing with the combination instrument.

---

– Move the previously paired device into the range of the combination instrument while the Bluetooth® function is active.
  - The device is automatically paired with the combination instrument.
  - If the device is not automatically paired with the combination instrument after approx. 30 seconds:
    – Restart combination instrument or Pairing repeat procedure.

---

### 7.19.8 Audio (optional)

**Condition**

- Function KTM MY RIDE (optional) activated.
- Function Bluetooth® (optional) activated.
- The Bluetooth® function should also be activated in the device to be paired.

– Press the SET button when the menu is closed.
– Press the UP or DOWN button until KTM MY RIDE is marked. Press the SET button to open the menu.

**Warning**

**Danger of accidents** Headphone volume which is too high distracts attention from traffic activity.

– Always select headphone volume which is low enough for you to still clearly hear acoustic signals.

– Press the UP or DOWN button until Audio is marked. Press the SET button to open the menu.
– Press and hold the UP button to increase the audio volume.
– Press and hold the DOWN button to reduce the audio volume.
– Press the UP button briefly to change to the next audio track.
- Press the **DOWN** button briefly to change to the previous audio track.
- Press the **SET** button to play or pause the audio track.

---

**Info**
The audio function can be added to **Quick Selector 1** or **Quick Selector 2** for easier operation.

---

### 7.19.9 Telephony (optional)

- **Condition**
  - Function **KTM MY RIDE** activated (optional).
  - Function **Bluetooth®** activated.
  - The **Bluetooth®** function should also be activated in the device to be paired.
  - Headset linked with appropriate cellphone.

- **Warning**
  - **Danger of accidents** Headphone volume which is too high distracts attention from traffic activity.
  - Always select headphone volume which is low enough for you to still clearly hear acoustic signals.

- Press the **SET** button to accept an incoming call.
- Press the **BACK** button to reject an incoming call.

---

**Info**
The call duration and contact are displayed. Depending on the cellphone settings, the contact is shown by name.

---

### 7.19.10 General Info

- Press the **SET** button when the menu is closed.
- Press the **UP** or **DOWN** button until **Trips/Data** is marked. Press the **SET** button to open the menu.
- Press the **UP** or **DOWN** button until **General Info** is marked. Press the **SET** button to open the menu.

- **Date** shows the date.
- **ODO** shows the total distance covered.
- **Battery** indicates the battery voltage.
7.19.11 Trip 1

- Press the SET button when the menu is closed.
- Press the UP or DOWN button until Trips/Data is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until Trip 1 is marked. Press the SET button to open the menu.

Trip shows the distance since the last reset, such as between two refueling stops. Trip is running and counts up to 9999.
ØCons indicates the average fuel consumption based on Trip.
ØSpeed indicates the average speed based on Trip and Trip Time.
Trip Time shows the journey time on the basis of Trip and runs as soon as a speed signal is received.
Fuel Range indicates the possible distance you can cover with the fuel reserve.

Press and hold the SET button for at least 3 seconds. All the entries in the Trip 1 menu are reset.

7.19.12 Trip 2

- Press the SET button when the menu is closed.
- Press the UP or DOWN button until Trips/Data is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until Trip 2 is marked. Press the SET button to open the menu.

Trip shows the distance since the last reset, such as between two refueling stops. Trip is running and counts up to 9999.
ØCons indicates the average fuel consumption based on Trip.
ØSpeed indicates the average speed based on Trip and Trip Time.
Trip Time shows the journey time on the basis of Trip and runs as soon as a speed signal is received.
Fuel Range indicates the possible distance you can cover with the fuel reserve.

Press and hold the SET button for at least 3 seconds. All the entries in the Trip 2 menu are reset.

7.19.13 Warning

Condition
- Message or warning is present.
- Press the SET button when the menu is closed.
- Press the UP or DOWN button until Trips/Data is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until Warning is marked. Press the SET button to open the menu.
- Use the UP or DOWN button to navigate through the warnings.

All the warnings that have occurred are displayed and stored in the Warning menu.
### 7.19.14 ABS

- Press the SET button when the menu is closed.
- Press the UP or DOWN button until Motorcycle is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until ABS is marked. Press the SET button to open the submenu.
- Activate menu item using the UP or DOWN button.

#### Warning
**Danger of accidents**  An incorrectly selected ABS mode makes control of the vehicle considerably more difficult.

The ABS modes are each only suitable for certain conditions.
- Always select an ABS mode that is compatible with the surface of the ground.

- Press the SET button to select the desired ABS mode.

#### Info
The ABS mode can be switched during the journey.

Do not open the throttle during the selection.
When the ABS mode Road is active, ABS controls both wheels.
When the Offroad ABS mode is active, ABS only controls the front wheel. The rear wheel is not controlled by ABS and may lock during braking maneuvers.

### 7.19.15 MTC+MSR (optional)

- Model with MTC+MSR.
- Cruise control system function (optional) deactivated.
- Press the SET button when the menu is closed.
- Press the UP or DOWN button until Motorcycle is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until MTC+MSR is marked. Press the SET button to open the menu.
- Activate menu item using the UP or DOWN button.
- Switch MTC+MSR on or off by pressing the SET button.
Do not open the throttle when switching on or off. Press the SET button briefly when activating the motorcycle traction control and the engine traction torque control. Hold down the SET button when switching off the motorcycle traction control and engine traction torque control.

When ABS mode Offroad is active, the MSR is not active. After the ignition is switched on, the motorcycle traction control and engine traction torque control are enabled again.

| Press and hold the SET button for at least 3 seconds. | Switching off the motorcycle traction control and the engine traction torque control. |

### 7.19.16 Quick Shift+ (optional)

**Condition**
- Model with Quickshifter+.
  - Press the SET button when the menu is closed.
  - Press the UP or DOWN button until Motorcycle is marked. Press the SET button to open the menu.
  - Press the UP or DOWN button until Quick Shift+ is marked. Press the SET button to open the submenu.
  - Activate menu item using the UP or DOWN button.
  - Press the SET button to switch quickshifter+ (p. 54) button on or off.

### 7.19.17 Favourites

**Condition**
- The motorcycle is stationary.
  - Press the SET button when the menu is closed.
  - Press the UP or DOWN button until Settings is marked. Press the SET button to open the menu.
  - Press the UP or DOWN button until Favourites is marked. Press the SET button to open the menu.
  - Press the UP or DOWN button to activate the menu item and select it with the SET button.

Up to eight items of information can be selected in the Favourites menu.
### 7.19.18 Quick Selector 1

**Condition**
- The motorcycle is stationary.
- Press the SET button when the menu is closed.
- Press the UP or DOWN button until **Settings** is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until **Quick Selector 1** is marked. Press the SET button to open the menu.
- Press the UP or DOWN button to activate the menu item and select it with the SET button.

Information can be selected in the **Quick Selector 1** menu. When the menu is closed, the **Quick Selector 1** menu is opened by pressing the UP button.

### 7.19.19 Quick Selector 2

**Condition**
- The motorcycle is stationary.
- Press the SET button when the menu is closed.
- Press the UP or DOWN button until **Settings** is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until **Quick Selector 2** is marked. Press the SET button to open the menu.
- Press the UP or DOWN button to activate the menu item and select it with the SET button.

Information can be selected in the **Quick Selector 2** menu. When the menu is closed, the **Quick Selector 2** menu is opened by pressing the DOWN button.

### 7.19.20 Bluetooth (optional)

**Condition**
- The motorcycle is stationary.
- Press the SET button when the menu is closed.
- Press the UP or DOWN button until **Settings** is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until **Bluetooth** is marked. Press the SET button to open the menu.
- Activate menu item using the UP or DOWN button.
- Press the SET button to switch the Bluetooth® function on or off.

**Info**
- The Bluetooth® function can only be used in conjunction with KTM MY RIDE (optional).
- When the Bluetooth® function is switched on and the device is connected, the Bluetooth® symbol appears in the display of the combination instrument.
7.19.21 Display Theme

**Condition**
- The motorcycle is stationary.
- Press the **SET** button when the menu is closed.
- Press the **UP** or **DOWN** button until **Settings** is marked. Press the **SET** button to open the menu.
- Press the **UP** or **DOWN** button until **Display Theme** is marked. Press the **SET** button to open the menu.
- Activate menu item using the **UP** or **DOWN** button.
- Press the **SET** button to set up automatic day-night mode or permanent night mode.

**Info**
In both modes, the background lighting is brightened or dimmed depending on the amount of light that the ambient light sensor detects.

7.19.22 Shift Light

**Condition**
- The motorcycle is stationary.
- **ODO** > 1,000 km (621 mi).
- Press the **SET** button when the menu is closed.
- Press the **UP** or **DOWN** button until **Settings** is marked. Press the **SET** button to open the menu.
- Press the **UP** or **DOWN** button until **Shift Light** is marked. Press the **SET** button to open the menu.
- Activate menu item using the **UP** or **DOWN** button.
- Switch the shift warning light on or off or set the engine speed for the gear shift recommendation by pressing the **SET** button.

**Info**
When the engine speed reaches **RPM 1**, the engine speed display flashes red.
When the engine speed reaches **RPM 2**, the engine speed display flashes and the color changes.

7.19.23 Setting the time and date

**Condition**
The motorcycle is stationary.
- Press the **SET** button when the menu is closed.
- Press the **UP** or **DOWN** button until **Preferences** appears. Press the **SET** button to open the menu.
- Press the **UP** or **DOWN** button until **Clock/Date** is marked. Press the **SET** button to open the menu.
Setting the clock
- Press the UP or DOWN button until the time is marked.
- Press the SET button.
  ✔️ The hour flashes and is underlined.
- Press the UP or DOWN button until the current hour is set.
- Press the SET button.
  ✔️ The minutes flash and are underlined.
- Press the UP or DOWN button until the current minute is set.
- Press the SET button.
  ✔️ The time is stored.

Setting the date
- Press the UP or DOWN button until the date is marked.
- Press the SET button.
  ✔️ The day flashes and is underlined.
- Press the UP or DOWN button until the current day is set.
- Press the SET button.
  ✔️ The month flashes and is underlined.
- Press the UP or DOWN button until the current month is set.
- Press the SET button.
  ✔️ The year flashes and is underlined.
- Press the UP or DOWN button until the current year is set.
- Press the SET button.
  ✔️ The date is stored.

7.19.24 Distance

Condition
- The motorcycle is stationary.
- Press the SET button when the menu is closed.
- Press the UP or DOWN button until Settings is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until Units is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until Distance is marked. Press the SET button to open the menu.
- Activate menu item using the UP or DOWN button.
- Press SET button to confirm the desired unit.
7.19.25 Fuel Cons

Condition
- The motorcycle is stationary.
- Press the SET button when the menu is closed.
- Press the UP or DOWN button until Settings is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until Units is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until Fuel Cons is marked. Press the SET button to open the menu.
- Activate menu item using the UP or DOWN button.
- Press SET button to confirm the desired unit.

7.19.26 Language

Condition
- The motorcycle is stationary.
- Press the SET button when the menu is closed.
- Press the UP or DOWN button until Settings is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until Language is marked. Press the SET button to open the menu.
- Press the UP or DOWN button to activate the menu item and select it with the SET button.

The menu languages are US English, UK English, German, Italian, French, and Spanish.

7.19.27 Service

Condition
- The motorcycle is stationary.
- Press the SET button when the menu is closed.
- Press the UP or DOWN button until Settings is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until Service is marked. Press the SET button to open the menu.

The next service due is shown in the Service menu.

7.19.28 Extra Functions

Condition
- The motorcycle is stationary.
- Motorcycle with optional supplementary function.
- Press the SET button when the menu is closed.
- Press the UP or DOWN button until Settings is marked. Press the SET button to open the menu.
- Press the UP or DOWN button until Extra Functions is marked. Press the SET button to open the menu.
- Use the UP or DOWN button to navigate through the extra functions.

The optional extra functions are listed in Extra Functions.
Info
The current KTM PowerParts and the available software for your vehicle can be found on the KTM website.
8.1 Adjusting the handlebar position

**Warning**

**Danger of accidents**  A repaired handlebar poses a safety risk.

If the handlebar is bent or straightened, the material becomes fatigued. The handlebar may break as a result.

- Change the handlebar if the handlebar is damaged or bent.

---

- Remove screws 1.
- Take off the handlebar clamps 2. Take off the handlebar, place to one side and secure.

**Info**

Cover the components to protect them against damage. Do not kink the cables and lines.

- Remove screws 3. Take off handlebar supports 4.
- Place handlebar supports 4 in the required position.

**Info**

The handlebar supports are longer and higher on one side. Position the left and right handlebar supports evenly.

- Mount and tighten screws 3.

**Guideline**

<table>
<thead>
<tr>
<th>Screw, handlebar support</th>
<th>M10</th>
<th>40 Nm (29.5 lbf ft)</th>
</tr>
</thead>
</table>

- Position the handlebar.

**Info**

Make sure the cables and wiring are positioned correctly.

- Position handlebar clamps 2.
- Mount screws 1, but do not tighten yet.
  - The markings A on the handlebar are aligned centrally to the handlebar support and handlebar clamp.
  - First bolt the handlebar clamp with screws 1 onto the longer, higher side of handlebar support 4 so that both parts touch.
- Tighten screws 1 evenly.

**Guideline**

| Screw, handlebar clamp | M8 | 20 Nm (14.8 lbf ft) |
8.2 Adjusting the windshield

Condition
Low position
- Remove screw ① and windshield ②.
- Position windshield ② in lower recess A.
- Mount and tighten screw ①.

Guideline
<table>
<thead>
<tr>
<th>Remaining screws, chassis</th>
<th>M5</th>
<th>5 Nm (3.7 lbf ft)</th>
</tr>
</thead>
</table>

Condition
High position
- Remove screw ① and windshield ②.
- Position windshield ② in upper recess B.
- Mount and tighten screw ①.

Guideline
<table>
<thead>
<tr>
<th>Remaining screws, chassis</th>
<th>M5</th>
<th>5 Nm (3.7 lbf ft)</th>
</tr>
</thead>
</table>

8.3 Adjusting the basic position of the hand brake lever

- Adjust the basic position of the hand brake lever to your hand size by turning adjusting wheel ①.

Info
Push the hand brake lever forward and turn the adjusting wheel.
Do not make any adjustments while riding.
8.4 Adjusting the basic position of the clutch lever

Adjust the basic position of the clutch lever to your hand size by turning adjusting wheel 1.

Info
Push the clutch lever forward and turn the adjusting wheel.
Do not make any adjustments while riding.

8.5 Adjusting foot brake lever stub

- Remove screws 1 with the foot brake lever stub.
- Move the foot brake lever stub into desired position A, B or C. Mount and tighten screws 1.

Guideline

<table>
<thead>
<tr>
<th>Remaining screws, chassis</th>
<th>M5</th>
<th>5 Nm (3.7 lbf ft)</th>
</tr>
</thead>
</table>

8.6 Adjusting the basic position of the foot brake lever

⚠️ Warning
Danger of accidents The brake system fails in the event of overheating.
If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.
- Set the free travel on the foot brake lever in accordance with the specification.
8.7 Adjusting the shift lever

Info
The adjustment range of the shift lever is limited.

- Detach spring 1.
- Loosen nut 2.

Tip
Press the foot brake lever downwards to make this easier.

- Turn the push rod 3 to set the basic position of the foot brake lever.

Info
The range of adjustment is limited.
The screw must be screwed in by at least five full turns.
Screwing the push rod into the ball joint adjusts the foot brake lever downwards.
Screwing the push rod out of the ball joint adjusts the brake lever upwards.

Guideline
Free travel at foot brake lever 3 ... 5 mm (0.12 ... 0.2 in)

- Loosen nut 4 and turn screw 5 correspondingly until the free travel A is present. If necessary, adjust the basic position of the foot brake lever.

Guideline
Nut, foot brake lever adjustment M6 10 Nm (7.4 lbf ft)

- Hold screw 5 and tighten nut 4.

Guideline
Nut, foot brake lever adjustment M6 10 Nm (7.4 lbf ft)

Tip
Press the foot brake lever downwards to make this easier.

- Attach spring 1.
Loosen nuts ①.

Adjust the shift lever by turning shift rod ②.

Guideline

<table>
<thead>
<tr>
<th>Shift rod adjustment range</th>
<th>83 … 85 mm (3.27 … 3.35 in)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Make equal adjustments on both sides.</td>
<td></td>
</tr>
</tbody>
</table>

Tighten nuts ①.

Guideline

<table>
<thead>
<tr>
<th>Nut, shift rod</th>
<th>M6</th>
<th>6 Nm (4.4 lbf ft)</th>
</tr>
</thead>
</table>

Info

After the nuts have been tightened, the bearings of the shift rod must be central and aligned identically to each other in order to ensure freedom of movement in the bearing shells.

Loosen screw ③.

Mount bell crank shift lever ④ on the shift shaft in the required position and engage the gearing.

Info

The basic position of the marking on the shift shaft and the shift bell crank is offset by two teeth.

Tighten screw ③.

Guideline

<table>
<thead>
<tr>
<th>Screw, shift lever linkage</th>
<th>M6</th>
<th>11 Nm (8.1 lbf ft)</th>
</tr>
</thead>
</table>

Check the shift lever to ensure it is functioning properly and can move freely.
9.1 Advice on preparing for first use

**Danger**

Danger of accidents  A rider who is not fit to ride poses a danger to him or herself and others.

– Do not operate the vehicle if you are not fit to ride due to alcohol, drugs or medication.
– Do not operate the vehicle if you are physically or mentally impaired.

**Warning**

Risk of injury  Missing or poor protective clothing presents an increased safety risk.

– Wear appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
– Always wear protective clothing that is in good condition and meets the legal regulations.

**Warning**

Danger of crashing  Different tire tread patterns on the front and rear wheel impair the handling characteristic.

Different tire tread patterns can make the vehicle significantly more difficult to control.

– Make sure that only tires with a similar tire tread pattern are fitted to the front and rear wheel.

**Warning**

Danger of accidents  Non-approved or non-recommended tires and wheels impact the handling characteristic.

– Only use tires/wheels approved by KTM with the corresponding speed index.

**Warning**

Danger of accidents  New tires have reduced road grip.

The contact surface on new tires is not yet roughened.

– Run in new tires with moderate riding at alternating angles.

Running-in phase  200 km (124 mi)

**Info**

When using the vehicle, remember that others may feel disturbed by excessive noise.

– Ensure that the pre-sales inspection work has been carried out by an authorized KTM workshop.

✓ The delivery certificate is transferred upon vehicle handover.
– Read the entire Owner's Manual before riding for the first time.
– Get to know the controls.
– Get used to the handling characteristic of the motorcycle on suitable terrain before undertaking a more challenging ride. Also, ride as slowly as possible to get a better feeling for the motorcycle.
– Hold the handlebar firmly with both hands and keep your feet on the footrests when riding.
– Run the engine in. (p. 50)
9.2 Running in the engine

During the running-in phase, do not exceed the specified engine speed.

Guideline

<table>
<thead>
<tr>
<th>Maximum engine speed</th>
<th>7,500 rpm</th>
</tr>
</thead>
<tbody>
<tr>
<td>During the first:</td>
<td></td>
</tr>
<tr>
<td>1,000 km (620 mi)</td>
<td></td>
</tr>
</tbody>
</table>

Info

During the running-in phase, the shift warning light is set to a specified value and cannot be changed.

Avoid fully opening the throttle!

9.3 Loading the vehicle

Warning

Danger of accidents  Total weight and axle loads influence the handling characteristic.

The total weight consists of: motorcycle ready for operation and with a full tank, driver and passenger with protective clothing and helmet, and luggage.

– Do not exceed the maximum permissible overall weight or the axle loads.

Warning

Danger of accidents  Improper mounting of cases or the tank rucksack impairs the handling characteristic.

– Mount and secure cases and tank rucksack according to the manufacturer's instructions.

Warning

Danger of accidents  The luggage system will be damaged if it is overloaded.

– Read the manufacturer information on maximum payload when mounting cases.

Warning

Danger of accidents  Luggage which has slipped impairs visibility.

If the tail light is covered, you are less visible to traffic behind you, especially when it is dark.

– Check that your luggage is fixed properly at regular intervals.

Warning

Danger of accidents  A high payload alters the handling characteristic and increases the stopping distance.

– Adapt your speed to your payload.

Warning

Danger of accidents  Pieces of luggage which have slipped impair the handling characteristic.

– Check that your luggage is fixed properly at regular intervals.

If luggage is carried, ensure it is fixed firmly as close as possible to the center of the vehicle and ensure even weight distribution between the front and rear wheels.

– Do not exceed maximum permissible weight and maximum permissible axle loads.
<table>
<thead>
<tr>
<th>Guideline</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum permissible overall weight</td>
<td>375 kg (827 lb.)</td>
</tr>
<tr>
<td>Maximum permissible front axle load</td>
<td>135 kg (298 lb.)</td>
</tr>
<tr>
<td>Maximum permissible rear axle load</td>
<td>275 kg (606 lb.)</td>
</tr>
</tbody>
</table>
10 RIDING INSTRUCTIONS

10.1 Checks and maintenance measures when preparing for use

Before every trip, check the condition of the vehicle and ensure that it is roadworthy. The vehicle must be in perfect technical condition when it is being operated.

- Check the engine oil level. (p. 109)
- Check the front brake fluid level. (p. 79)
- Check the rear brake fluid level. (p. 82)
- Check the front brake linings. (p. 80)
- Check the rear brake linings. (p. 84)
- Check that the brake system is functioning properly.
- Check the coolant level. (p. 102)
- Check for chain dirt accumulation. (p. 69)
- Check the chain tension. (p. 70)
- Check the tire condition. (p. 89)
- Check tire pressure. (p. 91)
- Check the settings of all controls and ensure that they can be operated smoothly.
- Check that the electrical system is functioning properly.
- Check that luggage is properly secured.
- Sit on the motorcycle and check the rear mirror setting.
- Check the fuel level.

10.2 Starting

**Danger**

**Danger of poisoning**  Exhaust gases are toxic and inhaling them may result in unconsciousness and death.
- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.

**Caution**

**Danger of accidents**  Electronic components and safety devices will be damaged if the 12-V battery is discharged or missing.
If the 12-V battery is discharged or defective, malfunctions in the vehicle electronics can occur, especially when starting.
- Never operate the vehicle with a discharged 12-V battery or without a 12-V battery.

**Note**

**Engine damage**  Unfiltered intake air has a negative effect on the service life of the engine.
Dust and dirt will enter the engine without an air filter.
- Only operate the vehicle if it is equipped with an air filter.

**Note**

**Engine damage**  High revving speed with a cold engine negatively impacts the lifespan of the engine.
- Always run the engine warm at a low speed.
Unlock the steering. (p. 20)

Sit on the vehicle, take the weight off of the side stand, and move it all the way up with your foot.

Turn the emergency OFF switch to the position  

Switch on the ignition by turning the ignition key to the position  

✔ After you switch on the ignition, you can hear the fuel pump working for about two seconds. The function check of the combination instrument is run at the same time.

Shift the transmission into neutral.

✔ The green idle indicator lamp N lights up.

✔ The ABS indicator lamp lights up and goes back out after starting off.

Press start button  

---

### Info

Do not press the start button until the combination instrument function check has finished.

Do not open the throttle to start.

Press the starter for a maximum of 5 seconds. Wait for at least 5 seconds before trying again.

This motorcycle is equipped with a safety starting system. You can only start the engine if the transmission is in neutral or if the clutch lever is pulled when a gear is engaged. If the side stand is folded out and you shift into gear and release the clutch lever, the engine stops.

---

#### 10.3 Starting off

Pull the clutch lever, engage 1st gear, release the clutch lever slowly, and simultaneously open the throttle carefully.

---

#### Tip

If the engine dies while starting off, only pull the clutch lever and press the electric starter button. You do not need to shift into neutral.
10.4 Quickshifter + (optional)

If the quickshifter + is activated, you can shift up and down without actuating the clutch. Because there is no need to close the throttle grip, uninterrupted gear shifts are possible. The quickshifter + uses the shifter shaft position to check whether or not a shift should be initiated, and sends a corresponding signal to the engine control.

If the quickshifter + is disabled in the combination instrument, the clutch needs to be actuated in the normal way for each shift.

10.5 Shifting, riding

**Warning**
**Danger of accidents** Abrupt load alterations can cause the vehicle to get out of control.
– Avoid abrupt load alterations and sudden braking actions.
– Adapt your speed to the road conditions.

**Warning**
**Danger of accidents** If you change down at high engine speed, the rear wheel blocks and the engine races.
– Do not change into a low gear at high engine speed.

**Warning**
**Danger of accidents** An incorrect ignition key position causes malfunctions.
– Do not change the ignition key position while driving.

**Warning**
**Danger of accidents** Adjustments to the vehicle distract attention from traffic activity.
– Make all adjustments when the vehicle is at a standstill.

**Warning**
**Risk of injury** The passenger may fall from the motorcycle if they conduct themselves incorrectly.
– Ensure that the passenger sits correctly on the passenger seat, places his or her feet on the passenger foot pegs and holds on to the rider or the grab handles.
– Note the regulations governing the minimum age of passengers in your country.
Warning
Danger of accidents A risky riding style constitutes a major risk.
– Comply with traffic regulations and ride defensively and with foresight to detect sources of danger as early as possible.

Warning
Danger of accidents Cold tires have reduced road grip.
– Ride the first miles carefully on every journey at moderate speed until the tires reach operating temperature.

Warning
Danger of accidents New tires have reduced road grip.
The contact surface on new tires is not yet roughened.
– Run in new tires with moderate riding at alternating angles.
Running-in phase 200 km (124 mi)

Warning
Danger of accidents Pieces of luggage which have slipped impair the handling characteristic.
– Check that your luggage is fixed properly at regular intervals.

Warning
Danger of accidents A fall can damage the vehicle more seriously than it may first appear.
– Check the vehicle after a fall as you do when preparing for use.

Note
Engine failure Overheating damages the engine.
– If the coolant temperature warning is displayed, stop immediately and take care not to endanger yourself or other traffic participants in the process.
– Allow the engine and cooling system to cool down.
– Check and, if necessary, correct the coolant level on the cooling system while it is in a cooled state.

Note
Transmission damage Incorrect use of the quickshifter+ will damage the transmission.
The quickshifter+ can only be used if the function is enabled in the combination instrument.
The quickshifter+ is not active if you pull the clutch lever.
– Only use the quickshifter+ in the permitted speed range shown.

Info
If unusual noises occur while riding, stop immediately (taking care not to endanger yourself or other road users in the process), switch off the engine and contact an authorized KTM workshop.
– Shift into a higher gear when conditions allow (incline, road situation, etc.).
– Release the throttle while simultaneously pulling the clutch lever, shift into the next gear, release the clutch lever, and open the throttle.

Info
The gear positions can be seen in the figure. The idle position is between the first and second gears. First gear is used for starting off or for steep inclines.
- After reaching maximum speed by fully opening the throttle grip, turn the throttle back so it is ¾ open. This will barely reduce the speed, but fuel consumption will be considerably lower.

- Accelerate only up to a speed suitable for the road surface and weather conditions. Particularly in bends, do not shift, and accelerate very carefully.

- Brake if necessary and close the throttle at the same time in order to shift down.

- Pull clutch lever and shift into a lower gear, release the clutch lever slowly, and open the throttle or shift again.

- Switch off the engine if you are likely to be running at idle speed or stationary for a long time.

- If the engine stalls (e.g. at an intersection), just pull the clutch lever and press the start button. The transmission must not be shifted into neutral.

- If the oil pressure warning lamp ⚠️ lights up during a trip, stop as soon as it is safe to do so and switch off the engine. Contact an authorized KTM workshop.

- If the malfunction indicator lamp ⚠️ lights up during a trip, please contact an authorized KTM workshop as soon as possible.

- If the general warning lamp ⚠️ lights up during a trip, an operating safety (warning) message was detected.

---

**Info**

All warnings which have occurred are displayed and stored in the Warning menu until these are no longer active.

---

If the quickshifter + (optional) is enabled in the combination instrument, you can shift up in the speed range shown without pulling the clutch lever.

**Info**

The minimum engine speed before shifting up in revolutions per minute is shown in the figure. Pull the shift lever quickly back to the stop without changing the throttle twist grip position.

---

If the quickshifter + (optional) is enabled in the combination instrument, you can shift down in the speed range shown without pulling the clutch lever.

**Info**

The maximum engine speed before shifting down in revolutions per minute is shown in the figure. Depress the shift lever quickly back to the stop without changing the throttle twist grip position.
10.6 Applying the brakes

**Warning**

**Danger of accidents** Moisture and dirt impair the brake system.
- Brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.

**Warning**

**Danger of accidents** A spongy pressure point on the front or rear brake reduces braking efficiency.
- Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

**Warning**

**Danger of accidents** The brake system fails in the event of overheating.
If the foot brake lever is not released, the brake linings drag continuously.
- Take your foot off the foot brake lever if you do not want to brake.

**Warning**

**Danger of accidents** Higher total weight increases the stopping distance.
- Take the longer stopping distance into account when carrying a passenger or luggage with you.

**Warning**

**Danger of accidents** Salt on the roads impairs the brake system.
- Brake carefully several times to remove salt from the brake linings and the brake discs.

**Warning**

**Danger of accidents** ABS may increase the stopping distance in certain situations.
- Adjust application of the brakes to the respective riding situation and riding surface conditions.

- When braking, release the throttle and apply the front and rear brakes at the same time.

**Info**

When the ABS is enabled, maximum braking power can be achieved even with low road grip surfaces such as sandy, wet, or slippery terrain without locking the wheels.

**Warning**

**Danger of accidents** The rear wheel can lock due to the engine braking effect.
- Pull in the clutch, if you perform emergency or full braking, or if you brake on a slippery ground.

**Warning**

**Danger of accidents** Banked or laterally sloping ground reduces the maximum possible delay.
- If possible finish braking before going into a bend.

- Always finish braking before you go into a bend. Shift down to a lower gear appropriate to your speed.
- Use the braking effect of the engine on long downhill stretches. Shift back one or two gears, but do not over-rev the engine when doing so. This means that significantly less braking is required and the brake system does not overheat.
### 10.7 Stopping, parking

#### Warning

**Risk of injury** People who act without authorization endanger themselves and others.
- Do not leave the vehicle unattended if the engine is running.
- Protect the vehicle against access by unauthorized persons.
- Lock the steering and remove the ignition key if you leave the vehicle unattended.

**Warning**

**Danger of burns** Some vehicle components become very hot when the vehicle is operated.
- Do not touch any parts such as the exhaust system, radiator, engine, shock absorber, or brake system before the vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

#### Note

**Material damage** The vehicle may be damaged by incorrect procedure when parking.
Significant damage may be caused if the vehicle rolls away or falls over.
The components for parking the vehicle are designed only for the weight of the vehicle.
- Park the vehicle on a firm and level surface.
- Ensure that nobody sits on the vehicle when the vehicle is parked on a stand.

- Apply the brakes on the motorcycle.
- Shift the transmission into neutral.
- Switch off the ignition by turning the ignition key to the position "lock".

#### Info

If the engine is switched off with the emergency OFF switch and the ignition remains switched on in the ignition lock, the power supply to most electrical power consumers remains uninterrupted and this discharges the 12-V battery. You should therefore always switch off the engine with the ignition lock – the emergency OFF switch is intended for emergencies only.

- Park the motorcycle on a firm surface.
- Swing side stand forward with your foot as far as it will go and lean the vehicle on it.
- Lock the steering. (p. 19)

### 10.8 Transport

#### Note

**Danger of damage** The parked vehicle can roll away or fall over.
- Park the vehicle on a firm and level surface.

#### Note

**Fire hazard** Hot vehicle components pose a fire hazard and explosion risk.
- Do not park the vehicle near to materials which are highly flammable or explosive.
- Allow the vehicle to cool down before covering it.
10.9 Refueling

Danger
Fire hazard Fuel is highly flammable.
The fuel in the fuel tank expands when warm and can escape if overfilled.
– Do not fuel the vehicle in the vicinity of open flames or lit cigarettes.
– Switch off the engine for refueling.
– Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
– If any fuel is spilled, wipe it off immediately.
– Observe the specifications for refueling.

Warning
Danger of poisoning Fuel is poisonous and a health hazard.
– Avoid skin, eye and clothing contact with fuel.
– Immediately consult a doctor if you swallow fuel.
– Do not inhale fuel vapors.
– In case of skin contact, rinse the affected area with plenty of water.
– Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
– Change your clothing in case of fuel spills on them.

Note
Material damage Inadequate fuel quality causes the fuel filter to quickly become clogged.
In some countries and regions, the available fuel quality and cleanliness may not be sufficient. This will result in problems with the fuel system.
– Refuel only with clean fuel that meets the specified standards. (Your authorized KTM workshop will be glad to help.)

Note
Environmental hazard Improper handling of fuel is a danger to the environment.
– Do not allow fuel to enter the groundwater, the soil, or the sewage system.
Switch off the engine.
Open fuel tank filler cap. (p. 20)
Fill the fuel tank with fuel up to the lower edge 1 of the fuel filler.

<table>
<thead>
<tr>
<th>Total fuel tank capacity, approx.</th>
<th>14.5 l (3.83 US gal)</th>
<th>Super unleaded (ROZ 95) (p. 127)</th>
</tr>
</thead>
</table>

Close the fuel tank filler cap. (p. 21)
## 11.1 Additional information

Any further work that results from the compulsory work or from the recommended work must be ordered separately and invoiced separately.

Different service intervals may apply in your country, depending on the local operating conditions. Individual service intervals and scopes may change in the course of technical developments. The most up-to-date service schedule can always be found on KTM Dealer.net. Your authorized KTM dealer will be happy to advise you.

## 11.2 Required work

The fork and the shock absorber offer many options for adapting the chassis to the riding style and the payload.

The recommendations for the suspension setting are shown in table ①. The table is located on the fuel tank and is covered by the seat when the motorcycle is ready to ride.

These adjustments should be understood as a guideline and should always be the basis for one’s own personal suspension setting. Do not change the adjustments at random, as otherwise the riding characteristics could deteriorate, particularly at high speeds.

### 12.2 Adjusting the compression damping of the fork

- Turn adjuster ① clockwise all the way to the stop.

- Turn counterclockwise by the number of clicks corresponding to the fork type.

  **Guideline**
  
<table>
<thead>
<tr>
<th>Compression damping</th>
<th>Comfort</th>
<th>Standard</th>
<th>Sport</th>
<th>Full payload</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>17 clicks</td>
<td>15 clicks</td>
<td>10 clicks</td>
<td>15 clicks</td>
</tr>
</tbody>
</table>

- Turn clockwise to increase damping; turn counterclockwise to reduce damping during compression.
12.3 Adjusting the rebound damping of the fork

**Info**
The hydraulic rebound damping determines the fork suspension behavior.

- Turn adjuster 1 clockwise all the way to the stop.

**Info**
Adjuster 1 is located at the upper end of the right fork leg. The rebound damping is located in right fork leg REB (red adjuster). The compression damping is located in left fork leg COMP (white adjuster).

- Turn counterclockwise by the number of clicks corresponding to the fork type.

**Guideline**

<table>
<thead>
<tr>
<th>Rebound damping</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Comfort</td>
<td>20 clicks</td>
</tr>
<tr>
<td>Standard</td>
<td>15 clicks</td>
</tr>
<tr>
<td>Sport</td>
<td>10 clicks</td>
</tr>
<tr>
<td>Full payload</td>
<td>15 clicks</td>
</tr>
</tbody>
</table>

**Info**
Turn clockwise to increase the damping; turn counterclockwise to reduce damping when the shock absorber rebounds.

12.4 Adjusting the spring preload of the shock absorber

**Warning**
Danger of accidents

Modifications to the suspension setting may seriously alter the handling characteristic.

- Ride slowly to start with after making adjustments to get the feel of the new handling characteristic.

**Info**
The spring preload defines the initial status of the spring operation on the shock absorber. The best spring preload setting is achieved when it is set for the weight of the rider and that of any luggage and a passenger, thus ensuring an ideal compromise between handling and stability.

- Adjust the spring preload by turning adjusting ring 1.

**Guideline**

<table>
<thead>
<tr>
<th>Spring preload</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Comfort</td>
<td>3 clicks</td>
</tr>
<tr>
<td>Standard</td>
<td>3 clicks</td>
</tr>
<tr>
<td>Sport</td>
<td>3 clicks</td>
</tr>
<tr>
<td>Full payload</td>
<td>10 clicks</td>
</tr>
</tbody>
</table>
12.5 Adjusting the rebound damping of the shock absorber

**Caution**

**Risk of injury**  Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.

– Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

- Turn adjusting screw 1 clockwise up to the last perceptible click.
- Turn counterclockwise by the number of clicks corresponding to the shock absorber type.

**Guideline**

<table>
<thead>
<tr>
<th>Rebound damping</th>
<th>Comfort</th>
<th>15 clicks</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Standard</td>
<td>10 clicks</td>
</tr>
<tr>
<td></td>
<td>Sport</td>
<td>5 clicks</td>
</tr>
<tr>
<td></td>
<td>Full payload</td>
<td>10 clicks</td>
</tr>
</tbody>
</table>

**Info**

Turn clockwise to increase damping; turn counterclockwise to reduce damping.
13 SERVICE WORK ON THE CHASSIS

13.1 Raising the motorcycle with rear lifting gear

<table>
<thead>
<tr>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Danger of damage</strong>  The parked vehicle can roll away or fall over.</td>
</tr>
</tbody>
</table>

- Park the vehicle on a firm and level surface.

- Mount the supports of the lifting gear.
- Insert the adapter in the rear lifting gear.

<p>| |</p>
<table>
<thead>
<tr>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Retaining adapter (61029955244)</td>
</tr>
<tr>
<td>Rear wheel work stand (69329955000)</td>
</tr>
</tbody>
</table>

- Stand the motorcycle upright, align the lifting gear to the link fork and the adapters, and raise the motorcycle.

13.2 Removing the rear of the motorcycle from the lifting gear

<table>
<thead>
<tr>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Danger of damage</strong>  The parked vehicle can roll away or fall over.</td>
</tr>
</tbody>
</table>

- Park the vehicle on a firm and level surface.

- Secure the motorcycle against falling over.
- Remove the rear lifting gear and lean the vehicle on side stand 1.
- Remove bushings kit.

13.3 Lifting the motorcycle with the front lifting gear

<table>
<thead>
<tr>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Danger of damage</strong>  The parked vehicle can roll away or fall over.</td>
</tr>
</tbody>
</table>

- Park the vehicle on a firm and level surface.

<table>
<thead>
<tr>
<th>Preparatory work</th>
</tr>
</thead>
<tbody>
<tr>
<td>Raise the motorcycle with the rear lifting gear. ([p. 66])</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Remove protection cap 1.</td>
</tr>
</tbody>
</table>
13.4 Taking the motorcycle off the front lifting gear

**Note**

**Danger of damage**  The parked vehicle can roll away or fall over.
- Park the vehicle on a firm and level surface.

**Main work**
- Secure the motorcycle against falling over.
- Remove the front lifting gear.

- Mount protection cap 1.

**Finishing work**
- Remove the rear of the motorcycle from the lifting gear.  (☞ p. 66)

13.5 Cleaning the dust boots of the fork legs

**Preparatory work**
- Raise the motorcycle with the rear lifting gear.  (☞ p. 66)
- Lift the motorcycle with the front lifting gear.  (☞ p. 66)
- Remove front fender.  (☞ p. 75)
Main work
- Push dust boots 1 of both fork legs downward.

Info
The dust boots remove dust and coarse dirt particles from the inside fork tubes. Over time, dirt can accumulate behind the dust boots. If this dirt is not removed, the oil seals behind can start to leak.

Warning
Danger of accidents Oil or grease on the brake discs reduces the braking effect.
- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

- Clean and oil the dust boots and inside fork tubes of both fork legs.
- Press the dust boots back into the installation position.
- Remove the excess oil.

Finishing work
- Install the front fender. (p. 76)
- Take the motorcycle off the front lifting gear. (p. 67)
- Remove the rear of the motorcycle from the lifting gear. (p. 66)

13.6 Removing the passenger seat
- Insert the ignition key in seat lock 1 and turn it clockwise.
- Raise the rear of the seat, push it towards the rear, and lift it off.
- Remove the ignition key from the seat lock.

13.7 Mounting the passenger seat
- Attach hooks 1 on the passenger seat to seat mounting 2 on the subframe, and lower it at the rear while pushing forward.
- Press passenger seat downward until it clicks into place.
Warning

Danger of accidents  The seat can come loose from the anchoring if it is not mounted correctly.
– After assembly, check whether the seat is correctly locked and cannot be pulled up.

– Finally, check that the passenger seat is correctly mounted.

13.8 Removing the front rider's seat

Preparatory work
– Remove the passenger seat. ( p. 68)

Main work
– Raise the rear of the front rider's seat, pull it towards the rear, and remove it upwards.

13.9 Mounting the front rider's seat

Main work
– Attach the front rider's seat in area A and lower at the rear.
– Finally, check that the front rider's seat is correctly mounted.

Finishing work
– Mount the passenger seat. ( p. 68)

13.10 Checking for chain dirt accumulation

– Check the chain for coarse dirt accumulation.
  » If the chain is very dirty:
    – Clean the chain. ( p. 70)
13 SERVICE WORK ON THE CHASSIS

13.11 Cleaning the chain

**Warning**

*Danger of accidents* Lubricants on the tires reduces the road grip.
- Remove lubricants from the tires using a suitable cleaning agent.

**Warning**

*Danger of accidents* Oil or grease on the brake discs reduces the braking effect.
- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

**Note**

*Environmental hazard* Hazardous substances cause environmental damage.
- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

---

**Info**

The service life of the chain depends largely on its maintenance.

---

**Preparatory work**

- Raise the motorcycle with the rear lifting gear. (p. 66)

**Main work**

- Clean the chain regularly.
- Rinse off loose dirt with a soft jet of water.
- Remove old grease remains with chain cleaner.

| Chain cleaner (p. 128) |

| Street chain spray (p. 128) |

**Finishing work**

- After drying, apply chain spray.

---

**13.12 Checking the chain tension**

**Warning**

*Danger of accidents* Incorrect chain tension damages components and results in accidents.

If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded.

If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.

- Check the chain tension regularly.
- Set the chain tension in accordance with the specification.

---

**Preparatory work**

- Raise the motorcycle with the rear lifting gear. (p. 66)
13.13 Adjusting the chain tension

**Main work**
- Shift the transmission into neutral.
- In the area after the chain sliding guard, press the chain upward toward the link fork and measure chain tension \( A \).

**Info**
Top chain section \( B \) must be taut.
Chain wear is not always even, so you should repeat this measurement at different chain positions.

<table>
<thead>
<tr>
<th>Chain tension</th>
<th>5 ( \ldots ) 7 mm (0.2 ( \ldots ) 0.28 in)</th>
</tr>
</thead>
</table>

- If the chain tension does not meet the specification:
  - Adjust the chain tension. (p. 71)
- Remove the rear of the motorcycle from the lifting gear. (p. 66)

**Warning**

**Danger of accidents** Incorrect chain tension damages components and results in accidents.

- If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded.
- If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.

  - Check the chain tension regularly.
  - Set the chain tension in accordance with the specification.

**Preparatory work**
- Raise the motorcycle with the rear lifting gear. (p. 66)
- Check the chain tension. (p. 70)

**Main work**
- Loosen nut \( 1 \).
- Loosen nuts \( 2 \).
- Adjust the chain tension by turning adjusting screws \( 3 \) left and right.

**Guideline**

<table>
<thead>
<tr>
<th>Chain tension</th>
<th>5 ( \ldots ) 7 mm (0.2 ( \ldots ) 0.28 in)</th>
</tr>
</thead>
</table>

Turn the adjusting screws \( 3 \) on the left and right so that the markings on the left and right chain adjusters \( 4 \) are in the same position relative to the reference marks \( A \). The rear wheel is then correctly aligned.

**Info**
The top chain section must be taut.
Chain wear is not always even, so you should check the setting at different chain positions.

- Tighten nuts \( 2 \).
13 SERVICE WORK ON THE CHASSIS

13.14 Checking the chain, rear sprocket, and engine sprocket

Preparatory work
– Raise the motorcycle with the rear lifting gear. (p. 66)

Main work
– Check the rear sprocket and engine sprocket for wear.
  » If the rear sprocket and engine sprocket are worn:
    – Change the drivetrain kit.

Info
The engine sprocket, rear sprocket, and chain should always be replaced together.

– Shift the transmission into neutral.
– Pull on the lower chain section with the specified weight A.

Guideline
Weight, chain wear measurement
15 kg (33 lb.)

– Measure distance B of 20 chain rollers in the lower chain section.

Info
Chain wear is not always even, so you should repeat this measurement at different chain positions.

Maximum distance B from 20 chain rollers at the longest chain section
301.6 mm (11.874 in)

» If distance B is greater than the specified measurement:
  – Change the drivetrain kit.

Info
When a new chain is mounted, the rear sprocket and engine sprocket should also be changed. New chains wear out faster on old, worn sprockets.
Check the chain sliding guard for wear.

» If screw 1 becomes visible in area C of the chain sliding guard when viewed from above:
  - Change the chain sliding guard.

» Check that the chain sliding guard is firmly seated.
  - If the chain sliding guard is loose:
    - Tighten the screw of the chain sliding guard.

Guideline

<table>
<thead>
<tr>
<th>Screw, chain guard</th>
<th>M5</th>
<th>7 Nm (5.2 lbf ft)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Loctite® 243™</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Finishing work

- Remove the rear of the motorcycle from the lifting gear. (p. 66)

---

13.15 Removing motor guard

- Remove screws 1.
- Take off the engine guard.
13.16 Installing the motor guard

- Position the engine guard, mount and tighten screws 1.

Guideline

<table>
<thead>
<tr>
<th>Screw, engine guard</th>
<th>M6</th>
<th>9 Nm (6.6 lbf ft)</th>
<th>Loctite® 243™</th>
</tr>
</thead>
</table>

13.17 Removing the engine guard retaining bracket

Preparatory work
- Remove motor guard. (p. 73)

Main work
- Remove screws 1.
- Remove the engine guard retaining bracket.
13.18 Installing the engine guard retaining bracket

Main work
- Position the engine guard retaining bracket, mount and tighten screws 1.

Guideline

| Screw, engine guard retaining bracket | M6 | 9 Nm (6.6 lbf ft) Loctite®243™ |

Finishing work
- Install the motor guard. (\(\text{p. 74}\))

13.19 Removing front fender

- Remove screws 1. Take off the front fender.
13.20 Installing the front fender

Position the front fender. Mount and tighten screws 1.

Guideline

| Remaining screws, chassis | M6 | 9 Nm (6.6 lbf ft) |

---

13 SERVICE WORK ON THE CHASSIS
The ABS unit 1, which consists of a hydraulic unit, ABS control unit, and return pump, is installed under the fuel tank. One wheel speed sensor 2 is located in each case on the front and the rear wheel.

**Warning**

**Danger of accidents** Changes to the vehicle impair the function of the ABS.
- Do not make any changes to the suspension travel.
- Only use spare parts on the brake system which have been approved and recommended by KTM.
- Only use tires/wheels approved by KTM with the corresponding speed index.
- Maintain the specified tire pressure.
- Ensure that service work and repairs are performed professionally. (Your authorized KTM workshop will be glad to help.)

The ABS is a safety system that prevents locking of the wheels when driving straight ahead or when cornering (within the limits of physics).

**Warning**

**Danger of accidents** Driving aids can reduce the probability of a fall only within physical limits. It is not always possible to compensate for extreme riding situations, for example with luggage loaded with a high center of gravity, varying road surfaces, steep descents or full braking without disengaging the gear.
- Adapt your riding style to the road conditions and your driving ability.

**Info**

In the Offroad ABS mode, the rear wheel may lock and there is a risk of falling. The curve dependent control is only active in ABS mode Road.

The ABS has two operating modes: the Road and Offroad ABS modes. In the Road ABS mode, the ABS controls both wheels. In the ABS mode Offroad, the ABS only controls the front wheel. The ABS warning lamp 3 flashes slowly to remind you that the Offroad ABS mode is enabled.

In the Offroad ABS mode, the rear wheel may lock and there is a risk of falling. The curve dependent control is only active in ABS mode Road.

The ABS operates with two independent brake circuits (front and rear brakes). During normal operation, the brake system operates like a conventional brake system without ABS. When the ABS control unit detects a locking tendency in a wheel, ABS begins regulating the brake pressure. The control function causes a slight pulsing of the hand and foot brake levers.
The ABS warning lamp must light up after the ignition is switched on and go out after starting off. If it does not go out after starting off or if it lights up while riding, this indicates a malfunction in the antilock brake system. In this case, the ABS is no longer enabled and the wheels may lock during braking. The brake system itself stays functional; only ABS control is not available.

The ABS warning lamp may also light up if the rotating speeds of the front and rear wheels differ greatly under extreme riding conditions, for example when making “wheelies” or if the rear wheel spins. This causes the ABS to switch off.

To reactivate the ABS, stop the vehicle and switch off the ignition. The ABS is reactivated when the vehicle is switched on again. The ABS warning lamp goes out after starting off.

## 14.2 Checking the brake discs

### Warning

**Danger of accidents** Worn-out brake discs reduce the braking effect.
- Make sure that worn-out brake discs are replaced immediately. (Your authorized KTM workshop will be glad to help.)

### Info

Wear will reduce the thickness of the brake disc at contact surface of the brake linings.

<table>
<thead>
<tr>
<th>Brake discs - wear limit</th>
<th>front</th>
<th>4.5 mm (0.177 in)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>rear</td>
<td>3.6 mm (0.142 in)</td>
</tr>
</tbody>
</table>

- If the brake disc thickness is less than the specified value.
  - Change the front brake disc.
  - Change the rear brake disc.

- Check the front and rear brake discs for damage, cracking, and deformation.

  - If the brake disc exhibits damage, cracking, or deformation:
    - Change the front brake disc.
    - Change the rear brake disc.
14.3 Checking the front brake fluid level

**Warning**

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the MIN marking, the brake system is leaking or the brake linings are worn down.

- Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

**Warning**

**Danger of accidents** Old brake fluid reduces the braking effect.

- Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

![Image](image.png)

- Move the brake reservoir mounted on the handlebar into a horizontal position.
- Check the brake fluid level in the level viewer 1.
  - If the brake fluid level is below the MIN marking:
    - Add the front brake fluid. (p. 79)

14.4 Adding the front brake fluid

**Warning**

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the MIN marking, the brake system is leaking or the brake linings are worn down.

- Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

**Warning**

**Skin irritation** Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

**Warning**

**Danger of accidents** Old brake fluid reduces the braking effect.

- Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)
14 BRAKE SYSTEM

Note

Environmental hazard Hazardous substances cause environmental damage.
– Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.
Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.
Only use clean brake fluid from a sealed container.

Preparatory work
– Check the front brake linings. (p. 80)

Main work
– Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
– Remove screws 1.
– Take off cover 2 with membrane 3.
– Add brake fluid to level A.

Guideline

<table>
<thead>
<tr>
<th>Dimension A</th>
<th>5 mm (0.2 in)</th>
</tr>
</thead>
</table>

– Position the cover with the membrane. Mount and tighten the screws.

Info

Immediately clean up any brake fluid that has overflowed or spilled with water.

14.5 Checking the front brake linings

Warning

Danger of accidents Worn-out brake linings reduce the braking effect.
– Ensure that worn-out brake linings are replaced immediately. (Your authorized KTM workshop will be glad to help.)

Warning

Danger of accidents Damaged brake discs reduce the braking effect.
If the brake linings are not changed in time, the brake lining carriers grind against the brake disc. As a consequence, the braking effect is greatly reduced and the brake discs are destroyed.
– Check the brake linings regularly.
14.6 Checking the free travel of foot brake lever

**Warning**

**Danger of accidents** The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

- Set the free travel on the foot brake lever in accordance with the specification.

- Disconnect spring 1.
- Move the foot brake lever back and forth between the end stop and the contact to the foot brake cylinder piston and check free travel A.

**Guideline**

Free travel at foot brake lever 3 … 5 mm (0.12 … 0.2 in)

- If the free travel does not meet specifications:
  - Adjust the free travel of the foot brake lever. (p. 81)
- Reconnect spring 1.

14.7 Adjusting the free travel of the foot brake lever

**Warning**

**Danger of accidents** The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

- Set the free travel on the foot brake lever in accordance with the specification.
14 BRAKE SYSTEM

14.8 Checking the rear brake fluid level

**Warning**
**Danger of accidents**  An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the **MIN** marking, the brake system is leaking or the brake linings are worn down.

– Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

**Warning**
**Danger of accidents**  Old brake fluid reduces the braking effect.

– Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

– Stand the vehicle upright.
– Check the brake fluid level in the brake fluid reservoir.
  > If the fluid level reaches the **MIN** marking 1:
    – Add rear brake fluid. (p. 83)
14.9 Adding rear brake fluid

**Warning**

Danger of accidents  An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the MIN marking, the brake system is leaking or the brake linings are worn down.

- Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

**Warning**

Skin irritation  Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

**Warning**

Danger of accidents  Old brake fluid reduces the braking effect.

- Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

**Note**

Environmental hazard  Hazardous substances cause environmental damage.

- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

**Info**

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.

Only use clean brake fluid from a sealed container.

---

**Preparatory work**

- Check the rear brake linings. ([p. 84](#))

**Main work**

**Condition**

- The screw cap is locked.

- Remove screw 1 and take off the screw cap lock.
Position the vehicle upright.
- Remove screw cap 2 with membrane 3.
- Add brake fluid up to the marking A.

### Brake fluid DOT 4 / DOT 5.1
- Mount the screw cap with the membrane.

#### Info
Immediately clean up any brake fluid that has overflowed or spilled with water.

### Condition
The screw cap is locked.
- Position the screw cap lock and mount and tighten screw 1.

#### Guideline
| Screw, compensating tank cap lock, rear brake | M5 | 9 Nm (6.6 lbf ft) |

### 14.10 Checking the rear brake linings

#### Warning
**Danger of accidents**
Worn-out brake linings reduce the braking effect.
- Ensure that worn-out brake linings are replaced immediately. (Your authorized KTM workshop will be glad to help.)

#### Warning
**Danger of accidents**
Damaged brake discs reduce the braking effect.
If the brake linings are not changed in time, the brake lining carriers grind against the brake disc. As a consequence, the braking effect is greatly reduced and the brake discs are destroyed.
- Check the brake linings regularly.

- Check the brake linings for minimum thickness A.
  - If the minimum thickness is less than specified:
    - Change the rear brake linings.
  - Check the brake linings for damage and cracking.
    - If there is wear or tearing:
      - Change the rear brake linings.
### 15.1 Removing the front wheel

**Preparatory work**
- Raise the motorcycle with the rear lifting gear. (p. 66)
- Lift the motorcycle with the front lifting gear. (p. 66)
- Remove front fender. (p. 75)

**Main work**
- Remove screw 1 and pull wheel speed sensor 2 out of the hole.
- Loosen screw 3 by several rotations.
- Loosen screws 4.
- Press on screw 3 to push the wheel spindle out of the axle clamp.
- Remove screw 3.

---

**Warning**

**Danger of accidents** Damaged brake discs reduce the braking effect.
- Always lay the wheel down in such a way that the brake disc is not damaged.

---

**Info**

Do not actuate the hand brake lever when the front wheel is removed.

---

### 15.2 Installing the front wheel

**Warning**

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.
- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

---

- Check the wheel bearing for damage and wear.
  - If the wheel bearing is damaged or worn:
    - Change front wheel bearing.
- Remove the spacers.
- Clean and grease shaft seal rings 1 and contact surfaces A of the spacers.
- Insert the spacers.
– Clean the thread of the wheel spindle and screw 2.
– Clean and grease the wheel spindle.
– Position the front wheel and insert the wheel spindle.
  ✓ The brake linings are correctly positioned.
– Mount and tighten screw 2.
  Guideline

<table>
<thead>
<tr>
<th>Component</th>
<th>Size</th>
<th>Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>Screw, front wheel spindle</td>
<td>M8</td>
<td>25 Nm (18.4 lbf ft)</td>
</tr>
</tbody>
</table>

– Position wheel speed sensor 3 in the hole.
– Mount and tighten screw 4.
  Guideline

<table>
<thead>
<tr>
<th>Component</th>
<th>Size</th>
<th>Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>Screw, wheel speed sensor holder</td>
<td>M6</td>
<td>8 Nm (5.9 lbf ft)</td>
</tr>
</tbody>
</table>

– Operate the hand brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.
– Take the motorcycle off the front lifting gear. (p. 67)
– Remove the rear of the motorcycle from the lifting gear. (p. 66)
– Operate the front brake and compress the fork a few times firmly.
  ✓ The fork legs straighten.
– Tighten screws 5.
  Guideline

<table>
<thead>
<tr>
<th>Component</th>
<th>Size</th>
<th>Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>Screw, fork stub</td>
<td>M8</td>
<td>15 Nm (11.1 lbf ft)</td>
</tr>
</tbody>
</table>

### 15.3 Removing the rear wheel

#### Preparatory work
– Raise the motorcycle with the rear lifting gear. (p. 66)

#### Main work
– Remove screw 1.
- Remove screw 2 and pull wheel speed sensor 3 out of the hole.
- Remove nut 4 and washer.
- Take off chain adjuster 5.
- Holding the rear wheel, withdraw wheel spindle 6 with the washer and chain adjuster 5.
- Push the rear wheel forward as far as possible and take the chain off the rear sprocket.
- Push chain guard to the side.

**Warning**

**Danger of accidents**  Damaged brake discs reduce the braking effect.
- Always lay the wheel down in such a way that the brake disc is not damaged.

- Pull the rear wheel back and take it out of the link fork.

**Info**

Do not operate the foot brake lever when the rear wheel is removed.

---

### 15.4 Installing the rear wheel

**Warning**

**Danger of accidents**  Oil or grease on the brake discs reduces the braking effect.
- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

**Warning**

**Danger of accidents**  There is no braking effect to start with at the rear brake after installing the rear wheel.
- Actuate the foot brake several times before going on a ride until you can feel a firm pressure point.

---

**Main work**

- Check the wheel bearing for damage and wear.
  - If the wheel bearing is damaged or worn:
    - Change the rear wheel bearing.
- Remove the spacers.
- Clean and grease shaft seal rings 1 and contact surfaces A of the spacers.
- Clean the thread of the wheel spindle and axle nut.
- Clean and grease wheel spindle.
- Clean the contact areas on the brake caliper bracket and link fork.

**Long-life grease** (p. 128)
– Mount the damping rubber and rear sprocket carrier on the rear wheel.
– Insert the spacers.
– Position the rear wheel.

  ✓ The brake linings are correctly positioned.
– Push the rear wheel forward as far as possible and lay the chain on the rear sprocket.
– Position the chain guard.

– Pull the rear wheel back and mount wheel spindle 3 with the washer and chain adjuster 4.

  Guideline

  Mount left and right chain adjusters 4 in the same position.

– Mount nut 2 and the washer.
– Push the rear wheel forward so that the chain adjusters are in contact with the screws, and tighten nut 2.

  Guideline

  In order for the rear wheel to be correctly aligned, the markings on the left and right chain adjusters must be in the same position relative to reference markings 6.

<table>
<thead>
<tr>
<th>Nut, rear wheel spindle</th>
<th>M14x1.5</th>
<th>100 Nm (73.8 lbf ft)</th>
</tr>
</thead>
</table>

– Position wheel speed sensor 5 in the hole.
– Mount and tighten screw 6.

  Guideline

<table>
<thead>
<tr>
<th>Screw, wheel speed sensor holder</th>
<th>M6</th>
<th>8 Nm (5.9 lbf ft)</th>
</tr>
</thead>
</table>

– Mount and tighten screw 7.

  Guideline

<table>
<thead>
<tr>
<th>Screw, chain guard</th>
<th>EJOT PT® K60x30</th>
<th>3 Nm (2.2 lbf ft)</th>
</tr>
</thead>
</table>

**Finishing work**
– Remove the rear of the motorcycle from the lifting gear. (p. 66)
– Check the chain tension. (p. 70)
15.5 Checking the rear hub damping rubber pieces

**Info**
The engine power is transmitted from the rear sprocket to the rear wheel via the six damping rubber pieces. They eventually wear out during operation. If the damping rubber pieces are not changed in time, the rear sprocket carrier and the rear hub will be damaged.

**Preparatory work**
- Raise the motorcycle with the rear lifting gear. (p. 66)
- Remove the rear wheel. (p. 86)

**Main work**
- Check bearing 1.
  - If the bearing is damaged or worn:
    - Change the bearing.
- Check damping rubber pieces 2 of the rear hub for damage and wear.
  - If the damping rubber pieces of the rear hub are damaged or worn:
    - Change all the damping rubber pieces of the rear hub.
- Lay the rear wheel on a workbench with the rear sprocket facing upward and insert the wheel spindle in the hub.
- To check play A, hold the rear wheel tight and try to rotate the rear sprocket.

**Info**
Measure the play on the outside of the rear sprocket.

<table>
<thead>
<tr>
<th>Play of damping rubber pieces on rear wheel</th>
<th>≤ 5 mm (≤ 0.2 in)</th>
</tr>
</thead>
</table>

- If clearance A is larger than the specified value:
  - Change all the damping rubber pieces of the rear hub.

**Finishing work**
- Install the rear wheel. (p. 87)
- Remove the rear of the motorcycle from the lifting gear. (p. 66)
- Check the chain tension. (p. 70)

15.6 Checking the tire condition

**Warning**
**Danger of accidents** If a tire bursts while riding, the vehicle becomes uncontrollable.
- Ensure that damaged or worn tires are replaced immediately. (Your authorized KTM workshop will be glad to help.)
Warning
Danger of crashing  Different tire tread patterns on the front and rear wheel impair the handling characteristic.
Different tire tread patterns can make the vehicle significantly more difficult to control.
– Make sure that only tires with a similar tire tread pattern are fitted to the front and rear wheel.

Warning
Danger of accidents  Non-approved or non-recommended tires and wheels impact the handling characteristic.
– Only use tires/wheels approved by KTM with the corresponding speed index.

Info
The type, condition, and pressure of the tires all have a major impact on the handling characteristic of the motorcycle.
Worn tires have a negative effect on handling characteristics, especially on wet surfaces.

– Check the front and rear tires for cuts, run-in objects, and other damage.
  » If the tires have cuts, run-in objects, or other damage:
    – Change the tires.
  – Check the tread depth.

  » If the tread depth is less than the minimum tread depth:
    – Change the tires.

– Check the tire age.

  » If the tires are more than 5 years old:
    – Change the tires.
15.7 Checking tire pressure

Info
Low tire pressure leads to abnormal wear and overheating of the tire. Correct tire pressure ensures optimal riding comfort and maximum tire service life.

- Remove the protection cap.
- Check the tire pressure when the tires are cold.

<table>
<thead>
<tr>
<th></th>
<th>front</th>
<th>rear</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tire pressure when solo</td>
<td>2.0 bar (29 psi)</td>
<td>2.0 bar (29 psi)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th></th>
<th>front</th>
<th>rear</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tire pressure with passenger / full payload</td>
<td>2.0 bar (29 psi)</td>
<td>2.2 bar (32 psi)</td>
</tr>
</tbody>
</table>

» If the tire pressure does not meet specifications:
  - Correct the tire pressure.
  - Mount the protection cap.
16.1 Removing the 12-V battery

**Warning**  
**Risk of injury** Battery acid and battery gases cause serious chemical burns.  
- Keep 12 V batteries out of the reach of children.  
- Wear suitable protective clothing and safety glasses.  
- Avoid contact with battery acid and battery gases.  
- Keep sparks or open flames away from the 12 V battery.  
- Only charge 12 V batteries in well-ventilated rooms.  
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.  
- Rinse eyes with water for at least 15 minutes and consult a doctor immediately if battery acid and battery gases get into the eyes.

**Preparatory work**  
- Remove the passenger seat. ([p. 68](#))  
- Remove the front rider’s seat. ([p. 69](#))

**Main work**  
- Remove screws 1 and take off the holding bracket.  
- Disconnect negative cable 2 from the 12-V battery.

- Pull back positive terminal cover 3.  
- Disconnect positive cable 4 from the 12-V battery.  
- Unhook rubber strap 5 and open rubber strap 6.  
- Pull the 12-V battery upwards and out of the battery compartment.

**Info**  
Never operate the motorcycle with a discharged 12-V battery or without a 12-V battery. In both cases, electrical components and safety devices can be damaged. The vehicle will therefore no longer be roadworthy.

16.2 Installing the 12-V battery

**Main work**  
- Position the 12-V battery in the battery compartment.  
- Connect positive cable 3 and mount and tighten the screw.  
- Position positive terminal cover 4.
- Position negative cable 5 and mount and tighten the screw.
- Position the holding bracket, mount and tighten screws 6.

**Guideline**

| Screw, cross connector | M6 | 15 Nm (11.1 lbf ft) |

**Finishing work**
- Mount the front rider’s seat. ([p. 69](#))
- Mount the passenger seat. ([p. 68](#))
- Set the time and date. ([p. 40](#))

## 16.3 Charging the 12-V battery

**Warning**

**Risk of injury**  Battery acid and battery gases cause serious chemical burns.
- Keep 12 V batteries out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Avoid contact with battery acid and battery gases.
- Keep sparks or open flames away from the 12 V battery.
- Only charge 12 V batteries in well-ventilated rooms.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes with water for at least 15 minutes and consult a doctor immediately if battery acid and battery gases get into the eyes.

**Note**

**Environmental hazard**  12 V batteries contain environmentally hazardous materials.
- Do not dispose of 12 V batteries as household waste.
- Dispose of 12 V batteries at a collection point for used batteries.

**Info**

Even when there is no load on the 12-V battery, it discharges steadily each day. The charging level and the method of charging are very important for the service life of the 12-V battery. Rapid recharging with a high charging current shortens the service life of the battery. If the charging current, charging voltage, or charging time is exceeded, electrolyte escapes through the safety valves. This reduces the capacity of the 12-V battery. If the 12-V battery is depleted by repeated starting, the 12-V battery must be charged immediately. If the 12-V battery is left in a discharged state for an extended period, it will become deeply discharged and sulfating occurs, destroying the battery. The 12-V battery is maintenance-free. The acid level does not have to be checked.

**Preparatory work**
- Remove the passenger seat. ([p. 68](#))
- Remove the front rider's seat. ([p. 69](#))
- Disconnect negative cable of the 12-V battery to avoid damage to the onboard electronics.
Main work
– Connect a battery charger to the 12-V battery. Switch on the battery charger.

| Battery charger (58429074000) |

In addition, this battery charger can be used to test the open-circuit voltage, the starting ability of the 12-V battery, and the alternator. It is impossible to overcharge the 12-V battery using this device.

Info
Never remove cover 1.
Charge the 12-V battery to a maximum of 10 % of the capacity specified on battery housing 2.

– Switch off the battery charger after charging and disconnect from the 12-V battery.

Guideline

| The charging current, charging voltage, and charging time must not be exceeded. | 3 months |
| Recharge the 12-V battery regularly when the motorcycle is not being used |

– Position the negative cable and mount and tighten the screw.
– Position the negative terminal cover.

Finishing work
– Mount the front rider’s seat. (p. 69)
– Mount the passenger seat. (p. 68)
– Set the time and date. (p. 40)

### 16.4 Changing the main fuse

**Warning**
**Fire hazard** Incorrect fuses overload the electrical system.
– Only use fuses with the required ampere value.
– Do not bypass or repair fuses.

**Info**
The main fuse protects all electrical power consumers of the vehicle. The main fuse is under the seat.

**Preparatory work**
– Remove the passenger seat. (p. 68)
– Remove the front rider’s seat. (p. 69)
Main work

- Remove cover 1.

- Remove protection cap 2.

- Remove faulty main fuse 3.

**Info**

A faulty fuse has a burned-out fuse wire A. A spare fuse is located in the fuse box.

- Insert a new main fuse.

  Fuse (75011088030) (p. 122)

**Tip**

Put a spare fuse in the fuse box so that it is available if needed.

- Mount protection cap 2.

Finishing work

- Mount the front rider’s seat. (p. 69)
- Mount the passenger seat. (p. 68)
- Set the time and date. (p. 40)
16 ELECTRICAL SYSTEM

16.5 Changing the ABS fuses

**Warning**
*Fire hazard* Incorrect fuses overload the electrical system.
- Only use fuses with the required ampere value.
- Do not bypass or repair fuses.

**Info**
Two fuses for the ABS are located under the passenger seat. These fuses protect the return pump and the hydraulic unit of the ABS. The third fuse, which protects the ABS control unit, is located in the fuse box.

**Preparatory work**
- Remove the passenger seat. (p. 68)

To change the fuse of the ABS hydraulic unit:
- Take off the protection cap and remove fuse 1.

**Info**
A faulty fuse has a burned-out fuse wire A.

**Warning**
*Fire hazard* Incorrect fuses overload the electrical system.
- Only use fuses with the required ampere value.
- Do not bypass or repair fuses.

- Insert the spare fuse with the correct rating.

**Tip**
Insert spare fuse 2 in the fuse box so that it is available if needed.

- Mount the protection cap.

To change the fuse of the ABS return pump:
- Take off the protection cap and remove fuse 3.

**Info**
A faulty fuse has a burned-out fuse wire A.

**Warning**
*Fire hazard* Incorrect fuses overload the electrical system.
- Only use fuses with the required ampere value.
- Do not bypass or repair fuses.

- Insert the spare fuse with the correct rating.

**Info**
Fuse (75011088015) (p. 122)

**Info**
Fuse (90111088025) (p. 122)
16.6 Changing the fuses of individual electrical power consumers

Info
The fuse box containing the fuses of individual electrical power consumers is located under the passenger seat.

Preparatory work
– Remove the passenger seat. ([p. 68]

Main work
– Open fuse box cover 1.
– Remove the faulty fuse.

Guideline

<table>
<thead>
<tr>

</tbody>
</table>

Info
A faulty fuse has a burned-out fuse wire A.

Warning
Fire hazard Incorrect fuses overload the electrical system.
– Only use fuses with the required ampere value.
– Do not bypass or repair fuses.

– Insert the spare fuse with the correct rating.

Fuse (75011088010) ([p. 122])
Fuse (75011088015) ([p. 122])
16 ELECTRICAL SYSTEM

Fuse (75011088030) (p. 122)

Tip
Put a spare fuse in the fuse box so that it is available if needed.

– Check the function of the electrical power consumer.
– Close the fuse box cover ①.

Finishing work
– Mount the passenger seat. (p. 68)

16.7 Changing the turn signal bulb

Note
Damage to reflector  Grease on the reflector reduces the light intensity. Grease on the bulb will evaporate due to the heat and be deposited on the reflector.

– Clean and degrease the bulbs before mounting.
– Do not touch the bulbs with your bare hands.

– Remove the screw on the rear of the turn signal housing.
– Carefully remove turn signal glass ①.
– Press bulb ② carefully into the socket, turn it counterclockwise by about 30°, and take it out of the socket.

Guideline
Do not touch the reflector with your fingers and keep it free from grease.

– Push the new bulb gently into the socket and turn it clockwise all the way in.

Turn signal (RY10W / socket BAU15s) (p. 122)

– Check that the turn signal is functioning properly.
– Position the turn signal glass.

Guideline
Insert holding lug A into cut-out B.

– Insert the screw and first turn counterclockwise until it engages in the thread with a small jerk. Tighten the screw lightly.
16.8 Checking the headlight setting

- Park the vehicle on a horizontal surface in front of a light-colored wall and make a mark at the height of the center of the low beam headlight.
- Make another mark at a distance $B$ under the first marking.

Guideline

| Distance $B$ | 5 cm (2 in) |

- Position the vehicle vertical to the wall at distance $A$ from the wall and switch on the low beam.

Guideline

| Distance $A$ | 5 m (16 ft) |

- The rider now mounts the motorcycle with luggage and passenger if applicable.
- Check the headlight setting.

The light-dark boundary must be exactly on the lower marking when the motorcycle is ready to be operated with the rider mounted along with any luggage and a passenger if applicable.

- If the boundary between light and dark does not meet specifications:
  - Adjust the headlight range. (p. 99)

16.9 Adjusting the headlight range

Preparatory work

- Check the headlight setting. (p. 99)

Main work

- Turn adjusting screw 1 to adjust the headlight range.

Info

Turn clockwise to increase the headlight range; turn counterclockwise to reduce the headlight range. If you have a payload, you may have to correct the headlight range.

Screw 1 also secures the headlight. Ensure the screw is always screwed in far enough.

- Set the headlight to marking $B$.

Guideline

The light-dark boundary must lie exactly on lower marking $B$ when the motorcycle is ready to operate with the rider mounted along with any luggage and a passenger if applicable.
16.10 Diagnostics connector

Diagnostics connector 1 is located under the passenger seat.

16.11 Front ACC1 and ACC2

Installation location

- The front power supplies ACC1 1 and ACC2 2 are located behind the headlight.

Info

The front power supplies ACC1 and ACC2 can be accessed under the cable cover of the headlight mask.

16.12 ACC1 and ACC2 rear

Installation location

- The rear power supplies ACC1 1 and ACC2 2 are located under the rear fairing next to the seat lock.
17.1 Cooling system

Water pump 1 in the engine ensures forced circulation of the coolant. The pressure resulting from the warming of the cooling system is regulated by a valve in radiator cap 2. Heat expansion causes excess coolant to flow into compensating tank 3. When the temperature falls, this surplus coolant is sucked back into the cooling system. This ensures that operating the vehicle at the specified coolant temperature will not result in a risk of malfunctions.

110 °C (230 °F)

The coolant is cooled by the air stream and two radiator fans 4, which are activated at high temperature. The lower the speed, the less the cooling effect. Dirty cooling fins also reduce the cooling effect.

**Info**
If the cooling system overheats, the maximum engine speed is limited.

17.2 Checking the antifreeze and coolant level

**Warning**

**Danger of scalding**  During motorcycle operation, the coolant gets very hot and is under pressure.
- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

**Warning**

**Danger of poisoning**  Coolant is toxic and a health hazard.
- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

**Condition**

The engine is cold.
Stand the motorcycle upright on a horizontal surface.

- Remove cap 1 of the compensating tank.
- Check the antifreeze in the coolant.
- Check the coolant level in the compensating tank.

- If the antifreeze in the coolant does not match the specified value:
  - Correct the antifreeze in the coolant.
- If the coolant level does not match the specified value:
  - Correct the coolant level.

The coolant level must be between the two markings.

- Mount the cap of the compensating tank.
- Remove screws 2 and take off the cover.
- Remove radiator cap 3.
- Check the antifreeze in the coolant.

- If the antifreeze in the coolant does not match the specified value:
  - Correct the antifreeze in the coolant.
- Check the coolant level in the radiator.

The radiator must be filled completely.

- If the coolant level does not match the specified value:
  - Check the coolant level and the reason for the loss.

- If you had to add more coolant than the specified amount: > 0.20 l (> 0.21 qt.)
  - Fill/bleed the cooling system. (p. 104)
- Mount the radiator cap.
- Position the cover, mount and tighten screws 2.

Guideline

### 17.3 Checking the coolant level

**Warning**

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.
**Warning**

**Danger of poisoning** Coolant is toxic and a health hazard.
- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

---

**Condition**

The engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Check the coolant level in compensating tank 1.
  
  The coolant level must be between the two markings.

  » If the coolant level does not match the specified value:
    - Correct the coolant level.

  Coolant (p. 126)

- Remove screws 2 and take off the cover.
- Remove radiator cap 3 and check the coolant level in the radiator.

  The radiator must be filled completely.

  » If the coolant level does not match the specified value:
    - Check the coolant level and the reason for the loss.
  » If you had to add more coolant than the specified amount:
    - Fill/bleed the cooling system. (p. 104)
    - Mount the radiator cap.
    - Position the cover, mount and tighten screws 2.

---

**17.4 Draining the coolant**

**Warning**

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.
- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.
17 COOLING SYSTEM

**Warning**

**Danger of poisoning**  Coolant is toxic and a health hazard.
- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

---

**Condition**
The engine is cold.

**Preparatory work**
- Remove motor guard. (p. 73)

**Main work**
- Position the motorcycle upright.
- Position an appropriate container under the engine.
- Remove screw 1 with the seal ring.
- Remove the radiator cap.
- Completely drain the coolant.
- Mount and tighten screw 1 with a new seal ring.

**Guideline**

| Screw plug, water pump drain hole | M6 | 10 Nm (7.4 lbf ft) |

---

17.5 Filling/bleeding the cooling system

**Warning**

**Danger of poisoning**  Coolant is toxic and a health hazard.
- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

**Main work**
- Remove screws 1 and take off the cover.
- Remove radiator cap 2.
17.6 Changing the coolant

**Warning**  Danger of scalding  During motorcycle operation, the coolant gets very hot and is under pressure.
- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

---

- Remove screws 3 and take off the cover.
- Loosen bleeder screw 4.

**Guideline**

| 3 turns |

- Tilt the vehicle slightly to the right.
- Pour in the coolant until it emerges without bubbles at the bleeder screw, and then mount and tighten the bleeder screw immediately.

**Coolant** (p. 126)

- Completely fill the radiator with coolant. Mount the radiator cap.
- Rest the vehicle on the side stand.

---

**Danger**  Danger of poisoning  Exhaust gases are toxic and inhaling them may result in unconsciousness and death.
- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.

---

- Start the engine and allow it to warm up.
- Stop the engine and allow it to cool down.
- When the engine is cool, check the coolant level in the radiator and, if necessary, add coolant.
- Remove cap 5 of the compensating tank and top up the coolant level to the upper marking.
- Mount the cap of the compensating tank.
- Position the cover, mount and tighten screws 1 and 3.

**Guideline**

| Remaining screws, chassis | M5 | 5 Nm (3.7 lbf ft) |

**Finishing work**
- Install the motor guard. (p. 74)
Warning
Danger of poisoning  Coolant is toxic and a health hazard.
– Keep coolant out of the reach of children.
– Do not allow coolant to come into contact with the skin, the eyes and clothing.
– Consult a doctor immediately if coolant is swallowed.
– Rinse the affected area immediately with plenty of water in the event of contact with the skin.
– Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
– Change clothing if coolant spills onto your clothing.

Condition
The engine is cold.

Preparatory work
– Remove motor guard. (p. 73)

Main work
– Position the motorcycle upright.
– Position an appropriate container under the engine.
– Remove screw 1 with the seal ring.
– Remove screws 2 and take off the cover.
– Remove radiator cap 3.
– Completely drain the coolant.
– Mount and tighten screw 1 with a new seal ring.

Guideline
Screw plug, water pump drain hole  M6  10 Nm (7.4 lbf ft)

– Remove screws 4 and take off the cover.
– Loosen bleeder screw 5.

Guideline
3 turns
– Tilt the vehicle slightly to the right.
– Pour in the coolant until it emerges without bubbles at the bleeder screw, and then mount and tighten the bleeder screw immediately.

Coolant (p. 126)
– Completely fill the radiator with coolant. Mount the radiator cap.
– Rest the vehicle on the side stand.
Danger

Danger of poisoning  Exhaust gases are toxic and inhaling them may result in unconsciousness and death.
– Always make sure there is sufficient ventilation when running the engine.
– Use effective exhaust extraction when starting or running the engine in an enclosed space.

– Start the engine and allow it to warm up.
– Stop the engine and allow it to cool down.
– When the engine is cool, check the coolant level in the radiator and, if necessary, add coolant.
– Remove cap 6 of the compensating tank and top up the coolant level up to the MAX marking.
– Mount the cap of the compensating tank.
– Position the cover, mount and tighten screws 2 and 4.

Guideline

<table>
<thead>
<tr>
<th>Remaining screws, chassis</th>
<th>M5</th>
<th>5 Nm (3.7 lbf ft)</th>
</tr>
</thead>
</table>

Finishing work
– Install the motor guard. (p. 74)
18.1 Checking the clutch lever play

**Note**

**Clutch damage** If there is no free travel by the clutch lever, the clutch will begin to slip.

- Check the free travel of the clutch lever each time before using the motorcycle.
- Adjust the free travel of the clutch lever when necessary in accordance with the specification.

- Check the clutch lever for smooth operation.
- Move the handlebar to the straight-ahead position.
- Pull the clutch lever until resistance is perceptible, and determine the play in the clutch lever $A$.

| Clutch lever play $A$ | 1 ... 3 mm (0.04 ... 0.12 in) |

- If the clutch lever play does not meet the specified value:
  - Adjust play in the clutch lever. (p. 108)
- Move the handlebar to and fro over the entire steering range.

The clutch lever play must not change.

- If the clutch lever play changes:
  - Check the routing of the clutch cable.

18.2 Adjusting play in the clutch lever

- Move the handlebar to the straight-ahead position.
- Push back sleeve $1$.
- Loosen lock nut $2$.
- Adjust the play in the clutch level $A$ by turning adjusting screw $3$.

**Guideline**

| Clutch lever play $A$ | 1 ... 3 mm (0.04 ... 0.12 in) |

- Tighten lock nut $2$.
- Position bellows $1$.
19.1 Checking the engine oil level

**Condition**
The engine is at operating temperature.

**Preparatory work**
– Stand the motorcycle upright on a horizontal surface.

**Main work**
– Check the engine oil level.

**Info**
After switching off the engine, wait one minute before checking the level.

The engine oil must be between the A and B markings.

* When the engine oil level is below the A marking:
  – Add engine oil. (p. 111)
* When the engine oil level is above the B marking:
  – Correct the engine oil level.

19.2 Changing the engine oil and oil filter, cleaning the oil screens

**Warning**
**Danger of scalding** Engine and gear oil get very hot when the motorcycle is ridden.
– Wear suitable protective clothing and safety gloves.
– In the event of scalding, rinse the area affected immediately with lukewarm water.

**Note**
**Environmental hazard** Hazardous substances cause environmental damage.
– Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

**Info**
Drain the engine oil while the engine is at operating temperature.

**Preparatory work**
– Remove motor guard. (p. 73)
– Remove the engine guard retaining bracket. (p. 74)
– Stand the motorcycle on a level surface using the side stand.
Main work

– Place an appropriate container under the engine.
– Remove oil drain plug 1 with the O-ring.
– Remove oil screen 2 with the O-ring.
– Remove screw plug 3 with oil screen 4.
– Allow the engine oil to drain completely.
– Thoroughly clean the oil drain plugs and oil screens.
– Position oil screen 2 and mount and tighten oil drain plug 1 with the O-ring.

Guideline

<table>
<thead>
<tr>
<th>Part</th>
<th>Guideline</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oil drain plug</td>
<td>M24x1.5, 15 Nm (11.1 lbf ft)</td>
</tr>
<tr>
<td>Oil screen screw plug</td>
<td>M17x1.5, 12 Nm (8.9 lbf ft)</td>
</tr>
</tbody>
</table>

– Remove screws 5. Take off oil filter cover 6 with the O-ring.
– Pull oil filter 7 out of the oil filter housing.
– Allow the engine oil to drain completely.
– Thoroughly clean the parts and the sealing surface.

<table>
<thead>
<tr>
<th>Part</th>
<th>Guideline</th>
</tr>
</thead>
<tbody>
<tr>
<td>Screw, oil filter cover</td>
<td>M6, 10 Nm (7.4 lbf ft)</td>
</tr>
</tbody>
</table>

Info

Too little engine oil or poor-quality engine oil will result in premature wear of the engine.

– Insert new oil filter 7.

– Oil the O-ring of the oil filter cover. Mount oil filter cover 6.
– Mount and tighten the screws.

– Remove filler plug 8 with the O-ring, and fill up with engine oil.

<table>
<thead>
<tr>
<th>Engine oil</th>
<th>p. 126</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.7 l (1.8 qt.)</td>
<td>Engine oil (SAE 15W/50)</td>
</tr>
</tbody>
</table>

– Mount and tighten the filler plug together with the O-ring.
19.3 Adding engine oil

**Info**
Too little engine oil or poor-quality engine oil will result in premature wear of the engine.

**Main work**
- Remove filler plug 1 with the O-ring, and fill up with engine oil.

| Engine oil (SAE 15W/50) (p. 126) |

**Info**
In order to achieve optimal engine oil performance, it is not advisable to mix different engine oils. KTM recommends changing the engine oil.

- Mount and tighten the filler plug together with the O-ring.

**Danger**
**Danger of poisoning**  Exhaust gases are toxic and inhaling them may result in unconsciousness and death.
- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.

- Start the engine and check for leaks.

**Finishing work**
- Check the engine oil level. (p. 109)
20.1 Cleaning the motorcycle

**Note**

**Material damage** Components become damaged or destroyed if a pressure cleaner is used incorrectly.

The high pressure forces water into the electrical components, connectors, throttle cables, and bearings, etc. Pressure which is too high causes malfunctions and destroys components.

- Do not direct the water jet directly on to electrical components, connectors, throttle cables or bearings.
- Maintain a minimum distance between the nozzle of the pressure cleaner and the component.
  Minimum clearance 60 cm (23.6 in)

**Environmental hazard** Hazardous substances cause environmental damage.
- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

---

**Info**

Clean the motorcycle regularly to maintain its value and appearance over a long period.

Avoid direct sunshine when cleaning the motorcycle.

- Close off exhaust system to keep water from entering.
- Remove loose dirt first with a soft jet of water.
- Spray the heavily soiled parts with a normal commercial motorcycle cleaner and clean using a brush.

**Motorcycle cleaner (\(\text{p. 128}\)**

**Info**

Use warm water containing normal motorcycle cleaner and a soft sponge.

Never apply motorcycle cleaner to a dry motorcycle; always rinse the vehicle with water first.

Clean the motorcycle with cold water if it has been used on salted roads. Warm water enhances the corrosive effects of salt.

- After rinsing the motorcycle with a gentle spray of water, allow it to dry thoroughly.
- Remove the closure of the exhaust system.

**Warning**

**Danger of accidents** Moisture and dirt impair the brake system.

- Brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.

- After cleaning, ride the vehicle a short distance until the engine warms up.

**Info**

The heat produced causes water at inaccessible locations in the engine and on the brake system to evaporate.
– Push back the sleeves of the handlebar controls to allow any water that has penetrated to evaporate.
– After the motorcycle has cooled down, lubricate all moving parts and pivot points.
– Clean the chain. (p. 70)
– Treat bare metal (except for brake discs and the exhaust system) with a corrosion inhibitor.

Preserving materials for paints, metal and rubber (p. 128)
– Treat all painted parts with a mild paint care product.

Perfect finish and high gloss polish for paints (p. 128)

Info
Do not polish parts that were matte when delivered as this would strongly impair the material quality.
– Treat all plastic parts and powder-coated parts with a mild cleaning and care product.

Special cleaner for glossy and matte paint finishes, metal and plastic surfaces (p. 128)
– Lubricate the ignition and steering lock.

Universal oil spray (p. 128)

20.2 Checks and maintenance steps for winter operation

Info
If you use the motorcycle in winter, you must expect salt on the roads. You should therefore take precautions against aggressive road salt.
Clean the motorcycle with cold water if it has been used on salted roads. Warm water enhances the corrosive effects of salt.

– Clean the motorcycle. (p. 112)
– Clean the brakes.

Info
After EVERY trip on salted roads, thoroughly clean the motorcycle and, in particular, the brake calipers and brake linings, after they have cooled down and without removing them, with cold water and dry carefully.

– Treat the engine, the link fork, and all other bare or zinc-plated parts (except the brake discs) with a wax-based corrosion inhibitor.

Info
Corrosion inhibitor must not come in contact with the brake discs as this would greatly reduce the braking force.

– Clean the chain. (p. 70)
If you plan to garage the motorcycle for a longer period, perform the following steps or have them performed.

Before storing the motorcycle, check all parts for function and wear. If service, repairs, or replacements are necessary, you should do this during the storage period (less workshop overload). In this way, you can avoid long workshop waiting times at the start of the new season.

- When refueling for the last time before taking the motorcycle out of service, add fuel additive.
  
  Fuel additive (p. 128)

- Refuel. (p. 59)

- Clean the motorcycle. (p. 112)

- Change the engine oil and the oil filter, clean the oil screens. (p. 109)

- Check the antifreeze and coolant level. (p. 101)

- Check tire pressure. (p. 91)

- Remove the 12-V battery. (p. 92)

- Charge the 12-V battery. (p. 93)

Guideline

<table>
<thead>
<tr>
<th>Storage temperature of the 12-V battery without direct sunlight</th>
<th>0 … 35 °C (32 … 95 °F)</th>
</tr>
</thead>
</table>

- Store vehicle in a dry location that is not subject to large fluctuations in temperature.

Info

KTM recommends jacking up the motorcycle.

- Raise the motorcycle with the rear lifting gear. (p. 66)

- Lift the motorcycle with the front lifting gear. (p. 66)

- Cover the motorcycle with a tarp or cover that is permeable to air.

Info

Do not use non-porous materials since they prevent humidity from escaping, thus causing corrosion. Avoid running the engine for a short time only. Since the engine cannot warm up properly, the water vapor produced during combustion condenses and causes valves and the exhaust system to rust.
21.2 Preparing for use after storage

- Take the motorcycle off the front lifting gear. (p. 67)
- Remove the rear of the motorcycle from the lifting gear. (p. 66)
- Install the 12-V battery. (p. 92)
- Set the time and date. (p. 40)
- Perform checks and maintenance measures when preparing for use. (p. 52)
- Take a test ride.

*Loctite®243™*
24.1 Declarations of conformity

- **Info**
  The functional and equipment scope is model-dependent and may not include all wireless systems and application areas referred to.

**COBO SpA** hereby declares that the **BT-ROUTER** wireless system conforms with the relevant guidelines. The full text of the Declaration of Conformity is available at the following Internet address.
Certification website: [http://www.ktm.com/btrouter](http://www.ktm.com/btrouter)

**JNS Instruments Ltd.** hereby declares that the **210M1100** wireless system conforms with the relevant guidelines. The full text of the Declaration of Conformity is available at the following Internet address.
Certification website: [http://www.ktm.com/210m1100](http://www.ktm.com/210m1100)
Brake fluid DOT 4 / DOT 5.1

Standard/classification
- DOT

Guideline
- Use only brake fluid that complies with the specified standard (see specifications on the container) and that exhibits the corresponding properties.

Recommended supplier
Castrol
- REACT PERFORMANCE DOT 4

MOTOREX®
- Brake Fluid DOT 5.1

Coolant

Guideline
- Only use high-grade, silicate-free coolant with corrosion inhibitor additive for aluminum motors. Low grade and unsuitable antifreeze causes corrosion, deposits and frothing.
- Do not use pure water as only coolant is able to meet the requirements needed in terms of corrosion protection and lubrication properties.
- Only use coolant that complies with the requirements stated (see specifications on the container) and that has the relevant properties.

| Antifreeze protection to at least | −25 °C (−13 °F) |

The mixture ratio must be adjusted to the necessary antifreeze protection. Use distilled water if the coolant needs to be diluted.

The use of premixed coolant is recommended.

Observe the coolant manufacturer specifications for antifreeze protection, dilution and miscibility (compatibility) with other coolants.

Recommended supplier
MOTOREX®
- COOLANT M3.0

Engine oil (SAE 15W/50)

Standard/classification
- JASO T903 MA2 (p. 129)
- SAE (p. 129) (SAE 15W/50)

Guideline
- Use only engine oils that comply with the specified standards (see specifications on the container) and that exhibit the corresponding properties.

Partially synthetic engine oil

Recommended supplier
MOTOREX®
- Formula 4T
### Fork oil (SAE 4) (48601166S1)

**Standard/classification**
- SAE (p. 129) (SAE 4)

**Guideline**
- Use only oils that comply with the specified standards (see specifications on the container) and that exhibit
the corresponding properties.

### Shock absorber fluid (SAE 2.5) (50180751S1)

**Standard/classification**
- SAE (p. 129) (SAE 2.5)

**Guideline**
- Use only oils that comply with the specified standards (see specifications on the container) and that exhibit
the corresponding properties.

### Super unleaded (ROZ 95)

**Standard/classification**
- DIN EN 228 (ROZ 95)

**Guideline**
- Only use super unleaded fuel that matches or is equivalent to the specified standard.
- Fuel with an ethanol content of up to 10% (E10 fuel) is safe to use.

---

**Info**

Do not use fuel containing methanol (e.g., M15, M85, M100) or more than 10% ethanol (e.g., E15, E25, E85, E100).
### Chain cleaner
Recommended supplier
- MOTOREX®
  - Chain Clean

### Fuel additive
Recommended supplier
- MOTOREX®
  - Fuel Stabilizer

### Long-life grease(113,273),(275,280)
Recommended supplier
- MOTOREX®
  - Bike Grease 2000

### Motorcycle cleaner
Recommended supplier
- MOTOREX®
  - Moto Clean

### Perfect finish and high gloss polish for paints
Recommended supplier
- MOTOREX®
  - Moto Shine

### Preserving materials for paints, metal and rubber
Recommended supplier
- MOTOREX®
  - Moto Protect

### Special cleaner for glossy and matte paint finishes, metal and plastic surfaces
Recommended supplier
- MOTOREX®
  - Quick Cleaner

### Street chain spray
Guideline
Recommended supplier
- MOTOREX®
  - Chainlube Road Strong

### Universal oil spray
Recommended supplier
- MOTOREX®
  - Joker 440 Synthetic
JASO T903 MA2

Different technical development directions required a separate specification for motorcycles – the JASO T903 MA2 standard.

Earlier, engine oils from the automobile industry were used for motorcycles because there was no separate motorcycle specification.

Whereas long service intervals are demanded for automobile engines, the focus for motorcycle engines is on high performance at high engine speeds.

In most motorcycle engines, the transmission and clutch are lubricated with the same oil.

The JASO T903 MA2 standard meets these special requirements.

SAE

The SAE viscosity classes were defined by the Society of Automotive Engineers and are used for classifying oils according to their viscosity. The viscosity describes only one property of oil and says nothing about quality.

30.1 Red symbols

Red symbols indicate an error condition that requires immediate intervention.

- The oil pressure warning lamp lights up red – The oil pressure is too low. Stop immediately, taking care not to endanger yourself or other road users in the process, and switch off the engine.

30.2 Yellow and orange symbols

Yellow and orange symbols indicate an error condition that requires prompt intervention. Active driving aids are also represented by yellow or orange symbols.

- Malfunction indicator light lights up yellow – The OBD has detected a malfunction in the vehicle electronics. Come safely to a halt, and contact an authorized KTM workshop.
- The ABS warning lamp lights up yellow – Status or error messages relating to ABS.
- TC indicator lamp lights up yellow – MTC is not enabled or is currently intervening. The TC indicator lamp also lights up if a malfunction is detected. Contact an authorized KTM workshop. The TC indicator lamp flashes if MTC makes an active intervention.
- The general warning lamp lights up yellow – A note/warning note on operating safety has been detected. This is shown in addition.

30.3 Green and blue symbols

Green and blue symbols reflect information.

- The turn signal indicator lamp flashes green simultaneously with the turn signal – The turn signal is switched on.
- The idle indicator lamp lights up green – The transmission is in neutral.
- The high beam indicator light lights up blue – The high beam is switched on.
