1.1 Symbols used

The meaning of specific symbols is described below.

- ✓ Indicates an expected reaction (e.g. of a work step or a function).

- ❌ Indicates an unexpected reaction (e.g. of a work step or a function).

- 🔧 All work marked with this symbol requires specialist knowledge and technical understanding. In the interests of your own safety, have these jobs performed by an authorized Husqvarna Motorcycles workshop. There, your motorcycle will be optimally cared for by specially trained experts using the specialist tools required.

- 👾 Indicates a page reference (more information is provided on the specified page).

- 📚 Indicates information with more details or tips.

- ➡ Indicates the result of a testing step.
1 MEANS OF REPRESENTATION

Indicates a voltage measurement.

Indicates a current measurement.

Indicates the end of an activity, including potential rework.

1.2 Formats used

The typographical formats used in this document are explained below.

<table>
<thead>
<tr>
<th>Proprietary name</th>
<th>Indicates a proprietary name.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name®</td>
<td>Indicates a protected name.</td>
</tr>
<tr>
<td>Brand™</td>
<td>Indicates a brand available on the open market.</td>
</tr>
</tbody>
</table>

Underlined terms

Refer to technical details of the vehicle or indicate technical terms, which are explained in the glossary.
2.1 Use definition – intended use

This vehicle has been designed and built to withstand the normal stresses and strains of road use. This vehicle is not suitable for use on race tracks or offroad.

Info
This vehicle is only authorized for operation on public roads in its homologated version.

2.2 Misuse

The vehicle must only be used as intended. Dangers can arise for people, property and the environment through use not as intended. Any use of the vehicle beyond the intended and defined use constitutes misuse. Misuse also includes the use of operating and auxiliary fluids which do not meet the required specification for the respective use.

2.3 Safety advice

A number of safety instructions need to be followed to operate the product described safely. Therefore read this instruction and all further instructions included carefully. The safety instructions are highlighted in the text and are referred to at the relevant passages.
Info
Various information and warning labels are attached in prominent locations on the product described. Do not remove any information or warning labels. If they are missing, you or others may not recognize dangers and may therefore be injured.

2.4 Degrees of risk and symbols

Danger
Identifies a danger that will immediately and invariably lead to fatal or serious permanent injury if the appropriate measures are not taken.

Warning
Identifies a danger that is likely to lead to fatal or serious injury if the appropriate measures are not taken.

Caution
Identifies a danger that may lead to minor injuries if the appropriate measures are not taken.

Note
Identifies a danger that will lead to considerable machine and material damage if the appropriate measures are not taken.

Note
Indicates a danger that will lead to environmental damage if the appropriate measures are not taken.

2 SAFETY ADVICE

Information, emission control

Information, putting into operation
2.6 Reporting safety defects

If you believe that your vehicle has a defect which could cause an accident resulting in injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Husqvarna Motorcycles North America, Inc. If NHTSA receives multiple similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Husqvarna Motorcycles North America, Inc. You can contact NHTSA via the toll-free "Auto Safety Hotline" on 1–888–327–4236, visit the www.nhtsa.dot.gov website, or write to: NHTSA Headquarters, 1200 New Jersey Avenue, SE, West Building, Washington, DC 20590. You can also obtain other information about motor vehicle safety from the hotline.

2.7 Noise emission warranty

Husqvarna Motorcycles North America, Inc. guarantees that this exhaust system satisfies all U.S. EPA Federal noise emission standards applicable at the time of sale. This manufacturer warranty extends to the first person who buys this exhaust system for purposes other than resale, and to all subsequent buyers. Warranty claims should be directed to:
Husqvarna Motorcycles North America, Inc., c/o KTM North America, Inc., Customer Support, 1119 Milan Ave., Amherst, OH 44001, USA
Phone: (440) 985–3553
www.husqvarna-motorcycles.com
Husqvarna Motorcycles North America, Inc., c/o KTM Canada, Inc., 8701 Rue Samuel-Hatt, Chambly, QC J3L 6V4, Canada
Phone: (450) 441-4451
www.husqvarna-motorcycles.com
2.8 Operating noise warning

This product should be checked for necessary repair or replacement parts if the motorcycle noise has increased significantly through use. Otherwise, the owner may become subject to penalties under the applicable ordinances.

2.9 Manufacturer warranty for the exhaust monitoring system

Husqvarna Motorcycles North America, Inc. guarantees that, at the time of sale, the exhaust monitoring system complies with all the standards of the US Environmental Protection Agency (EPA) and the California Air Resources Board (CARB).

This manufacturer warranty applies in respect of the first owner of the motorcycle and all subsequent owners. Your exhaust monitoring system may include parts, such as the fuel injection system, ignition, catalytic converter, control units, hoses, connectors and other emission related assemblies, fuel tank, crankcase breather, fuel tank lid for vehicles with fuel evaporation monitoring, oil filler cap, pressure control valve, fuel/vapor separator, canister, ignition coils, ignition wire, capacitors, and spark plugs, if a fault occurs before the first scheduled replacement and includes the hoses, fittings, and pipes that are used directly in these components.

If the warranty conditions are met, Husqvarna Motorcycles will repair your motorcycle for you free of charge, including diagnosis, parts and labor.

As the owner of the motorcycle, you are responsible for the required maintenance specified in the Owner's Manual.

Please note that Husqvarna Motorcycles is entitled to reject warranty claims if your motorcycle or a part fails due to misuse, negligence, an accident, participation in racing or similar events, improper service work, or unauthorized modifications.
Scope of the manufacturer’s warranty
– Five (5) years or 30,000 kilometers (18,641 miles), whichever occurs first.

If you have any questions regarding the manufacturer warranty for the exhaust monitoring system, please address these to:
Husqvarna Motorcycles North America, Inc., c/o KTM North America, Inc., Customer Support, 1119 Milan Ave., Amherst, OH 44001, USA
Phone: (888) 985-6090
U.S. Environmental Protection Agency, 2000 Traverwood Drive, Ann Arbor, MI 48105, USA
California Air Resources Board, 1001 "I" Street, Sacramento, CA 95814, USA

2.10 Consumer rights

Warranty claims should be submitted to a Husqvarna Motorcycles workshop. If you are not satisfied, please contact:
Husqvarna Motorcycles North America, Inc., c/o KTM North America, Inc., Customer Support, 1119 Milan Ave., Amherst, OH 44001, USA
Phone: (440) 985–3553
www.husqvarna-motorcycles.com
Husqvarna Motorcycles North America, Inc., c/o KTM Canada, Inc., 8701 Rue Samuel-Hatt, Chambly, QC J3L 6V4, Canada
Phone: (450) 441-4451
www.husqvarna-motorcycles.com
Different rights may apply, according to national or regional legislation.
2.11 Tampering warning

Tampering with the noise control system is prohibited. Federal law prohibits the following acts or the causing thereof:

1. The removal or rendering inoperative by any person other than for purposes of servicing, repair, or replacement, of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its sale or delivery to the ultimate purchaser or while it is in use, or
2. the use of the vehicle after such device or element of design has been removed or rendered inoperative by any person.

Among those acts presumed to constitute tampering are the acts listed below:

1. Removal or puncturing of the main silencers, baffles, header pipes or any other components which conduct exhaust gases.
2. Removal or puncturing of parts of the intake system.
3. Lack of proper maintenance.
4. Replacing moving parts of the vehicle, or parts of the exhaust system or intake system, with parts other than those specified by the manufacturer.
2.12 Safe operation

**Danger**

**Danger of accidents** A rider who is not fit to ride poses a danger to him or herself and others.
- Do not operate the vehicle if you are not fit to ride due to alcohol, drugs or medication.
- Do not operate the vehicle if you are physically or mentally impaired.

**Danger**

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.
- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.

**Warning**

**Danger of burns** Some vehicle components become very hot when the vehicle is operated.
- Do not touch any parts such as the exhaust system, radiator, engine, shock absorber, or brake system before the vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

Only operate the vehicle when it is in perfect technical condition, in accordance with its intended use, and in a safe and environmentally compatible manner.
An appropriate driver’s license is needed to ride the vehicle on public roads.
Have malfunctions that impair safety promptly eliminated by an authorized Husqvarna Motorcycles workshop.
Adhere to the information and warning labels on the vehicle.
2.13 Protective clothing

Warning
Risk of injury  Missing or poor protective clothing presents an increased safety risk.

– Wear appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
– Always wear protective clothing that is in good condition and meets the legal regulations.

In the interest of your own safety, Husqvarna Motorcycles recommends that you only operate the vehicle while wearing protective clothing.

2.14 Work rules

Unless specified otherwise, the ignition must be turned off during all work (models with ignition lock, models with remote key) or the engine must be at a standstill (models without ignition lock or remote key). Special tools are necessary for certain tasks. The tools are not a component of the vehicle, but can be ordered using the number in parentheses. Example: bearing puller (15112017000)

During assembly, use new parts to replace parts which cannot be reused (e.g. self-locking screws and nuts, expansion screws, seals, sealing rings, O-rings, pins, and lock washers).
In the case of certain screws, a screw adhesive (e.g. Loctite®) is required. Observe the manufacturer’s instructions.
If thread locker (e.g., Precote®) has already been applied to a new part, do not apply any additional thread locker.
After disassembly, clean the parts that are to be reused and check them for damage and wear. Change damaged or worn parts.
After completing a repair or service work, check the operating safety of the vehicle.
2.15 Environment

If you use your motorcycle responsibly, you can ensure that problems and conflicts do not occur. To protect the future of the motorcycle sport, make sure that you use your motorcycle legally, display environmental consciousness, and respect the rights of others.
When disposing of used oil, other operating and auxiliary fluids, and used components, comply with the laws and regulations of the respective country.
Because motorcycles are not subject to the EU regulations governing the disposal of used vehicles, there are no legal regulations that pertain to the disposal of an end-of-life motorcycle. Your authorized Husqvarna Motorcycles dealer will be glad to advise you.

2.16 Owner's Manual

It is important that you read this Owner's Manual carefully and completely before making your first trip. The Owner's Manual contains useful information and many tips on how to operate, handle, and service your motorcycle. This is the only way to find out how best to customize the vehicle for your own use and how you can protect yourself from injury.

Info
Store the Owner's Manual on your terminal device, for example, so that you can read it whenever you need to.

If you would like to know more about the vehicle or have questions on the material you read, please contact an authorized Husqvarna Motorcycles dealer.
The Owner's Manual is an important component of the vehicle. If the vehicle is sold, the Owner's Manual must be downloaded again by the new owner.
The Owner's Manual can be downloaded several times using the QR code or the link on the delivery certificate.
The Owner's Manual is also available for download from your authorized Husqvarna Motorcycles dealer and on the Husqvarna Motorcycles website. A printed copy can also be ordered from your authorized Husqvarna Motorcycles dealer.

International Husqvarna Motorcycles website: www.husqvarna-motorcycles.com
3.1 Manufacturer warranty, implied warranty

The work prescribed in the service schedule must only be carried out in an authorized Husqvarna Motorcycles workshop and confirmed in the Husqvarna Motorcycles Dealer.net, as otherwise all warranty claims will be void. Damage or secondary damage caused by tampering with and/or conversions on the vehicle are not covered by the manufacturer warranty.

3.2 Fuel, auxiliary substances

**Note**

*Environmental hazard* Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

Use fuels and auxiliary substances in accordance with the Owner's Manual and specification.

3.3 Spare parts, accessories

For your own safety, only use spare parts and accessory products that are approved and/or recommended by Husqvarna Motorcycles and have them installed by an authorized Husqvarna Motorcycles workshop. Husqvarna Motorcycles accepts no liability for other products and any resulting damage or loss. Certain spare parts and accessory products are specified in parentheses in the descriptions. Your authorized Husqvarna Motorcycles dealer will be glad to advise you.

The current *Husqvarna Motorcycles Technische Zubehör* for your vehicle can be found on the Husqvarna Motorcycles website.

International Husqvarna Motorcycles website: www.husqvarna-motorcycles.com
3.4 Service

A prerequisite for perfect operation and prevention of premature wear is that the service, care, and tuning work on the engine and chassis is properly carried out as described in the Owner's Manual. An incorrect suspension setting can lead to damage and breakage of chassis components. Use of the vehicle under difficult conditions, such as dusty environments, heavy rain, high heat or with a heavy load, can lead to considerably more rapid wear of components such as the air filter, drive train, brake system, or suspension components. For this reason, it may be necessary to inspect or replace parts before the next scheduled service.

It is imperative that you adhere to the stipulated run-in times and service intervals. If you observe these exactly, you will ensure a much longer service life for your motorcycle. The relevant mileage or time interval is whichever occurs first.

3.5 Figures

The figures contained in the manual may depict special equipment. In the interest of clarity, some components may be shown disassembled or may not be shown at all. It is not always necessary to disassemble the component to perform the activity in question. Please follow the instructions in the text.

3.6 Customer service

Your authorized Husqvarna Motorcycles dealer will be happy to answer any questions you may have regarding your vehicle and Husqvarna Motorcycles.

A list of authorized Husqvarna Motorcycles dealers can be found on the Husqvarna Motorcycles website. International Husqvarna Motorcycles website: www.husqvarna-motorcycles.com
4.1 View of vehicle, front left (example)
1. Clutch lever (p. 38)
2. Fuel tank filler cap
3. Grab handles (p. 50)
4. Passenger foot pegs (p. 50)
5. Side stand (p. 52)
6. Shift lever (p. 51)
7. Seat release (p. 49)
4.2 View of vehicle, rear right (example)
1. Ignition and steering lock (p. 44)
2. Horn button (p. 39)
3. Turn signal switch (p. 40)
4. Light switch (p. 40)
5. Start button (p. 42)
6. Emergency OFF switch (p. 41)
7. Throttle grip (p. 39)
8. Hand brake lever (p. 38)
9. Level viewer, engine oil
10. Foot brake lever (p. 52)
5.1 Vehicle identification number

The vehicle identification number ⑴ is stamped on the right side of the steering head.
5.2 Type label

The USA type label ① is located on the right side of the frame. The type label Canada ② is located on the left side of the frame.
5.3 Key number

The key number 1 can be found on the KEYCODECARD.

**Info**
You need the key number to order a spare key. Keep the KEYCODECARD in a safe place.

5.4 Engine number

The engine number 1 is stamped on the left side of the engine under the engine sprocket.
5.5 Fork part number

The fork part number 1 is stamped on the inner side of the fork stub.

5.6 Shock absorber article number

The shock absorber article number 1 is on the left side of the shock absorber.
6 CONTROLS

6.1 Clutch lever

Clutch lever 1 is fitted on the handlebar on the left. The clutch is activated hydraulically and adjusts itself automatically.

6.2 Hand brake lever

The hand brake lever 1 is fitted on the right side of the handlebar. The hand brake lever operates the front brake.
6.3 Throttle grip

The throttle grip 1 is fitted on the right side of the handlebar.

6.4 Horn button

Horn button 1 is fitted on the left side of the handlebar.

Possible states
- The horn button ➯ is in the basic position
- The horn button ➯ is pressed – The horn is operated in this position.
6.5 Light switch

The light switch 1 is fitted on the left side of the handlebar.

**Possible states**

<table>
<thead>
<tr>
<th>State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low beam on</td>
<td>Light switch is turned downwards. In this position, the low beam and tail light are switched on.</td>
</tr>
<tr>
<td>High beam on</td>
<td>Light switch is turned upwards. In this position, the high beam and the tail light are switched on.</td>
</tr>
</tbody>
</table>

6.6 Turn signal switch

The turn signal switch 1 is fitted on the left side of the handlebar.

**Possible states**

<table>
<thead>
<tr>
<th>State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Turn signal off</td>
<td></td>
</tr>
<tr>
<td>Left turn signal on</td>
<td>Turn signal switch pressed to the left. The turn signal switch returns to the center position after activation.</td>
</tr>
<tr>
<td>Right turn signal on</td>
<td>Turn signal switch pressed to the right. The turn signal switch returns to the center position after activation.</td>
</tr>
</tbody>
</table>
To switch off the turn signal, press the turn signal switch towards the switch housing.

6.7 Emergency OFF switch

The emergency OFF switch 1 is fitted on the right side of the handlebar.

**Possible states**

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>✗</td>
<td>Emergency OFF switch off – In this position, the ignition circuit is interrupted, a running engine stops, and the engine cannot be started.</td>
</tr>
<tr>
<td>♂</td>
<td>Emergency OFF switch on – This position is necessary for operation as the ignition circuit is closed.</td>
</tr>
</tbody>
</table>
6.8 Start button

Start button 1 is fitted on the right side of the handlebar.

Possible states
- The start button 1 is in the basic position
- The start button 1 is pressed – In this position, the starter motor is actuated.

6.9 Combination switch

The combination switch is fitted on the left side of the handlebar.

Possible states

<table>
<thead>
<tr>
<th></th>
<th>STREET – Drive mode STREET and traction control are activated when LED 1 lights up.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>STREET without TC – When LEDs 1 and TC light up, drive mode STREET is active and traction control is deactivated.</td>
</tr>
<tr>
<td>1TC</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>SPORT – Drive mode SPORT and traction control are activated when LED 2 lights up.</td>
</tr>
</tbody>
</table>
The combination switch displays the current drive mode and traction control setting. The drive mode is changed using button MAP on the combination switch. The traction control is activated or deactivated using button TC on the combination switch.

**Info**
Each time the ignition is switched on, all three switch LEDs light up for a function check. If all three LEDs light up during operation, an error has been detected by the engine control unit. Contact an authorized Husqvarna Motorcycles workshop immediately.
6.10 Ignition and steering lock

The ignition and steering lock is located in front of the seat.

Possible states

<table>
<thead>
<tr>
<th>State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ignition off OFF</td>
<td>In this position, the ignition circuit is interrupted, a running engine stops, and a non-running engine will not start. The ignition key can be removed.</td>
</tr>
<tr>
<td>Ignition on ON</td>
<td>In this position, the ignition circuit is closed and the engine can be started.</td>
</tr>
<tr>
<td>Steering locked</td>
<td>In this position, the ignition circuit is interrupted and the steering locked. The ignition key can be removed.</td>
</tr>
</tbody>
</table>
6.11 ABS button

The ABS button 1 is fitted next to the combination instrument on the left.

<table>
<thead>
<tr>
<th>Info</th>
</tr>
</thead>
<tbody>
<tr>
<td>The ABS button is also used as the ABS warning lamp (p. 139).</td>
</tr>
</tbody>
</table>

6.12 Overview of indicator lamps

<tr>
<td>The oil pressure is too low. Stop immediately, taking care not to endanger yourself or other road users in the process, and switch off the engine.</td>
</tr>
</tbody>
</table>
6.13 Opening fuel tank filler cap

**Danger**

**Fire hazard**  Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not fuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

**Warning**

**Danger of poisoning**  Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

Note

Environmental hazard  Improper handling of fuel is a danger to the environment.
– Do not allow fuel to enter the groundwater, the soil, or the sewage system.

– Lift cover 1 of fuel tank filler cap and insert the ignition key.
– Turn the ignition key 90° counterclockwise and take off the fuel tank filler cap.

Info
The fuel tank filler cap has a fuel tank breather.
6.14 Closing the fuel tank filler cap

- Put the fuel tank filler cap back on and turn the ignition key 90° clockwise.
- Remove the ignition key and fold down the cover.

6.15 Seat release

The loop 1 unlocks the seat.
6.16 Grab handles

The grab handles 1 are used for moving the motorcycle around. If you carry a passenger, the passenger can hold onto the grab handles during the trip.

6.17 Passenger foot pegs

The passenger foot pegs can be folded up and down.

Possible states
- Passenger foot pegs folded up – For operation without a passenger.
- Passenger foot pegs folded down – For operation with a passenger.
6.18 Shift lever

The shift lever 1 is mounted on the left side of the engine.

The gear positions can be seen in the photograph. The neutral or idle position is between the first and second gears.
6.19 Foot brake lever

Foot brake lever 1 is located in front of the right footrest. The rear brake is engaged with the foot brake lever.

6.20 Side stand

Side stand 1 is located on the left of the vehicle. The side stand is used for parking the motorcycle.

Info
The side stand must be folded up during motorcycle use. The side stand is coupled with the safety starting system – see the riding instructions.

Possible states
- Side stand folded out – The vehicle can be supported on the side stand. The safety starting system is active.
• Side stand folded in – This position is mandatory when riding the motorcycle. The safety starting system is inactive.
7.1 Overview

Overview of indicator lamps (p. 45)

1. Left button
2. Display
3. Right button

7.2 Activation

Activating combination instrument
The combination instrument is activated when one of the buttons is pressed or an impulse comes from the wheel speed sensor.
7.3 Messages on the combination instrument

Possible states

- Battery voltage of the combination instrument – The battery voltage of the combination instrument is too low. Change the combination instrument battery.

401901-01

7.4 Setting the combination instrument

Condition
The motorcycle is stationary.
Press and hold both buttons for 3 - 5 seconds.

The Setup menu is displayed. The **UNIT** display flashes.

Press one of the buttons to select **UNIT** for the speed in kilometers **KM/H** or miles **M/H**.

Wait for 5 seconds.

The combination instrument changes to the next menu item. The ☀️ symbol flashes.

Press one of the buttons to select the 24h display or 12h display for the clock.
− Wait for 5 seconds.
  ✔ The combination instrument changes to the next menu item. The ⊗ symbol flashes.

**Resetting the time**
− Press the left button.
  ✔ The value decreases.

**Advancing the time**
− Press the right button.
  ✔ The value increases.

− Wait for 5 seconds.
  ✔ The combination instrument changes to the next menu item. The ← symbol flashes.

− Set the service.

  **Guideline**
  
  | Service display deactivated |

**Shortening the service interval**
− Press the left button.
  ✔ The value decreases.

**Extending the service interval**
− Press the right button.
  ✔ The value increases.
7.5 Adjusting the kilometers or miles

Info
If the unit is changed, the value ODO is retained and converted accordingly.

Condition
The motorcycle is stationary.
7.6 Setting the clock

**Condition**
The motorcycle is stationary.

- Press and hold both buttons for 3 - 5 seconds.
  - The Setup menu is displayed. The **UNIT** display flashes.
- Press one of the buttons to select **UNIT** for the speed in kilometers **KM/H** or miles **M/H**.

- Wait for the menu of the clock ☀ to flash.
- Press one of the buttons to select the 24 h display or 12 h display for the clock.
Resetting the time
- Press the left button.
  ✓ The value decreases.

Advancing the time
- Press the right button.
  ✓ The value increases.

7.7 Setting the service display

Condition
The motorcycle is stationary.

- Press and hold both buttons for 3 - 5 seconds.
  ✓ The Setup menu is displayed. The UNIT display flashes.
- Wait for the menu of the service display to flash.
- Set the service.

Guideline
Service display switched off

Shortening the service interval
- Press the left button.
  ✓ The value decreases.
Extending the service interval
- Press the right button.
  ✔ The value increases.

Switching off the service interval display
- Press and hold the left button.
  ✔ off appears on the display.

7.8 Speed, time, and DST distance 1

- Press one of the buttons until DST appears on the combination instrument.

KM/H or M/H shows the speed.
🕰 shows the time.
DST shows the distance since the last reset, such as between two refueling stops.
**Info**

If the value of 39999.9 is exceeded, **DST** is automatically reset to 0.0.

<table>
<thead>
<tr>
<th>Action</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>Press the left button briefly.</td>
<td>Next display mode</td>
</tr>
<tr>
<td>Press the left button for 3 – 5 seconds.</td>
<td><strong>DST</strong> can be preset to a value between 0.0 and 39999.9 by pressing the buttons.</td>
</tr>

</table>
8.1 Advice on preparing for first use

**Danger**

*Danger of accidents*  A rider who is not fit to ride poses a danger to him or herself and others.
- Do not operate the vehicle if you are not fit to ride due to alcohol, drugs or medication.
- Do not operate the vehicle if you are physically or mentally impaired.

**Warning**

*Risk of injury*  Missing or poor protective clothing presents an increased safety risk.
- Wear appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
- Always wear protective clothing that is in good condition and meets the legal regulations.

**Warning**

*Danger of crashing*  Different tire tread patterns on the front and rear wheel impair the handling characteristic.
Different tire tread patterns can make the vehicle significantly more difficult to control.
- Make sure that only tires with a similar tire tread pattern are fitted to the front and rear wheel.

**Warning**

*Danger of accidents*  Non-approved or non-recommended tires and wheels impact the handling characteristic.
- Only use tires/wheels approved by Husqvarna Motorcycles with the corresponding speed index.
Warning

Danger of accidents  New tires have reduced road grip.
The contact surface on new tires is not yet roughened.
– Run in new tires with moderate riding at alternating angles.
  Running-in phase 200 km (124 mi)

Warning

Danger of accidents  The brake system fails in the event of overheating.
If the foot brake lever is not released, the brake linings drag continuously.
– Take your foot off the foot brake lever if you do not want to brake.

Info

When using your vehicle, remember that others may feel disturbed by excessive noise.

– Make sure that the pre-sale inspection work has been carried out by an authorized Husqvarna Motorcycles workshop.
  ✔️ You will receive a delivery certificate when the vehicle is handed over.
– Before riding for the first time, read the entire Owner's Manual carefully.
– Get to know the controls.
– Adjust the basic position of the clutch lever. (◮ p. 135)
– Adjust the basic position of the hand brake lever. (◮ p. 141)
– Adjust the basic position of the foot brake lever. ⚒ (◮ p. 149)
– Get used to handling the motorcycle in a suitable area before making a longer trip. Try also to ride as slowly as possible and in a standing position to get a better feel for the motorcycle.
– Hold the handlebar firmly with both hands and keep your feet on the footrests when riding.
– Do not make any trips that exceed your ability and experience.
– Run the engine in. (p. 67)

8.2 Running in the engine
– During the run-in phase, do not exceed the specified vehicle speed in the respective gear.

<table>
<thead>
<tr>
<th>Guideline</th>
<th>During the first 1,000 km (620 mi)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum speed per gear</td>
<td></td>
</tr>
<tr>
<td>first-gear</td>
<td>50 km/h (31.1 mph)</td>
</tr>
<tr>
<td>second-gear</td>
<td>70 km/h (43.5 mph)</td>
</tr>
<tr>
<td>third-gear</td>
<td>90 km/h (55.9 mph)</td>
</tr>
<tr>
<td>fourth-gear</td>
<td>110 km/h (68.4 mph)</td>
</tr>
<tr>
<td>fifth-gear</td>
<td>125 km/h (77.7 mph)</td>
</tr>
<tr>
<td>sixth-gear</td>
<td>140 km/h (87 mph)</td>
</tr>
</tbody>
</table>

– Avoid fully opening the throttle.
8.3 Loading the vehicle

**Warning**

**Danger of accidents**  Total weight and axle loads influence the handling characteristic. The total weight consists of: motorcycle ready for operation and with a full tank, driver and passenger with protective clothing and helmet, and luggage.

- Do not exceed the maximum permissible overall weight or the axle loads.

**Warning**

**Danger of accidents**  Improper mounting of cases or the tank rucksack impairs the handling characteristic.

- Mount and secure cases and tank rucksack according to the manufacturer's instructions.

**Warning**

**Danger of accidents**  Carrying luggage alters handling characteristics at high speed.

- Adapt your speed to your payload.
- Ride more slowly if your motorcycle is loaded with cases or other luggage.

  Maximum speed with baggage  130 km/h (80.8 mph)

**Warning**

**Danger of accidents**  The luggage system will be damaged if it is overloaded.

- Read the manufacturer information on maximum payload when mounting cases.
Warning  
Danger of accidents  Luggage which has slipped impairs visibility.
If the tail light is covered, you are less visible to traffic behind you, especially when it is dark.
– Check that your luggage is fixed properly at regular intervals.

Warning  
Danger of accidents  A high payload alters the handling characteristic and increases the stopping distance.
– Adapt your speed to your payload.

Warning  
Danger of accidents  Pieces of luggage which have slipped impair the handling characteristic.
– Check that your luggage is fixed properly at regular intervals.

Warning  
Fire hazard  The hot exhaust system may burn luggage.
– Fasten your luggage in such a way that it cannot be burned or singed by the hot exhaust system.

– If you carry luggage, make sure you secure it firmly as close as possible to the center of the vehicle and ensure even weight distribution between the front and rear wheels.
– Do not exceed the maximum permissible weight and the maximum permissible axle loads.
### Guideline

<table>
<thead>
<tr>
<th>Description</th>
<th>Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum permissible overall weight</td>
<td>350 kg (772 lb.)</td>
</tr>
<tr>
<td>Maximum permissible front axle load</td>
<td>150 kg (331 lb.)</td>
</tr>
<tr>
<td>Maximum permissible rear axle load</td>
<td>200 kg (441 lb.)</td>
</tr>
</tbody>
</table>
9.1 Checks and maintenance measures when preparing for use

Info
Before every trip, check the condition of the vehicle and ensure that it is roadworthy. The vehicle must be in perfect technical condition when it is being operated.

- Check the engine oil level. (p. 223)
- Check the front brake fluid level. (p. 143)
- Check the rear brake fluid level. (p. 151)
- Check the front brake linings. (p. 147)
- Check the rear brake linings. (p. 154)
- Check that the brake system is functioning properly.
- Check the coolant level. (p. 207)
- Check the chain for dirt. (p. 122)
- Check the chain tension. (p. 125)
- Check the tire condition. (p. 169)
- Check tire pressure. (p. 173)
- Check the settings of all controls and ensure that they can be operated smoothly.
- Check that the electrical system is functioning properly.
- Check that luggage is properly secured.
- Sit on the motorcycle and check the rear mirror setting.
- Check the fuel level.
9.2 Starting the vehicle

**Danger**

**Danger of poisoning**  Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.

**Caution**

**Danger of accidents**  Electronic components and safety devices will be damaged if the 12-V battery is discharged or missing.

If the 12-V battery is discharged or defective, malfunctions in the vehicle electronics can occur, especially when starting.

- Never operate the vehicle with a discharged 12-V battery or without a 12-V battery.

**Note**

**Engine damage**  High revving speed with a cold engine negatively impacts the lifespan of the engine.

- Always run the engine warm at a low speed.
– Turn the emergency OFF switch to the position ⬤.
– Switch on the ignition by turning the ignition key to the ON ⬤ position.

✔ After you switch on the ignition, you can hear the fuel pump working for about two seconds. The function check of the combination instrument is run at the same time.

✔ The ABS warning lamp lights up and goes back out after starting off.

– Shift the transmission to neutral position.

✔ Green idle indicator lamp N lights up.
– Press start button ①.

**Info**

Do not press the start button until the combination instrument function check has finished. Do not open the throttle to start. Press the starter for a maximum of 5 seconds. Wait for at least 5 seconds before trying again. This motorcycle is equipped with a safety starting system. You can only start the engine if the transmission is in neutral or if the clutch lever is pulled when a gear is engaged. If the side stand is folded out and you shift into gear and release the clutch lever, the engine stops.
– Take the weight off the side stand and swing it back up with your foot as far as it will go.

**Switching off the ABS**

Husqvarna Motorcycles recommends riding with ABS at all times. However, situations may arise in which ABS is not advantageous.

**Condition**

The motorcycle is stationary.

Vehicle speed before stopping: \( \geq 5 \text{ km/h} \) (\( \geq 3.1 \text{ mph} \))

– Press and hold the button 1 for 3 – 5 seconds.

✔ The ABS warning lamp lights up; the ABS is deactivated.

### 9.3 Starting off

– Pull the clutch lever, engage 1st gear, release the clutch lever slowly and simultaneously open the throttle carefully.
### 9.4 Shifting, riding

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
</table>
| **Danger of accidents** Abrupt load alterations can cause the vehicle to get out of control.  
  - Avoid abrupt load alterations and sudden braking actions.  
  - Adapt your speed to the road conditions. |

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
</table>
| **Danger of accidents** If you change down at high engine speed, the rear wheel blocks and the engine races.  
  - Do not change into a low gear at high engine speed. |

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
</table>
| **Danger of accidents** An incorrect ignition key position causes malfunctions.  
  - Do not change the ignition key position while driving. |

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
</table>
| **Danger of accidents** Adjustments to the vehicle distract attention from traffic activity.  
  - Make all adjustments when the vehicle is at a standstill. |
Warning
Risk of injury  The passenger may fall from the motorcycle if they conduct themselves incorrectly.
–  Ensure that the passenger sits correctly on the passenger seat, places his or her feet on the pas-
senger foot pegs and holds on to the rider or the grab handles.
–  Note the regulations governing the minimum age of passengers in your country.

Warning
Danger of accidents  A risky riding style constitutes a major risk.
–  Comply with traffic regulations and ride defensively and with foresight to detect sources of danger
   as early as possible.

Warning
Danger of accidents  Cold tires have reduced road grip.
–  Ride the first miles carefully on every journey at moderate speed until the tires reach operating tem-
   perature.

Warning
Danger of accidents  New tires have reduced road grip.
The contact surface on new tires is not yet roughened.
–  Run in new tires with moderate riding at alternating angles.
  Running-in phase  200 km (124 mi)
Warning
Danger of accidents Total weight and axle loads influence the handling characteristic.
The total weight consists of: motorcycle ready for operation and with a full tank, driver and passenger with protective clothing and helmet, and luggage.
- Do not exceed the maximum permissible overall weight or the axle loads.

Warning
Danger of accidents Pieces of luggage which have slipped impair the handling characteristic.
- Check that your luggage is fixed properly at regular intervals.

Warning
Danger of accidents A fall can damage the vehicle more seriously than it may first appear.
- Check the vehicle after a fall as you do when preparing for use.

Note
Engine damage Unfiltered intake air has a negative effect on the service life of the engine.
Dust and dirt will enter the engine without an air filter.
- Only operate the vehicle if it is equipped with an air filter.
Note

**Engine failure** Overheating damages the engine.

- If the coolant temperature warning is displayed, stop immediately and take care not to endanger yourself or other traffic participants in the process.
- Allow the engine and cooling system to cool down.
- Check and, if necessary, correct the coolant level on the cooling system while it is in a cooled state.

---

**Info**

If unusual noises occur during operation, stop immediately, switch off the engine, park the vehicle properly, and contact an authorized Husqvarna Motorcycles workshop.

---

- Shift into a higher gear when conditions allow (incline, road situation, etc.).
- Release the throttle while simultaneously pulling the clutch lever, shift into the next gear, release the clutch lever, and open the throttle.

---

**Info**

You can see the positions of the 6 forward gears in the figure. The neutral or idle position is between the first and second gears. First gear is used for starting off or for steep inclines.

---

- After reaching maximum speed by fully opening the throttle grip, turn the throttle back so it is ¾ open. This will barely
reduce the speed, but fuel consumption will be considerably lower.

– Accelerate only up to a speed suitable for the road surface and weather conditions. Particularly in bends, do not shift, and accelerate very carefully.

– Brake if necessary and close the throttle at the same time in order to shift down.

– Pull clutch lever and shift into a lower gear, release the clutch lever slowly, and open the throttle or shift again.

– If the engine stalls (e.g. at an intersection), just pull the clutch lever and press the start button. The transmission must not be shifted into neutral.

– Switch off the engine if you are likely to be running at idle speed or stationary for a long time.

– Avoid frequent and lengthy slipping of the clutch. This causes the engine oil, engine and cooling system to heat up.

– Ride at a low engine speed instead of at a high engine speed with a slipping clutch.

– If the malfunction indicator lamp lights up during a trip, please contact an authorized Husqvarna Motorcycles workshop as soon as possible.

– Easy Shift allows you to shift up in the speed range shown without pulling the clutch lever.
Guideline

<table>
<thead>
<tr>
<th>Minimum speed before gear change</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>First gear to second gear</td>
<td>30 km/h (18.6 mph)</td>
</tr>
<tr>
<td>Second gear to third gear</td>
<td>40 km/h (24.9 mph)</td>

</tbody>
</table>
9.5 Braking

**Warning**

**Danger of accidents** Moisture and dirt impair the brake system.
- Brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.

**Warning**

**Danger of accidents** A spongy pressure point on the front or rear brake reduces braking efficiency.
- Check the brake system and do not continue riding until the problem is eliminated. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)

**Warning**

**Danger of accidents** The brake system fails in the event of overheating.
- If the foot brake lever is not released, the brake linings drag continuously.
- Take your foot off the foot brake lever if you do not want to brake.

**Warning**

**Danger of accidents** Higher total weight increases the stopping distance.
- Take the longer stopping distance into account when carrying a passenger or luggage with you.

**Warning**

**Danger of accidents** Salt on the roads impairs the brake system.
- Brake carefully several times to remove salt from the brake linings and the brake discs.
Warning
Danger of accidents  ABS may increase the stopping distance in certain situations.
–  Adjust application of the brakes to the respective riding situation and riding surface conditions.

Warning
Danger of accidents  Excessively forceful application of the brakes blocks the wheels.
The ABS effectiveness is only ensured if it is switched on.
–  Leave the ABS switched on in order to benefit from the protective effect.

Warning
Danger of accidents  The rear wheel can lock due to the engine braking effect.
–  Pull in the clutch, if you perform emergency or full braking, or if you brake on a slippery ground.
–  To brake release the throttle and apply the front and rear brakes at the same time.

Info
When the ABS is enabled, you can achieve maximum braking power even on low grip surfaces such as sandy, wet, or slippery terrain without the danger of the wheels locking.

Warning
Danger of accidents  Banked or laterally sloping ground reduces the maximum possible delay.
–  If possible finish braking before going into a bend.
– Always finish braking before you go into a bend. Change down to a lower gear appropriate to your road speed.
– Use the braking effect of the engine on long downhill stretches. Change down one or two gears, but do not over-rev the engine. You will have to apply the brakes far less frequently as a result and the brake system will not overheat.

### 9.6 Stopping, parking

#### Warning
**Risk of injury**  People who act without authorization endanger themselves and others.
– Do not leave the vehicle unattended if the engine is running.
– Protect the vehicle against access by unauthorized persons.
– Lock the steering and remove the ignition key if you leave the vehicle unattended.

#### Warning
**Danger of burns**  Some vehicle components become very hot when the vehicle is operated.
– Do not touch any parts such as the exhaust system, radiator, engine, shock absorber, or brake system before the vehicle parts have cooled down.
– Let the vehicle parts cool down before you perform any work on the vehicle.

#### Note
**Material damage**  The vehicle may be damaged by incorrect procedure when parking.
Significant damage may be caused if the vehicle rolls away or falls over. The components for parking the vehicle are designed only for the weight of the vehicle.

- Park the vehicle on a firm and level surface.
- Ensure that nobody sits on the vehicle when the vehicle is parked on a stand.

**Note**

**Fire hazard**  Hot vehicle components pose a fire hazard and explosion risk.

- Do not park the vehicle near to materials which are highly flammable or explosive.
- Allow the vehicle to cool down before covering it.

- Apply the brakes on the motorcycle.
- Shift the transmission to neutral position.
- Switch off the ignition by turning the ignition key to the **OFF** position.

**Info**

If the engine is switched off with the emergency OFF switch and the ignition remains switched on at the ignition lock, power continues to flow to most power consumers. This discharges the 12-V battery. You should therefore always switch off the engine with the ignition lock – the emergency OFF switch is intended for emergencies only.

- Park the motorcycle on a firm surface.
- Swing side stand forward with your foot as far as it will go and lean the vehicle on it.
- Lock the steering by turning the handlebar fully to the left, pressing down the ignition key to the position and turning it to the position . To make the steering lock engage more easily, move the handlebar a little to the left and right. Remove the ignition key.
9.7 Transport

Note

Danger of damage  The parked vehicle can roll away or fall over.
– Park the vehicle on a firm and level surface.

Note

Fire hazard  Hot vehicle components pose a fire hazard and explosion risk.
– Do not park the vehicle near to materials which are highly flammable or explosive.
– Allow the vehicle to cool down before covering it.

– Switch off the engine and remove the ignition key.
– Use tension belts or other suitable devices to secure the motorcycle against accidents or falling over.
9.8 Refueling

**Danger**  
**Fire hazard**  Fuel is highly flammable.  
The fuel in the fuel tank expands when warm and can escape if overfilled.  
- Do not fuel the vehicle in the vicinity of open flames or lit cigarettes.  
- Switch off the engine for refueling.  
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.  
- If any fuel is spilled, wipe it off immediately.  
- Observe the specifications for refueling.

**Warning**  
**Danger of poisoning**  Fuel is poisonous and a health hazard.  
- Avoid skin, eye and clothing contact with fuel.  
- Immediately consult a doctor if you swallow fuel.  
- Do not inhale fuel vapors.  
- In case of skin contact, rinse the affected area with plenty of water.  
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.  
- Change your clothing in case of fuel spills on them.

**Note**  
**Material damage**  Inadequate fuel quality causes the fuel filter to quickly become clogged.
In some countries and regions, the available fuel quality and cleanliness may not be sufficient. This will result in problems with the fuel system.

- Refuel only with clean fuel that meets the specified standards. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)

**Note**

**Environmental hazard**  Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.
– Switch off the engine.
– Open fuel tank filler cap. (☞ p. 47)
– Fill the fuel tank with fuel up to level A.

Guideline

<table>
<thead>
<tr>
<th>Level A</th>
<th>20 mm (0.79 in)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fuel tank capacity, approx.</td>
<td>12.4 l (3.28 US gal)</td>

- ○ One-time interval
- ● Periodic interval
11.1 Fork/shock absorber

The fork and the shock absorber offer many options for adapting the chassis to the riding style and the payload.

**Info**

The recommendations for the suspension setting are shown in table 1. The table is located on the underside of the front rider’s seat.

These adjustments should be understood as a guideline and should always be the basis for one’s own personal suspension setting. Do not change the adjustments at random, as otherwise the riding characteristics could deteriorate, particularly at high speeds.

11.2 Adjusting the compression damping of the fork

**Info**

The hydraulic compression damping determines the fork suspension behavior.
- Turn white adjusting screw 1 clockwise as far as it will go.

**Info**

Adjusting screw 1 is located at the upper end of the left fork leg. The compression damping is located in left fork leg **COMP** (white adjusting screw). The rebound damping is located in right fork leg **REB** (red adjusting screw).

- Turn counterclockwise by the number of clicks corresponding to the fork type.

**Guideline**

<table>
<thead>
<tr>
<th>Compression damping</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Comfort</td>
<td>20 clicks</td>
</tr>
<tr>
<td>Standard</td>
<td>15 clicks</td>
</tr>
<tr>
<td>Sport</td>
<td>10 clicks</td>
</tr>
<tr>
<td>Full payload</td>
<td>10 clicks</td>
</tr>
</tbody>
</table>

**Info**

Turn clockwise to increase damping; turn counterclockwise to reduce damping.
11.3 Adjusting the rebound damping of the fork

Info
The hydraulic rebound damping determines the fork suspension behavior.

- Turn red adjusting screw 1 clockwise as far as it will go.

Info
Adjusting screw 1 is located at the upper end of the right fork leg. The rebound damping is located in right fork leg REB (red adjusting screw). The compression damping is located in left fork leg COMP (white adjusting screw).

- Turn counterclockwise by the number of clicks corresponding to the fork type.

Guideline

<table>
<thead>
<tr>
<th>Rebound damping</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Comfort</td>
<td>20 clicks</td>
</tr>
<tr>
<td>Standard</td>
<td>15 clicks</td>
</tr>
<tr>
<td>Sport</td>
<td>10 clicks</td>
</tr>
<tr>
<td>Full payload</td>
<td>10 clicks</td>
</tr>
</tbody>
</table>
11.4 Compression damping of the shock absorber

The compression damping of the shock absorber is divided into two ranges: high-speed and low-speed. High-speed and low-speed refer to the compression speed of the rear wheel suspension and not to the vehicle speed.

The high-speed compression adjuster, for example, has an effect when riding over an asphalt edge: the rear wheel suspension compresses quickly.

The low-speed compression adjuster has an effect, for example, when riding over long ground swells: the rear wheel suspension compresses slowly.

These two ranges can be adjusted separately, although the transition between high-speed and low-speed is gradual. Thus, modifications in the high-speed range affect the compression damping in the low-speed range and vice versa.
11.5 Adjusting the low-speed compression damping of the shock absorber

**Caution**

**Risk of injury**
Parts of the shock absorber will move around if the shock absorber is detached incorrectly.

The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)

**Info**

The low-speed compression adjuster takes effect during slow to normal compression of the shock absorber.

- Turn adjusting screw 1 clockwise with a screwdriver as far as the last perceptible click.

**Info**

Do not loosen fitting 2!

- Turn counterclockwise by the number of clicks corresponding to the shock absorber type.
11.6 Adjusting the high-speed compression damping of the shock absorber

**Caution**

**Risk of injury**  Parts of the shock absorber will move around if the shock absorber is detached incorrectly.

The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)

---

**Guideline**

<table>
<thead>
<tr>
<th>Low-speed compression damping</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Comfort</td>
<td>20 clicks</td>
</tr>
<tr>
<td>Standard</td>
<td>15 clicks</td>
</tr>
<tr>
<td>Sport</td>
<td>10 clicks</td>
</tr>
<tr>
<td>Full payload</td>
<td>10 clicks</td>
</tr>
</tbody>
</table>

**Info**

Turn clockwise to increase damping; turn counterclockwise to reduce damping.
Info
The high-speed compression adjuster takes effect during fast compression of the shock absorber.

- Turn adjusting screw 1 all the way clockwise with a socket wrench.

Info
Do not loosen fitting 2!

- Turn counterclockwise by the number of turns corresponding to the shock absorber type.

Guideline

<table>
<thead>
<tr>
<th>High-speed compression damping</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comfort</td>
</tr>
<tr>
<td>Standard</td>
</tr>
<tr>
<td>Sport</td>
</tr>
<tr>
<td>Full payload</td>
</tr>
</tbody>
</table>

Info
Turn clockwise to increase damping; turn counterclockwise to reduce damping.
11.7 Adjusting the rebound damping of the shock absorber

**Caution**

_Risk of injury_ Parts of the shock absorber will move around if the shock absorber is detached incorrectly.

The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)

- Turn adjusting screw 1 clockwise up to the last perceptible click.

- Turn counterclockwise by the number of clicks corresponding to the shock absorber type.

**Guideline**

<table>

</tr>
</tbody>
</table>
11.8 Handlebar position

The holes on the handlebar support are placed at a distance of \( A \) from the center.

| Hole distance \( A \) | 3.5 mm (0.138 in) |

The handlebar can be mounted in 2 different positions. This allows the handlebar to be mounted in the most comfortable position for the rider.

Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.
11.9 Adjusting the handlebar position

**Warning**

**Danger of accidents**  A repaired handlebar poses a safety risk.

If the handlebar is bent or straightened, the material becomes fatigued. The handlebar may break as a result.

- Change the handlebar if the handlebar is damaged or bent.
- Remove screws 1. Take off the handlebar clamp. Remove the handlebar and lay it to one side.

**Info**
Cover the components to protect them against damage.
Do not kink the cables and lines.

- Remove screws 2. Remove handlebar support 3.
- Position rubber bushings 4 and push through nuts 5 from below.
- Place the handlebar support in the required position.

**Info**
The handlebar supports are longer and higher on one side.
Position the left and right handlebar supports evenly.

- Mount and tighten screws 2.

**Guideline**

<table>
<thead>
<tr>
<th>Screw, handlebar support</th>
<th>M10</th>
<th>45 Nm (33.2 lbf ft)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Loctite®243™</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Position the handlebar.

**Info**
Make sure the cables and wiring are positioned correctly.

Position the handlebar clamp.
- Mount screws 1 but do not tighten yet.
  - Handlebar clamp marking A is aligned with center line A of the handlebar scale.
- First bolt the handlebar clamp with screws 1 onto the longer, higher side of the handlebar supports so that both parts touch.
- Tighten screws 1 evenly.

<table>
<thead>
<tr>
<th>Guideline</th>

</thead>
<tbody>
<tr>
<td><strong>Screw, handlebar clamp</strong></td>
</tr>
</tbody>
</table>
12.1 Raising the motorcycle with a lift stand

**Note**

**Danger of damage**  The parked vehicle can roll away or fall over.
- Park the vehicle on a firm and level surface.

- Raise the motorcycle in the area of the footrest bracket.
  - ✔️ Neither wheel is in contact with the ground.
- Secure the motorcycle against falling over.

12.2 Removing the motorcycle from the lift stand

**Note**

**Danger of damage**  The parked vehicle can roll away or fall over.
- Park the vehicle on a firm and level surface.
12 SERVICE WORK ON THE CHASSIS

12.3 Raising the motorcycle with the rear lifting gear

Note

Danger of damage The parked vehicle can roll away or fall over.

- Park the vehicle on a firm and level surface.
– Insert the adapter in the rear lifting gear.

<table>
<thead>
<tr>
<th>Adapter (69329955030)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rear wheel work stand (6932995500033)</td>
</tr>
</tbody>
</table>

– Stand the motorcycle upright, align the lifting gear to the link fork and the adapters, and raise the motorcycle.

### 12.4 Removing the rear of the motorcycle from the wheel stand

**Note**

**Danger of damage** The parked vehicle can roll away or fall over.

– Park the vehicle on a firm and level surface.
12.5 Lifting the motorcycle with the front lifting gear

Note

Danger of damage The parked vehicle can roll away or fall over.
- Park the vehicle on a firm and level surface.

Preparatory work
- Raise the motorcycle with the rear lifting gear. (p. 106)
Main work
– Move the handlebar to the straight-ahead position, align suitable lifting gear at the front.

Front wheel work stand, small (6112996500033)

Info
Always raise the motorcycle at the rear first.

– Lift the motorcycle at the front.

12.6 Taking the motorcycle off the front lifting gear

Note
Danger of damage  The parked vehicle can roll away or fall over.
– Park the vehicle on a firm and level surface.
12 SERVICE WORK ON THE CHASSIS

- Secure the motorcycle against falling over.
- Remove the front lifting gear.

12.7 Cleaning the dust boots of the fork legs

Preparatory work
- Remove the fork protector. (p. 112)

Main work
- Push dust boots 1 of both fork legs downward.

Info
The dust boots remove dust and coarse dirt particles from the inside fork tubes. Over time, dirt can accumulate behind the dust boots. If this dirt is not removed, the oil seals behind can start to leak.
Warning

Danger of accidents  Oil or grease on the brake discs reduces the braking effect.
- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

- Clean and oil the dust boots and inner fork tubes of both fork legs.

Universal oil spray (p. 273)

- Press the dust boots back into their installation position.
- Remove excess oil.

Finishing work
- Install the fork protector. (p. 112)
12 SERVICE WORK ON THE CHASSIS

12.8 Removing the fork protector

- Remove screws 1 and take off the clamp.
- Remove screws 2 on the left fork leg. Take off the fork protector.
- Remove screws 3 on the right fork leg. Take off the fork protector.

12.9 Installing the fork protector

- Position the fork protector on the left fork leg. Mount and tighten screws 1.
  
  **Guideline**
  Remaining screws, chassis  |  M6  |  10 Nm (7.4 lbf ft)

- Position the brake line, wiring harness, and clamp. Mount and tighten screws 2.
- Position the fork protector on the right fork leg. Mount and tighten screws 3.
Guideline

| Remaining screws, chassis | M6 | 10 Nm (7.4 lbf ft) |

12.10 Bleeding the fork legs

Preparatory work
- Raise the motorcycle with a lift stand. (p. 105)

Main work
- Release bleeder screws 1.
  ✔ Any excess pressure escapes from the interior of the fork.
- Tighten the bleeder screws.

Info
Carry out this operation on both fork legs.

Finishing work
- Remove the motorcycle from the lift stand. (p. 105)
12.11 Removing the seat

- Pull on loop 1 while raising the rear of the seat.
- Pull off the seat sideways at the front ends from the side cover.
- Pull seat back and lift it off.

12.12 Mounting the seat

- Stretch the seat at the front ends slightly and position holding tabs 1 on holders 2.
  ✓ The holding tabs engage in the holder.
- Press holding tab 3 into the bushings A.
- Insert locking pin 4 into the lock housing 5 and push down the rear of the seat until the locking pin engages with an audible click.
- Check, finally, that the seat is correctly mounted.
12.13 Removing the tool set

**Preparatory work**
- Remove the seat. (p. 114)

**Main work**
- Take the hexagon socket wrench for loosening and mounting screws 1 and 2 from attachment A on the underside of the seat.
- Remove screws 1.
- Remove screws 2.
- Take off the left side cover.
- Open the tool set compartment and take out tool set 3.
12.14 Storing tool set

### Preparatory work
- Remove the seat. (p. 114)

### Main work
- Remove screws 1.
- Remove screws 2.

### Info
A tool for removing and mounting these screws is located in holder A on the underside of the seat.

- Take off the left side cover.
- Open the tool set compartment and store tool set 3.
- Close the tool set compartment.
- Position the left side cover.
- Mount and tighten screws 2.

**Guideline**

<table>
<thead>
<tr>
<th>Screw, trim</th>
<th>M5x12</th>
<th>3.5 Nm (2.58 lbf ft)</th>
</tr>
</thead>
</table>

- Mount and tighten screws 1.

**Guideline**

<table>
<thead>
<tr>
<th>Screw, front spoiler</th>
<th>M5x17</th>
<th>3.5 Nm (2.58 lbf ft)</th>
</tr>
</thead>
</table>

- Make sure the tool is reinserted in holder A.
Finishing work
- Mount the seat. (p. 114)

12.15 Take off the side cover

Preparatory work
- Remove the seat. (p. 114)

Main work
- Remove screws 1 and 2.
- Take off the side cover.
- Repeat these steps on the opposite side.
12 SERVICE WORK ON THE CHASSIS

12.16 Mounting the side cover

Main work

- Position the side cover, and mount and tighten screws 1.
  Guideline
  | Screw, trim | M5x12 | 3.5 Nm (2.58 lbf ft) |

- Mount and tighten screws 2.
  Guideline
  | Screw, front spoiler | M5x17 | 3.5 Nm (2.58 lbf ft) |

- Repeat these steps on the opposite side.

Finishing work

- Mount the seat. (p. 114)

12.17 Removing front fender

Preparatory work

- Remove the headlight mask with the headlight. (p. 194)
Main work
- Remove screws ①.
- Remove screws ② and take off the fender.

12.18 Installing front fender

Main work
- Position front fender. Mount and tighten screws ①.
  Guideline
  Remaining screws, chassis | M6 | 10 Nm (7.4 lbf ft)

- Mount and tighten screws ②.
  Guideline
  Remaining screws, chassis | M6 | 10 Nm (7.4 lbf ft)

Finishing work
- Install the headlight mask with the headlight. (朏 p. 195)
12 SERVICE WORK ON THE CHASSIS

– Check the headlight setting. (p. 199)

12.19 Removing the air filter

Preparatory work
– Remove the seat. (p. 114)

Main work
– Remove screws ①.
– Remove the upper part of the air filter box ②.
Note

**Engine damage**  Unfiltered intake air has a negative effect on the service life of the engine. Dust and dirt will enter the engine without an air filter.

- Only operate the vehicle if it is equipped with an air filter.
- Remove air filter 3.

---

### 12.20 Installing the air filter

**Main work**

- Clean the air filter box.
- Mount air filter 1.

**Info**

The air filter must lie flush against the air filter box along the entire sealing surface A. If the air filter is not mounted correctly, dust and dirt may enter the engine and result in damage.

- Hook air filter box top 2 into the front of the air filter box and swing down.
12 SERVICE WORK ON THE CHASSIS

12.21 Checking the chain for dirt

- Check the chain for heavy soiling.
  » If the chain is very dirty:
    - Clean the chain. (p. 123)

Finishing work
- Mount the seat. (p. 114)

Guideline

<table>
<thead>
<tr>
<th>Screw, upper part of the air filter box</th>
<th>M6</th>
<th>2 Nm (1.5 lbf ft)</th>
</tr>
</thead>
</table>

Mount and tighten screws 3.
12.22 Cleaning the chain

⚠️ **Warning**
**Danger of accidents** Lubricants on the tires reduces the road grip.
- Remove lubricants from the tires using a suitable cleaning agent.

⚠️ **Warning**
**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.
- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

❗ **Note**
**Environmental hazard** Hazardous substances cause environmental damage.
- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

ℹ️ **Info**
The service life of the chain depends largely on its maintenance.

**Preparatory work**
- Raise the motorcycle with the rear lifting gear. (☞ p. 106)
Main work
- Rinse off loose dirt with a soft jet of water.
- Remove old grease residue with chain cleaner.
  Chain cleaner (p. 272)
- After drying, apply chain spray.
  Street chain spray (p. 273)

Finishing work
- Remove the rear of the motorcycle from the wheel stand.
  (p. 107)
12.23 Checking the chain tension

⚠️ **Warning**

**Danger of accidents** Incorrect chain tension damages components and results in accidents.

- If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded.
- If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.

- Check the chain tension regularly.
- Set the chain tension in accordance with the specification.
- Raise the motorcycle with the rear lifting gear. ( p. 106)

---

**Info**
The check is also possible when the motorcycle is resting on the side stand.

- Shift the transmission to neutral position.
- Push the chain upward at a distance $B$ from the chain sliding guard and determine chain tension $A$.

---

**Info**
The top part of chain $C$ must be taut.
Chain wear is not always even. Repeat this measurement at different chain positions.

<table>
<thead>
<tr>
<th>Chain tension $A$</th>
<th>5 mm (0.2 in)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Distance $B$ to chain sliding guard</td>
<td>30 mm (1.18 in)</td>
</tr>
</tbody>
</table>

» If the chain tension does not meet the specification:
   - Adjust the chain tension. ( p. 127)
   - Remove the rear of the motorcycle from the wheel stand. ( p. 107)
12.24 Adjusting the chain tension

Warning

Danger of accidents Incorrect chain tension damages components and results in accidents. If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded. If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.

– Check the chain tension regularly.
– Set the chain tension in accordance with the specification.

Preparatory work

– Check the chain tension. (p. 125)
Main work
- Loosen nut ①.
- Remove nuts ② on the left and right.
- Adjust the chain tension by turning adjusting screws ③ left and right.

Guideline

<table>
<thead>
<tr>
<th>Chain tension</th>
<th>5 mm (0.2 in)</th>
</tr>
</thead>
</table>

Turn the adjusting screws ③ on the left and right so that the markings on the left and right chain adjusters ④ are in the same position relative to the reference marks A. The rear wheel is then correctly aligned.

Info
The top chain section must be taut.
Chain wear is not always even. Repeat this measurement at different chain positions.

- Tighten nuts ②.
- Make sure that chain adjusters ④ are fitted correctly on adjusting screws ③.
- Tighten nut ①.

Guideline

| Nut, rear wheel spindle | M25x1.5 | 90 Nm (66.4 lbf ft) |
12.25 Checking the chain, rear sprocket, engine sprocket, and chain guide

**Preparatory work**
- Raise the motorcycle with the rear lifting gear. (p. 106)

**Main work**
- Shift the transmission into neutral.
- Check the rear sprocket and engine sprocket for wear.
  - If the rear sprocket or engine sprocket is worn:
    - Change the drivetrain kit.

**Info**
The engine sprocket, rear sprocket and chain should always be replaced together.
Pull on the top section of the chain with the specified weight A.

**Guideline**

| Weight of chain wear measurement | 15 kg (33 lb.) |

Measure distance B of 18 chain rollers in the lower chain section.

**Info**

Chain wear is not always even, so you should repeat this measurement at different chain positions.

| Maximum distance B from 18 chain rollers at the longest chain section | 272 mm (10.71 in) |

If distance B is greater than the specified measurement:
- Change the drivetrain kit.

**Info**

When a new chain is mounted, the rear sprocket and engine sprocket should also be changed.

New chains wear out faster on an old, worn rear sprocket or engine sprocket.
- Check the chain sliding guard for wear.
  » If the lower edge of the chain pins is in line with, or below, the chain sliding guard:
    – Replace the chain sliding guard.
- Check that the chain sliding guard is firmly seated.
  » If the chain sliding guard is loose:
    – Tighten the screws on the chain sliding guard.

Guideline

<table>
<thead>
<tr>
<th>Screw, chain sliding guard</th>
<th>M6</th>
<th>8 Nm (5.9 lbf ft)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>Loctite®243™</td>
</tr>
</tbody>
</table>
12 SERVICE WORK ON THE CHASSIS

- Check the chain sliding piece for wear.
  » If the lower edge of the chain pins is in line with or below the chain sliding piece:
    - Change the chain sliding piece.
  
- Check that the chain sliding piece is firmly seated.
  » If the chain sliding piece is loose:
    - Tighten the screw on the chain sliding piece.

Guideline

| Screw, chain sliding piece | M8 | 15 Nm (11.1 lbf ft) |
- Check the chain guide for wear.

**Info**

> Wear can be seen on the front of the chain guide.

» If the light part of the chain guide is worn:
- Change the chain guide.

- Check that the chain guide is firmly seated.

» If the chain guide is loose:
- Tighten the screws on the chain guide.

**Guideline**

| Screw, chain guide | M6 | 8 Nm (5.9 lbf ft) |

**Finishing work**
- Remove the rear of the motorcycle from the wheel stand.
  (☞ p. 107)
12.26 Adjusting the chain guide

- Remove screws 1 and 2. Take off the chain guide.

**Condition**

Number of teeth: ≤ 44 teeth

- Insert nut 3 in hole A. Position the chain guide.
- Mount and tighten screws 1 and 2.

**Guideline**

| Screw, chain guide | M6 | 8 Nm (5.9 lbf ft) |

Number of teeth: ≥ 45 teeth

- Insert nut 3 in hole B. Position the chain guide.
- Mount and tighten screws 1 and 2.

**Guideline**

| Screw, chain guide | M6 | 8 Nm (5.9 lbf ft) |
12.27 Adjusting the basic position of the clutch lever

Info
When the adjusting screw is turned clockwise, the clutch lever moves closer to the handlebar.
When the adjusting screw is turned counterclockwise, the clutch lever moves away from the handlebar.
The range of adjustment is limited.
Only turn the adjusting screw by hand, and do not use force.
Do not make any adjustments while riding.

- Adjust the basic position of the clutch lever to your hand size by turning adjusting screw ①.
- When adjusting the clutch lever, make sure to leave a minimum clearance to other parts of the vehicle.

Guideline

| Minimum clearance | 5 mm (0.2 in) |

-
12.28 Checking/correcting the fluid level of the hydraulic clutch

**Warning**

Skintiration  Brake fluid causes skin irritation.
- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

**Note**

Environmental hazard  Hazardous substances cause environmental damage.
- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.
Info

The fluid level rises with increasing wear of the clutch facing discs.

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and clutch lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.

Only use clean brake fluid from a sealed container.

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Take off cover 2 with membrane 3.
- Check the fluid level.

| Fluid level A below container rim | 4 mm (0.16 in) |

» If the fluid level does not meet specifications:
  - Correct the fluid level of the hydraulic clutch.

Brake fluid DOT 4 / DOT 5.1 (p. 269)

- Position the cover with the membrane. Mount and tighten the screws.
Clean up overflowed or spilled brake fluid immediately with water.
### 13.1 Anti-lock braking system (ABS)

The ABS module 1, consisting of a hydraulic unit, an ABS control unit and a return pump, is located under the seat. One wheel speed sensor 2 is located in each case on the front and the rear wheel.

#### Warning

**Danger of accidents**  Changes to the vehicle impair the function of the ABS.
- Only allow the rear wheel to spin with the front brake applied if the ABS is switched off (burn out).
- Do not make any changes to the suspension travel.
- Only use spare parts on the brake system which have been approved and recommended by Husqvarna Motorcycles.
- Only use tires/wheels approved by Husqvarna Motorcycles with the corresponding speed index.
- Maintain the specified tire pressure.
- Service work and repairs must be performed professionally. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)
The ABS is a safety system that prevents locking of the wheels when driving straight ahead without the influence of lateral forces.

**Warning**

**Danger of accidents**  Driving aids can reduce the probability of a fall only within physical limits.

It is not always possible to compensate for extreme riding situations, for example with luggage loaded with a high center of gravity, varying road surfaces, steep descents or full braking without disengaging the gear.

– Adapt your riding style to the road conditions and your driving ability.

The ABS operates with two independent brake circuits (front and rear brakes). During normal operation, the brake system operates like a conventional brake system without ABS. When the ABS control unit detects a locking tendency in a wheel, ABS begins regulating the brake pressure. The control function causes a slight pulsing of the hand and foot brake levers.

The ABS warning lamp must light up after the ignition is switched on and go out after starting off. If it does not go out after starting off or if it lights up while riding, this indicates a malfunction in the antilock brake system. In this case, the ABS is no longer enabled and the wheels may lock during braking.
The brake system itself stays functional; only ABS control is not available.
The ABS warning lamp may also light up if the rotating speeds of the front and rear wheels differ greatly under extreme riding conditions, for example when making "wheelies" or if the rear wheel spins. This causes the ABS to switch off.
To reactivate the ABS, stop the vehicle and switch off the ignition. The ABS is reactivated when the vehicle is switched on again. The ABS warning lamp goes out when you start off.
The button can be used to switch the ABS off manually (see Starting).

### 13.2 Adjusting the basic position of the hand brake lever

- Adjust the basic position of the hand brake lever to your hand size by turning adjusting wheel 1.

**Info**

Push the hand brake lever forward and turn the adjusting wheel.

Do not make any adjustments while riding.
13.3 Checking the brake discs

**Warning**

**Danger of accidents**  Worn-out brake discs reduce the braking effect.
- Make sure that worn-out brake discs are replaced immediately. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)

- Check the front and rear brake disc thickness at multiple points for the dimension **A**.

**Info**

Wear will reduce the thickness of the brake disc at contact surface **1** of the brake linings.

<table>
<thead>
<tr>
<th>Brake discs - wear limit</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>front</td>
<td>4.0 mm (0.157 in)</td>
<td></td>
</tr>
<tr>
<td>rear</td>
<td>4.5 mm (0.177 in)</td>
<td></td>
</tr>
</tbody>
</table>

- If the brake disc thickness is less than the specified value.
  - Change the front brake disc.
  - Change the rear brake disc.
- Check the front and rear brake discs for damage, cracking, and deformation.
» If the brake disc exhibits damage, cracking, or deformation:
  – Change the front brake disc.
  – Change the rear brake disc.

13.4 Checking the front brake fluid level

![Warning]

**Danger of accidents**  An insufficient brake fluid level will cause the brake system to fail.
If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.
  – Check the brake system and do not continue riding until the problem is eliminated. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)

![Warning]

**Danger of accidents**  Old brake fluid reduces the braking effect.
  – Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)
Move the brake reservoir mounted on the handlebar to a horizontal position.

Check the brake fluid level in the viewer.

- If the brake fluid level has dropped below the marking A:
  - Add front brake fluid. (p. 144)

**13.5 Adding front brake fluid**

**Warning**

Danger of accidents  An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

- Check the brake system and do not continue riding until the problem is eliminated. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)
Warning

Skin irritation  Brake fluid causes skin irritation.
- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

Warning

Danger of accidents  Old brake fluid reduces the braking effect.
- Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)

Note

Environmental hazard  Hazardous substances cause environmental damage.
- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.
Info
Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.
Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.
Only use clean brake fluid from a sealed container.

Preparatory work
- Check the front brake linings. (p. 147)

Main work
- Move the brake reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Take off cover 2 with membrane 3.
- Add brake fluid to level A.

Guideline

<table>
<thead>
<tr>
<th>Level A (brake fluid level below reservoir rim)</th>
<th>5 mm (0.2 in)</th>
</tr>
</thead>
</table>

Brake fluid DOT 4 / DOT 5.1 (p. 269)
- Position the cover with the membrane. Mount and tighten the screws.
### 13.6 Checking the front brake linings

<table>
<thead>
<tr>
<th>Warning</th>
<th>Danger of accidents</th>
<th>Worn-out brake linings reduce the braking effect.</th>
</tr>

</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>If the brake linings are not changed in time, the brake lining carriers grind against the brake disc. As a consequence, the braking effect is greatly reduced and the brake discs are destroyed.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Check the brake linings regularly.</td>
</tr>
</tbody>
</table>

---

**Info**

Clean up overflowed or spilled brake fluid immediately with water.
13 BRAKE SYSTEM

- Check the brake linings for minimum thickness $A$.

| Minimum thickness $A$ | $\geq 1$ mm ($\geq 0.04$ in) |

» If the minimum thickness is less than specified:
   - Change the front brake linings.

- Check the brake linings for damage and cracking.
  » If there is wear or tearing:
     - Change the front brake linings.

13.7 Checking the free travel of foot brake lever

⚠️ Warning

Danger of accidents  The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

- Set the free travel on the foot brake lever in accordance with the specification.
Move the foot brake lever back and forth between the end stop and the contact to the foot brake cylinder piston and check free travel A.

**Guideline**

| Free travel at foot brake lever | 3 … 5 mm (0.12 … 0.2 in) |

**Info**

You will know that contact has been made with the foot brake cylinder piston when there is increased resistance when you activate the foot brake lever.

» If the free travel does not meet specifications:

– Adjust the basic position of the foot brake lever. (p. 149)

### 13.8 Adjusting the basic position of the foot brake lever

**Warning**

**Danger of accidents**  
The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

– Set the free travel on the foot brake lever in accordance with the specification.
- Loosen fittings 1 on foot brake cylinder 2.
- To adjust the basic position of the foot brake lever to individual requirements, loosen nut 3 and turn screw 4 accordingly.

**Info**
The range of adjustment is limited. The screw must be screwed into the footrest bracket by at least four turns.

- Position foot brake cylinder 2 so that the foot brake lever has the necessary free travel.
- Tighten fittings 1.

**Guideline**
Screw connection, foot brake cylinder

<table>
<thead>
<tr>
<th></th>
<th>M6</th>
<th>10 Nm (7.4 lbf ft)</th>
</tr>
</thead>
</table>

- Check the free travel of the foot brake lever. (p. 148)
- Tighten nut 3.
13.9 Checking the rear brake fluid level

**Warning**

*Danger of accidents*  An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the **MIN** marking, the brake system is leaking or the brake linings are worn down.

- Check the brake system and do not continue riding until the problem is eliminated. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)

**Warning**

*Danger of accidents*  Old brake fluid reduces the braking effect.

- Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)

- Stand the vehicle upright.
- Check the brake fluid level in the brake fluid reservoir.
  - If the fluid level reaches the **MIN** marking 1:
  - Add rear brake fluid. 👆 (p. 152)
13.10 Adding rear brake fluid

**Warning**

**Danger of accidents**  An insufficient brake fluid level will cause the brake system to fail. If the brake fluid level drops below the MIN marking, the brake system is leaking or the brake linings are worn down.

- Check the brake system and do not continue riding until the problem is eliminated. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)

**Warning**

**Skin irritation**  Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.
Warning

Danger of accidents  Old brake fluid reduces the braking effect.
–  Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)

Note

Environmental hazard  Hazardous substances cause environmental damage.
–  Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.
Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.
Only use clean brake fluid from a sealed container.

Preparatory work
–  Check the rear brake linings. (p. 154)
Main work
– Position the vehicle vertically.
– Remove screw cap 1 with the washer and membrane 2.
– Add brake fluid up to the MAX marking.

| Brake fluid DOT 4 / DOT 5.1 (p. 269) |

– Mount the screw cover with washer and the membrane.

Info
Immediately clean up any brake fluid that has overflowed or spilled with water.

13.11 Checking the rear brake linings

Warning
Danger of accidents  Worn-out brake linings reduce the braking effect.
– Ensure that worn-out brake linings are replaced immediately. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)
**Warning**

**Danger of accidents**  Damaged brake discs reduce the braking effect.

If the brake linings are not changed in time, the brake lining carriers grind against the brake disc. As a consequence, the braking effect is greatly reduced and the brake discs are destroyed.

– Check the brake linings regularly.

<table>
<thead>
<tr>
<th>Minimum thickness A</th>
<th>≥ 1 mm (≥ 0.04 in)</th>
</tr>
</thead>
</table>

» If the minimum thickness is less than specified:
  – Change the rear brake linings.

– Check the brake linings for damage and cracking.

» If there is wear or tearing:
  – Change the rear brake linings.
14.1 Removing the front wheel

**Preparatory work**
- Raise the motorcycle with the rear lifting gear. (p. 106)
- Lift the motorcycle with the front lifting gear. (p. 108)

**Main work**
- Remove screw 1 and pull wheel speed sensor 2 out of the hole.
- Remove screws 3 and spacers 4.
- Press back the brake linings by slightly tilting the brake caliper laterally on the brake disc.
- Pull the brake caliper carefully back from the brake disc and hang to the side.

**Info**
Do not operate the hand brake lever if the brake caliper has been removed.
- Loosen screw 5 by several rotations.
- Loosen screws 6.
- Press on screw 5 to push the wheel spindle out of the axle clamp.
- Remove screw 5.

**Warning**

**Danger of accidents**  Damaged brake discs reduce the braking effect.
- Always lay the wheel down in such a way that the brake disc is not damaged.

- Hold front wheel and remove wheel spindle. Take the front wheel out of the fork.
- Remove spacers 7.
14 WHEELS, TIRES

14.2 Installing the front wheel

**Warning**

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

**Main work**

- Check the wheel bearing for damage and wear.
  - If the wheel bearing is damaged or worn:
    - Change front wheel bearing.
- Clean and grease shaft seal rings 1 and contact surfaces A of the spacers.

Long-life grease (p. 272)

- Insert the spacers.
- Clean and grease the wheel spindle.
  Long-life grease ( p. 272)

- Jack up the front wheel into the fork, position it, and insert the wheel spindle.

- Mount and tighten screw  2.
  Guideline
  Screw, front wheel spindle | M24x1.5 | 45 Nm (33.2 lbf ft)

- Position wheel speed sensor  3 in the hole.

- Mount and tighten screw 4.
  Guideline
  Screw, wheel speed sensor | M6 | 6 Nm (4.4 lbf ft)

- Position the brake caliper on the brake disc.
  ✓ The brake linings are correctly positioned.

- Position spacers  5. Mount screws 6, but do not tighten yet.
  Guideline
  Screw, front brake caliper | M10x1.25 | 45 Nm (33.2 lbf ft)  
  Loctite®243™
Operate the hand brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point. Secure the hand brake lever in the activated position. The brake caliper straightens.

Tighten screws 6.

Guideline

<table>
<thead>
<tr>
<th>Screw, front brake caliper</th>
<th>M10x1.25</th>
<th>45 Nm (33.2 lbf ft)</th>
<th>Loctite®243™</th>
</tr>
</thead>
</table>

Remove the locking piece of the hand brake lever.

Take the motorcycle off the front lifting gear. (p. 109)

Operate the front brake and compress the fork a few times firmly. The fork legs straighten.

Tighten screws 7.

Guideline

<table>
<thead>
<tr>
<th>Screw, fork stub</th>
<th>M8</th>
<th>15 Nm (11.1 lbf ft)</th>
</tr>
</thead>
</table>

Finishing work

Remove the rear of the motorcycle from the wheel stand. (p. 107)
14.3 Removing the rear wheel

Preparatory work
- Raise the motorcycle with the rear lifting gear. (p. 106)

Main work
- Take the brake line out of the guide.
- Manually press the brake caliper toward the brake disc to push back the brake piston.
- Remove screw 1 and pull wheel speed sensor 2 out of the hole.
- Remove nut 3. Take off chain adjuster 4.
- Pull out wheel spindle 5 to the point where the chain adjuster is no longer in contact with the adjusting screw.
Push the rear wheel forward as far as possible and take the chain off the rear sprocket.

**Info**
Cover the components to protect them against damage.

Hold the rear wheel and remove the wheel spindle.

**Warning**
*Danger of accidents*  
Damaged brake discs reduce the braking effect.
- Always lay the wheel down in such a way that the brake disc is not damaged.

Take the rear wheel out of the link fork.

**Info**
Do not operate the foot brake when the rear wheel is removed.
14.4 Installing the rear wheel

**Warning**

**Danger of accidents**  Oil or grease on the brake discs reduces the braking effect.
- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

**Warning**

**Danger of accidents**  There is no braking effect to start with at the rear brake after installing the rear wheel.
- Actuate the foot brake several times before going on a ride until you can feel a firm pressure point.

**Main work**
- Check the rear hub damping rubber pieces. (p. 167)
Check the wheel bearing for damage and wear.

» If the wheel bearing is damaged or worn:
  - Change the rear wheel bearing.

- Clean and grease shaft seal ring 1 and contact surface A of the spacer.

| Long-life grease (p. 272) |

- Insert a spacer.
- Clean and grease the thread of the wheel spindle and nut ②.

Long-life grease (p. 272)

- Clean and grease the wheel spindle.

Long-life grease (p. 272)

- Mount the damping rubber and rear sprocket carrier in the rear wheel.

- Position the rear wheel.

✔️ The brake linings are correctly positioned.

- Push the rear wheel forward as far as possible and lay the chain on the rear sprocket.

- Mount wheel spindle ③ and chain adjuster ④. Mount nut ②, but do not tighten yet.

- Make sure that chain adjusters ④ are fitted correctly on adjusting screws ⑤.

Guideline

In order for the rear wheel to be correctly aligned, the markings on the left and right chain adjusters must be in the same position relative to reference markings B.

Info

Mount left and right chain adjusters ④ in the same position.
- Tighten nut 2.
  Guideline
  | Nut, rear wheel spindle | M25x1.5 | 90 Nm (66.4 lbf ft) |
- Position wheel speed sensor 6 in the hole.
- Mount and tighten screw 7.
  Guideline
  | Screw, wheel speed sensor | M6 | 6 Nm (4.4 lbf ft) |
- Position the brake line in the guide.
- Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.

**Finishing work**
- Remove the rear of the motorcycle from the wheel stand. (p. 107)
- Check the chain tension. (p. 125)
14.5 Checking the rear hub damping rubber pieces

Info
The engine power is transmitted from the rear sprocket to the rear wheel via the 6 damping rubber pieces. They eventually wear out during operation. If the damping rubber pieces are not changed in time, the rear sprocket carrier and the rear hub will be damaged.

Preparatory work
- Raise the motorcycle with the rear lifting gear. (p. 106)
- Remove the rear wheel. (p. 161)

Main work
- Check bearing 1.
  » If the bearing is damaged or worn:
    - Change the bearing of the rear sprocket carrier.
- Check the damping rubber pieces 2 of the rear hub for damage and wear.
  » If the damping rubber pieces of the rear hub are damaged or worn:
    - Change all the damping rubber pieces of the rear hub.
- Lay the rear wheel on a workbench with the rear sprocket facing upwards and insert the wheel spindle in the hub.
- To check play A, hold the rear wheel tight and try to turn the rear sprocket with your hand.

**Info**
Measure the play on the outside of the rear sprocket.

<table>
<thead>
<tr>
<th>Play of damping rubber pieces on rear wheel</th>
<th>≤ 5 mm (≤ 0.2 in)</th>
</tr>
</thead>
</table>

» If clearance A is larger than the specified value:
- Change all the damping rubber pieces of the rear hub.

**Finishing work**
- Install the rear wheel. (☞ p. 163)
- Remove the rear of the motorcycle from the wheel stand. (☞ p. 107)
- Check the chain tension. (☞ p. 125)
14.6 Checking the tire condition

⚠️ Warning

**Danger of accidents**  If a tire bursts while riding, the vehicle becomes uncontrollable.
- Ensure that damaged or worn tires are replaced immediately. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)

⚠️ Warning

**Danger of crashing**  Different tire tread patterns on the front and rear wheel impair the handling characteristic.
Different tire tread patterns can make the vehicle significantly more difficult to control.
- Make sure that only tires with a similar tire tread pattern are fitted to the front and rear wheel.

⚠️ Warning

**Danger of accidents**  Non-approved or non-recommended tires and wheels impact the handling characteristic.
- Only use tires/wheels approved by Husqvarna Motorcycles with the corresponding speed index.
Warning

Danger of accidents  New tires have reduced road grip.
The contact surface on new tires is not yet roughened.

– Run in new tires with moderate riding at alternating angles.
  Running-in phase  200 km (124 mi)

Info

The type, condition, and pressure of the tires all have a major impact on the handling characteristic of the motorcycle.

Worn tires have a negative effect on handling characteristics, especially on wet surfaces.

– Check the front and rear tires for cuts, run-in objects, and other damage.
  » If the tires have cuts, run-in objects, or other damage:
    – Change the tires.
– Check the tread depth.

Info

Adhere to the legally required minimum tread depth.

| Minimum tread depth | ≥ 2 mm (≥ 0.08 in) |

» If the tread depth is less than the minimum tread depth:
  – Change the tires.
Check the tire age.

**Info**

The tire date of manufacture is usually contained in the tire label and is indicated by the last four digits of the DOT number. The first two digits indicate the week of manufacture and the last two digits the year of manufacture.

Husqvarna Motorcycles recommends that the tires be changed after 5 years at the latest, regardless of the actual state of wear.

» If the tires are more than 5 years old:

- Change the tires.
14.7 Tubeless tire system

This vehicle uses a tubeless tire system in which a rim seal band 1 is used instead of the conventional tube. The advantages of the tubeless system lie in the absence of danger from a faulty tube. This greatly reduces the risk of a sudden loss in pressure. The moments of inertia of these wheels are smaller than in conventional spoked wheels with a tube. This results in better handling and riding comfort. The rigid rim design results in a wire spoke wheel that is almost entirely maintenance-free. Husqvarna Motorcycles recommends that the rim seal band is changed after 5 years at the latest, regardless of the actual state of wear.
14.8 Checking tire pressure

**Info**
Low tire pressure leads to abnormal wear and overheating of the tire. Correct tire pressure ensures optimal riding comfort and maximum tire service life.

- Remove the protection cap.
- Check the tire pressure when the tires are cold.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Tire pressure when solo</strong></td>
<td></td>

<tbody>
<tr>
<td><strong>Tire pressure with passenger / full payload</strong></td>
<td></td>
</tr>
<tr>
<td>front</td>
<td>2.0 bar (29 psi)</td>
</tr>
<tr>
<td>rear</td>
<td>2.2 bar (32 psi)</td>
</tr>
</tbody>
</table>

» If the tire pressure does not meet specifications:
- Correct the tire pressure.
- Mount the protection cap.
14.9 Checking spoke tension

**Warning**

**Danger of accidents** Incorrectly tensioned spokes impair the handling characteristic and result in secondary damage.

The spokes break due to being overloaded if they are too tightly tensioned. If the tension in the spokes is too low, then lateral and radial run-out will form in the wheel. Other spokes will become looser as a result.

- Check spoke tension regularly, and in particular on a new vehicle. (Your authorized Husqvarna Motorcycles workshop will be glad to help.)

**Info**

A loose spoke can unbalance the wheel and other spokes may loosen within a short period.

If the spokes are too tight, they can break due to local overload.

Check the spoke tension regularly, especially on a new motorcycle.
Strike each spoke briefly using a screwdriver blade.

### Info
The frequency of the sound depends on the spoke length and spoke diameter. If you hear different tone frequencies from different spokes of equal length and diameter, this is an indication of different spoke tensions.

You should hear a high note.

» If the spoke tension differs:
   - Correct the spoke tension.
14.10 Using tire repair spray

**Warning**

**Danger of accidents** Incorrect use of tire repair spray will result in the repaired tire losing pressure.

Tire repair spray cannot be used for all types of damage.

- Observe the instructions and specifications of the manufacturer of the tire repair spray.
- After repairing a tire with tire repair spray, ride slowly and carefully.
- Ride no further than to the nearest workshop and have the tire changed.

Tire repair spray should only be used in an emergency. We recommend transporting the broken down vehicle to the nearest workshop instead of using tire repair spray.
### Warning

**Risk of injury**  Battery acid and battery gases cause serious chemical burns.
- Keep 12 V batteries out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Avoid contact with battery acid and battery gases.
- Keep sparks or open flames away from the 12 V battery.
- Only charge 12 V batteries in well-ventilated rooms.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes with water for at least 15 minutes and consult a doctor immediately if battery acid and battery gases get into the eyes.

---

**Preparatory work**
- Remove the seat. (p. 114)
Main work
- Pull engine electronics control unit ① off the holder and set it to one side.

- Remove screws ②.
- Pull retaining bracket ③ of the 12-V battery forward and remove it.
- Disconnect negative cable 4 from the 12-V battery.
- Take off positive terminal cover 5.

- Disconnect ABS connection cable 6 and positive cable 7 from the 12-V battery.
- Lift out the 12-V battery.

---

**Info**

Never operate the motorcycle with a discharged 12-V battery or without a 12-V battery. In both cases, electrical components and safety devices can be damaged. The vehicle will therefore no longer be roadworthy.
15.2 Installing the 12-V battery

Main work
- Insert the 12-V battery into the battery compartment with the terminals facing to the rear.

12-V battery (YTZ10S) (p. 258)
- Position washer 1, positive cable 2, and ABS connection cable 3.
- Mount and tighten screw 4.

Guideline

| Screw, battery terminal | M6 | 4.5 Nm (3.32 lbf ft) |

- Position positive terminal cover 5.
- Position washer 6 and negative cable 7.
- Mount and tighten screw 8.

Guideline

| Screw, battery terminal | M6 | 4.5 Nm (3.32 lbf ft) |
- Position retaining bracket 9 and mount and tighten screws 10.

Guideline

<table>
<thead>
<tr>
<th>Remaining screws, chassis</th>
<th>M6</th>
<th>10 Nm (7.4 lbf ft)</th>
</tr>
</thead>
</table>

- Mount engine electronics control unit 11.

**Finishing work**
- Mount the seat. (p. 114)
- Set the clock. (p. 59)
15 ELECTRICAL SYSTEM

15.3 Charging the 12-V battery

**Warning**

**Risk of injury**  Battery acid and battery gases cause serious chemical burns.
- Keep 12 V batteries out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Avoid contact with battery acid and battery gases.
- Keep sparks or open flames away from the 12 V battery.
- Only charge 12 V batteries in well-ventilated rooms.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes with water for at least 15 minutes and consult a doctor immediately if battery acid and battery gases get into the eyes.

**Note**

**Environmental hazard**  12 V batteries contain environmentally hazardous materials.
- Do not dispose of 12 V batteries as household waste.
- Dispose of 12 V batteries at a collection point for used batteries.

**Note**

**Environmental hazard**  Hazardous substances cause environmental damage.
- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.
Info
Even if there is no load on the 12-V battery, it discharges steadily. The charging level and the method of charging are very important for the service life of the 12-V battery. Rapid recharging with a high charging current shortens the service life of the battery. If the charging current, charging voltage, or charging time is exceeded, electrolyte escapes through the safety valves. This reduces the capacity of the 12-V battery. If the 12-V battery is depleted by repeated starting, the 12-V battery must be charged immediately. If the 12-V battery is left in a discharged state for an extended period, it will become deeply discharged and sulfating occurs, destroying the battery. The 12-V battery is maintenance-free. The acid level does not have to be checked.

Preparatory work
- Remove the seat. (p. 114)
- Remove the 12-V battery. (p. 177)

Main work
- Connect the battery charger to the 12-V battery. Switch on the battery charger.

Guideline
The battery charger must be suitable for the 12-V battery.

Info
Never remove cover 1. Charge the 12 V battery to a maximum of 10 % of the capacity specified on battery housing 2.
– Switch off the battery charger after charging and disconnect from the 12 V battery.

Guideline

<table>
<thead>
<tr>
<th>The charging current, charging voltage, and charging time must not be exceeded.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Recharge the 12-V battery regularly when the motorcycle is not being used</td>
</tr>
<tr>
<td>3 months</td>
</tr>
</tbody>
</table>

**Finishing work**

– Install the 12-V battery. (p. 180)
– Mount the seat. (p. 114)
– Set the clock. (p. 59)

### 15.4 Changing the main fuse

**Warning**

**Fire hazard** Incorrect fuses overload the electrical system.
– Only use fuses with the required ampere value.
– Do not bypass or repair fuses.
Info
The main fuse protects all electrical power consumers of the vehicle. It is in the housing of the starter relay next to the 12-V battery.

Preparatory work
– Remove the seat. (p. 114)

Main work
– Take off protection caps 1.
- Remove a defective main fuse ② with needle nose pliers.

**Info**

A faulty fuse has a burned-out fuse wire A. A spare fuse ③ is located in the starter relay.

- Insert a new main fuse.

**Info**

Insert a new spare fuse into the starter relay to have it available when needed.

- Check that the electrical system is functioning properly.
- Mount the protection caps.

**Finishing work**

- Mount the seat. (p. 114)
- Set the clock. (p. 59)
15.5 Changing the ABS fuses

**Warning**

**Fire hazard** Incorrect fuses overload the electrical system.
- Only use fuses with the required ampere value.
- Do not bypass or repair fuses.

**Info**

Two fuses for the ABS are located under the seat. These fuses protect the return pump and the hydraulic unit of the ABS. The third fuse, which protects the ABS control unit, is located in the fuse box.

**Preparatory work**
- Remove the seat. (☞ p. 114)
- Pull the engine electronics control unit off the holder and set it to one side.
Main work
- Remove screws 1.
- Pull retaining bracket 2 of the 12-V battery forward and remove it.

- Unlock holding lug 3 and lift off holder 4.
To change the fuse of the ABS hydraulic unit:
- Take off the protection cap and remove fuse 5.
- Insert a new fuse.
  Fuse (58011109115) (p. 258)
- Mount the protection cap.

To change the fuse of the ABS return pump:
- Take off the protection cap and remove fuse 6.
- Insert a new fuse.
  Fuse (58011109125) (p. 259)
- Mount the protection cap.
- Position holder 4.
  ✔ Holding lug 3 engages audibly.

- Position retaining bracket 2 and mount and tighten screws 1.

  Guideline
  | Remaining screws, chassis | M6   | 10 Nm (7.4 lbf ft) |

**Finishing work**
- Position the engine electronics control unit.
- Mount the seat. (p. 114)
15.6 Changing the fuses of individual electrical power consumers

Info
The fuse box containing the fuses of individual electrical power consumers is located under the seat.

Preparatory work
– Remove the seat. (p. 114)

Main work
– Open fuse box cover 1.
– Remove the faulty fuse.

Guideline

<table>
<thead>

</tbody>
</table>

Info

A faulty fuse has a burned-out fuse wire A.
Warning

Fire hazard Incorrect fuses overload the electrical system.
- Only use fuses with the required ampere value.
- Do not bypass or repair fuses.

- Insert the spare fuse with the correct rating.

<table>
<thead>
<tr>
<th>Fuse (75011088010) (p. 258)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fuse (75011088015) (p. 258)</td>
</tr>
</tbody>
</table>

Tip

Put a spare fuse in the fuse box so that it is available if needed.

- Check the function of the electrical power consumer.
- Close the fuse box cover.

Finishing work
- Mount the seat. (p. 114)
15.7 Removing the headlight mask with the headlight

- Cover the fender with a cloth to protect it from damage.
- Detach the brake line and wiring harness from holder 1.
- Remove screws 2 on both sides.
- Swivel the headlight mask forward.

- Disconnect plug-in connector 3 of the headlight.
- Take off the headlight mask.
15.8 Installing the headlight mask with the headlight

Main work

– Connect plug-in connector 1 of the headlight.
– Check that the lighting is functioning properly.

– Remove the cloth from the fender and position the headlight mask.

✔ Both holding lugs 2 engage in drilled holes 3 of the fender.
Mount and tighten screws 4.

Guideline

| Screw, headlight mask | M5 | 5 Nm (3.7 lbf ft) |

Mount the brake line and wiring harness in holder 5.

Finishing work

– Check the headlight setting. (☞ p. 199)

15.9 Changing the headlight bulb

Note

Damage to reflector  Grease on the reflector reduces the light intensity. Grease on the bulb will evaporate due to the heat and be deposited on the reflector.

– Clean and degrease the bulbs before mounting.
– Do not touch the bulbs with your bare hands.

Preparatory work

– Remove the headlight mask with the headlight. (☞ p. 194)
Main work
- Turn protection cap 1 together with the underlying bulb socket counterclockwise all the way and remove it.
- Pull out headlight bulb 2.
- Insert the new headlight bulb.

Info
Ensure that O-ring 3 is seated properly.

Finishing work
- Install the headlight mask with the headlight. ( p. 195)
- Check the headlight setting. ( p. 199)
15.10 Changing the parking light bulb

**Note**

**Damage to reflector** Grease on the reflector reduces the light intensity. Grease on the bulb will evaporate due to the heat and be deposited on the reflector.

- Clean and degrease the bulbs before mounting.
- Do not touch the bulbs with your bare hands.

**Preparatory work**

- Remove the headlight mask with the headlight. (p. 194)

**Main work**

- Pull bulb socket 1 out of the reflector.
- Pull parking light bulb 2 out of the bulb socket.
- Insert a new parking light bulb in the bulb socket.

  Position light (W5W / socket W2.1x9.5d) (p. 259)

- Insert the bulb socket in the reflector.

**Finishing work**

- Install the headlight mask with the headlight. (p. 195)
- Check the headlight setting. (p. 199)
15.11 Checking the headlight setting

- Position the vehicle upright on a horizontal surface in front of a light wall and make a marking at the height of the center of the low beam headlight.

- Make another mark at a distance $B$ under the first marking.
  
  **Guideline**
  
  | Distance $B$ | 5 cm (2 in) |
  
- Position the vehicle vertically at a distance $A$ away from the wall.
  
  **Guideline**
  
  | Distance $A$ | 5 m (16 ft) |
  
- The rider now mounts the motorcycle with luggage and passenger if applicable.
- Switch on the low beam.
- Check the headlight setting.

The light-dark boundary must be exactly on the lower marking when the motorcycle is ready to be operated with the rider mounted along with any luggage and a passenger if applicable.

» If the boundary between light and dark does not meet specifications:
  - Adjust the headlight range. (☞ p. 200)
15.12 Adjusting the headlight range

Preparatory work
– Check the headlight setting. (p. 199)

Main work
– Loosen screw 1.
– Adjust the headlight range by pivoting the headlight.

Guideline
The boundary between light and dark must be exactly on the lower mark for a motorcycle with rider (instructions on how to apply the mark: Checking the headlight setting).

Info
If you have a payload, you may have to correct the headlight range.

– Tighten screw 1.
15.13 Changing the turn signal bulb

Note

**Damage to reflector** Grease on the reflector reduces the light intensity. Grease on the bulb will evaporate due to the heat and be deposited on the reflector.

- Clean and degrease the bulbs before mounting.
- Do not touch the bulbs with your bare hands.

- Remove the screw on the rear of the turn signal housing.
- Carefully remove turn signal glass 1.
- Press bulb 2 carefully into the socket, turn it counterclockwise by about 30°, and take it out of the socket.

**Info**

Do not touch the reflector with your fingers and keep it free from grease.

- Push the new bulb gently into the socket and turn it clockwise all the way in.

**Turn signal (RY10W/socket BAU15s)** (p. 259)

- Check that the turn signal is functioning properly.
- Position the turn signal glass.
Insert holding lug A into cut-out B.

- Insert the screw and first turn counterclockwise until it engages in the thread with a small jerk. Tighten the screw lightly.

15.14 ACC1 and ACC2

Installation location
- The power supplies ACC1 1 and ACC2 2 are located behind the headlight mask.

Info
- The power supplies are protected by a fuse; however, this fuse also protects other electrical power consumers. The maximum continuous load is therefore significantly lower than the value of the fuse. Do not use a stronger fuse.
Diagnostics connector ① is located under the engine electronics control unit.
16.1 Cooling system

Water pump 1 in the engine ensures forced circulation of the coolant. The pressure resulting from the warming of the cooling system is regulated by a valve in radiator cap 2. Heat expansion causes excess coolant to flow into compensating tank 3. When the temperature falls, this surplus coolant is sucked back into the cooling system. This ensures that operating the vehicle at the specified coolant temperature will not result in a risk of malfunctions.

125 °C (257 °F)

The coolant is cooled by the air stream and a radiator fan, which is activated at high temperature. The lower the speed, the less the cooling effect. Dirty cooling fins also reduce the cooling effect.
16.2 Checking the antifreeze and coolant level

Warning
Danger of scalding  During motorcycle operation, the coolant gets very hot and is under pressure.

– Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.

– Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.

– In the event of scalding, rinse the area affected immediately with lukewarm water.

Warning
Danger of poisoning  Coolant is toxic and a health hazard.

– Keep coolant out of the reach of children.

– Do not allow coolant to come into contact with the skin, the eyes and clothing.

– Consult a doctor immediately if coolant is swallowed.

– Rinse the affected area immediately with plenty of water in the event of contact with the skin.

– Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.

– Change clothing if coolant spills onto your clothing.

Condition
The engine is cold.
- Stand the motorcycle on its side stand on a horizontal surface.
- Remove cover 1 of the compensating tank.
- Remove radiator cap 2.
- Check the antifreeze in the coolant.

\[-25 \ldots \ -45 \, ^\circ \text{C (}\ -13 \ldots \ -49 \, ^\circ \text{F)}\]

- If the antifreeze in the coolant does not match the specified value:
  - Correct the antifreeze in the coolant.
- Check the coolant level in the compensating tank.

The coolant level must be between the two markings.

- If the coolant level does not match the specified value:
  - Correct the coolant level.

Coolant (p. 269)

- Mount cover 1 of the compensating tank.
- Check the coolant level in the radiator.

The radiator must be filled completely.

- If the coolant level does not match the specified value:
  - Check the coolant level and the reason for the loss.
- Mount radiator cap 2.
16.3 Checking the coolant level

**Warning**

**Danger of scalding**  During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

**Warning**

**Danger of poisoning**  Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

**Condition**

The engine is cold.
Stand the motorcycle on its side stand on a horizontal surface.

Check the coolant level in compensating tank ①.

The coolant level must be between the two markings.

» If the coolant level does not match the specified value:
  - Correct the coolant level.

Remove radiator cap ② and check the coolant level in the radiator.

The radiator must be filled completely.

» If the coolant level does not match the specified value:
  - Check the coolant level and the reason for the loss.

Mount the radiator cap.
16.4 Draining the coolant

**Warning**

**Danger of scalding**  During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

**Warning**

**Danger of poisoning**  Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

**Condition**

The engine is cold.
16 COOLING SYSTEM

- Position the motorcycle upright.
- Position an appropriate container under the engine.
- Remove screw 1 with the seal ring.
- Remove the radiator cap.
- Completely drain the coolant.
- Mount and tighten screw 1 with a new seal ring.

Guideline

| Screw plug, water pump drain hole | M10x1 | 15 Nm (11.1 lbf ft) |

16.5 Filling/bleeding the cooling system

Warning

Danger of poisoning  Coolant is toxic and a health hazard.
- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.
– Stand the motorcycle on its side stand on a horizontal surface.
– Remove radiator cap 1.

– Refill with coolant.

<table>
<thead>
<tr>
<th>Coolant</th>
<th>1.20 l</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(1.27 qt.)</td>
</tr>
</tbody>
</table>

– Completely fill the radiator with coolant.
– Mount radiator cap 1.
- Remove cover ② of the compensating tank.
- Add coolant up to a level between the two marks.
- Mount the cover of the compensating tank.

---

**Danger**

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.

---

- Start the engine and let it warm up.
- Stop the engine and allow it to cool down.
- Check the coolant level. (p. 207)
16.6 Changing the coolant

Warning
Danger of scalding  During motorcycle operation, the coolant gets very hot and is under pressure.
- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

Warning
Danger of poisoning  Coolant is toxic and a health hazard.
- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

Condition
The engine is cold.
Main work
- Position the motorcycle upright.
- Position an appropriate container under the engine.
- Remove screw 1 with the seal ring.
- Remove radiator cap 2.
- Completely drain the coolant.
Mount and tighten screw 1 with a new seal ring.

Guideline

<table>
<thead>
<tr>
<th>Screw plug, water pump drain hole</th>
<th>M10x1</th>
<th>15 Nm (11.1 lbf ft)</th>
</tr>
</thead>
</table>

Stand the motorcycle on a level surface using the side stand.

Refill with coolant.

<table>
<thead>
<tr>
<th>Coolant</th>
<th>1.20 l (1.27 qt.)</th>
<th>Coolant (p. 269)</th>
</tr>
</thead>
</table>

Completely fill the radiator with coolant.

Mount radiator cap 2.
- Remove cover 3 of the compensating tank.
- Add coolant up to a level between the two marks.
- Mount cover 3 of the compensating tank.

Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.
- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.

- Start the engine and allow it to warm up.
- Stop the engine and allow it to cool down.

Finishing work
- Check the coolant level. (p. 207)
17.1 Changing the riding mode

**Info**
The desired drive mode can be activated via the MAP button on the combination switch. The setting most recently selected is activated again when restarting. The drive mode can also be changed during the ride.

**Condition**
Throttle grip closed.
- Press MAP button until the LED displays the desired drive mode. Drive mode 1 is STREET and drive mode 2 is SPORT.
  ✓ STREET – balanced response
  ✓ SPORT – direct response

**Info**
The drive mode only influences the throttle response. The homologated performance is available in both drive modes. In drive mode 2, the traction control allows more slip and rise of the front wheel.
17.2 Adjusting traction control

**Info**

Traction control is activated when the ignition is switched on.
The traction control lowers the tightening torque in case of loss of traction in the rear wheel.
When traction control is switched off, the rear wheel may spin during high acceleration and on surfaces with low grip, resulting in a risk of crashing.
Traction control can also be adjusted during the ride.
Traction control cannot be deactivated until a minimum speed has previously been reached and the self test is complete.

---

**Deactivating traction control:**

**Condition**

- Throttle grip closed.
- Speed before deactivation: \( \geq 4 \text{ km/h} (\geq 2.5 \text{ mph}) \)
  - Press and hold button TC for 5 seconds.
    - The TC LED lights up when the traction control is deactivated.

**Activating the traction control:**

**Condition**

- Throttle grip closed.
  - Press and hold button TC for 5 seconds.
    - The TC LED does not light up when the traction control is activated.
If the TC indicator lamp and both drive mode lamps light up at the same time, an error has been detected in the traction control. Contact an authorized Husqvarna Motorcycles workshop.

17.3 Checking the basic position of the shift lever

Info
When driving, the shift lever must not touch the rider's boot when in the basic position. When the shift lever keeps touching the boot, the transmission will be subject to an excessive load.

- Sit on the vehicle in the riding position and determine distance A between the upper edge of your boot and the shift lever.

| Distance between shift lever and upper edge of boot | 10 ... 20 mm (0.39 ... 0.79 in) |

» If the distance does not meet specifications:
  - Adjust the basic position of the shift lever. (☞ p. 220)
17.4 Adjusting the basic position of the shift lever

- Remove screw 1 with the washers and take off shift lever 2.

- Clean gear teeth A of the shift lever and shift shaft.

- Mount shift lever 2 on the shift shaft in the required position and engage the gearing.

Info
The range of adjustment is limited. The shift lever must not come into contact with any other vehicle components during the shift procedure.

- Mount and tighten screw 1 with the washers.

Guideline

<table>
<thead>
<tr>
<th>Screw, shift lever</th>
<th>M6</th>
<th>14 Nm (10.3 lbf ft) Loctite®243™</th>
</tr>
</thead>
</table>
18.1 Changing the fuel screen

**Danger**

**Fire hazard**  Fuel is highly flammable.  
The fuel in the fuel tank expands when warm and can escape if overfilled.  
- Do not fuel the vehicle in the vicinity of open flames or lit cigarettes.  
- Switch off the engine for refueling.  
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.  
- If any fuel is spilled, wipe it off immediately.  
- Observe the specifications for refueling.

**Warning**

**Danger of poisoning**  Fuel is poisonous and a health hazard.  
- Avoid skin, eye and clothing contact with fuel.  
- Immediately consult a doctor if you swallow fuel.  
- Do not inhale fuel vapors.  
- In case of skin contact, rinse the affected area with plenty of water.  
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.  
- Change your clothing in case of fuel spills on them.
Note

Environmental hazard  Improper handling of fuel is a danger to the environment.
  – Do not allow fuel to enter the groundwater, the soil, or the sewage system.

- Clean quick release coupling 1 thoroughly with compressed air.

Info

Under no circumstances should dirt enter into the fuel line. Dirt in the fuel line clogs the injection valve!

- Disconnect quick release coupling 1.
- Pull fuel screen 2 out of the connecting piece.
- Insert the new fuel screen all the way into the connecting piece.
- Spray silicone spray onto a lint-free cleaning cloth and lightly lubricate the O-ring of the quick-release coupling.
  
  Silicone spray (p. 273)

- Join the quick release coupling.
Danger

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.
- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.

- Start the engine and check the response.

### 18.2 Checking the engine oil level

**Condition**
The engine is at operating temperature.

**Preparatory work**
- Stand the motorcycle upright on a horizontal surface.
Main work
– Check the engine oil level.

Info
After switching off the engine, wait one minute before checking the level.

The engine oil must be between marking A and marking B of the oil level viewer.

» If the engine oil level is below the B mark:
  – Add engine oil. (p. 232)

» If the engine oil level is above the A mark:
  – Correct the engine oil level.

18.3 Changing the engine oil and oil filter, cleaning the oil screens

Warning
Danger of scalding  Engine and gear oil get very hot when the motorcycle is ridden.
  – Wear suitable protective clothing and safety gloves.
  – In the event of scalding, rinse the area affected immediately with lukewarm water.
Note
Environmental hazard   Hazardous substances cause environmental damage.
   – Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

Info
Drain the engine oil while the engine is at operating temperature.

Main work
   – Position an appropriate container under the engine.
   – Remove filler plug 1 with the O-ring.
- Remove oil drain plug ② with the magnet and seal ring.
- Allow the engine oil to drain completely.

- Thoroughly clean the oil drain plug with magnet.
- Mount and tighten the oil drain plug with the magnet and new seal ring.

Guideline

| Oil drain plug with magnet | M12x1.5 | 20 Nm (14.8 lbf ft) |
SERVICE WORK ON THE ENGINE

- Remove screws ③. Remove oil filter cover ④ with the O-ring.
- Pull oil filter ⑤ out of the oil filter housing.

Lock ring plier (51012011000)

- Remove screws ⑥. Remove oil filter cover ⑦ with the O-ring.
- Pull oil filter ⑧ out of the oil filter housing.

Lock ring plier (51012011000)

- Allow the engine oil to drain completely.
- Thoroughly clean the parts and the sealing surfaces.
- Remove screw plug 9 with oil screen 10 and the O-rings.
- Remove screw plug 11 with oil screen 12 and the O-rings.
- Allow the engine oil to drain completely.
- Thoroughly clean the parts and the sealing surfaces.
- Position oil screen 10 with the O-rings on a pin wrench.
- Position the pin wrench through the drill hole of the screw plug in the opposite section of the engine case.
- Push the oil screen all the way into the engine case.

- Mount and tighten screw plug 9 with the O-ring.

Guideline

<table>
<thead>
<tr>
<th>Plug, oil screen</th>
<th>M20x1.5</th>
<th>15 Nm (11.1 lbf ft)</th>
</tr>
</thead>
</table>
- Position oil screen 12 with the O-rings.
- Mount and tighten screw plug 11 with the O-ring.

**Guideline**

<table>
<thead>
<tr>
<th>Part</th>
<th>Specification</th>
<th>Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>Plug, oil screen</td>
<td>M20×1.5</td>
<td>15 Nm (11.1 lbf ft)</td>
</tr>
</tbody>
</table>

- Insert new oil filter 5.
- Lubricate the O-ring of the oil filter cover. Position oil filter cover 4.
- Mount and tighten screws 3.

**Guideline**

<table>
<thead>
<tr>
<th>Part</th>
<th>Specification</th>
<th>Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>Screw, oil filter cover</td>
<td>M5</td>
<td>6 Nm (4.4 lbf ft)</td>
</tr>
</tbody>
</table>
- Insert new oil filter 8.
- Lubricate the O-ring of the oil filter cover. Position oil filter cover 7.
- Mount and tighten screws 6.

**Guideline**

<table>
<thead>
<tr>
<th>Screw, oil filter cover</th>
<th>M5</th>
<th>6 Nm (4.4 lbf ft)</th>
</tr>
</thead>
</table>

- Fill up with engine oil at the clutch cover.

<table>
<thead>
<tr>
<th>Engine oil</th>
<th>1.70 l (1.8 qt.)</th>
<th>Engine oil (SAE 10W/50) (p. 270)</th>
</tr>
</thead>
</table>

**Info**

Too little engine oil or poor-quality engine oil will result in premature wear of the engine.
Mount and tighten filler plug 1 with the O-ring.

**Danger**

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.

Start the engine and check for leaks.

**Finishing work**
- Check the engine oil level. (p. 223)

### 18.4 Adding engine oil

**Info**
Too little engine oil or poor-quality engine oil will result in premature wear of the engine.
Main work
- Remove filler plug 1 with the O-ring, and fill up with engine oil.
- Fill engine oil to the middle of the level viewer.

| Engine oil (SAE 10W/50) (p. 270) |

Info
For optimal performance of the engine oil, do not mix different types of engine oil. Husqvarna Motorcycles recommends changing the engine oil.

- Mount and tighten filler plug 1 together with the O-ring.

Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.
- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.

- Start the engine and check for leaks.
18 SERVICE WORK ON THE ENGINE

Finishing work
– Check the engine oil level. (p. 223)
19.1 Cleaning the motorcycle

Note

Material damage Components become damaged or destroyed if a pressure cleaner is used incorrectly. The high pressure forces water into the electrical components, connectors, throttle cables, and bearings, etc. Pressure which is too high causes malfunctions and destroys components.

- Do not direct the water jet directly on to electrical components, connectors, throttle cables or bearings.
- Maintain a minimum distance between the nozzle of the pressure cleaner and the component.

  Minimum clearance 60 cm (23.6 in)

Note

Environmental hazard Hazardous substances cause environmental damage.

- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

Info

To maintain the value and appearance of the motorcycle over a long period, clean it regularly. Avoid direct sunshine when cleaning the motorcycle.
– Close off exhaust system to keep water from entering.
– Remove loose dirt first with a soft jet of water.
– Spray the heavily soiled parts with a normal commercial motorcycle cleaner and clean using a brush.

**Motorcycle cleaner (\(\text{p. 272}\))**

---

**Info**

Use warm water containing normal motorcycle cleaner and a soft sponge. Never apply motorcycle cleaner to a dry vehicle; always rinse the vehicle with water first. If the vehicle was operated in road salt, clean it with cold water. Warm water would enhance the corrosive effects of salt.

---

– After rinsing the motorcycle with a gentle spray of water, allow it to dry thoroughly.
– Remove the closure of the exhaust system.
Warning

**Danger of accidents**  Moisture and dirt impair the brake system.
- Brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.

- After cleaning, ride the vehicle a short distance until the engine warms up.

Info

The heat produced causes water at inaccessible locations in the engine and on the brake system to evaporate.

- Push back the protection caps of the handlebar controls to allow any water that has penetrated to evaporate.
- After the motorcycle has cooled down, lubricate all moving parts and pivot points.
- Clean the chain. (p. 123)
- Treat bare metal (except for brake discs and the exhaust system) with a corrosion inhibitor.

Preserving materials for paints, metal and rubber (p. 272)
19 CLEANING, CARE

- Treat all painted parts with a mild paint care product.

Perfect finish and high gloss polish for paints (p. 272)

Info
Do not polish parts that were matte when delivered as this would strongly impair the material quality.

- Treat all plastic parts and powder-coated parts with a mild cleaning and care product.

Special cleaner for glossy and matte paint finishes, metal and plastic surfaces (p. 273)

- Lubricate the ignition/steering lock.

Universal oil spray (p. 273)

19.2 Checks and maintenance steps for winter operation

Info
If you use the motorcycle in winter, salt can be expected on the roads. You should therefore take precautions against aggressive road salt. After riding on salted roads, thoroughly clean the vehicle with cold water and dry it well. Warm water enhances the corrosive effects of salt.
– Clean the motorcycle. (p. 235)
– Clean the brake system.

**Info**

After **EVERY** trip on salted roads, thoroughly clean the brake calipers and brake linings, after they have cooled down and without removing them, with cold water and dry them carefully. After riding on salted roads, thoroughly clean the motorcycle with cold water and dry it well.

– Treat the engine, the swingarm, and all other bare or zinc-plated parts (except the brake discs) with a wax-based corrosion inhibitor.

**Info**

Corrosion inhibitor must not come in contact with the brake discs as this would greatly reduce the braking force.

– Clean the chain. (p. 123)
20 STORAGE

20.1 Storage

Warning

Danger of poisoning  Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

Info

If you plan to garage the motorcycle for a longer period, perform the following steps or have them performed.
Before storing the motorcycle, check all parts for function and wear. If service, repairs, or replacements are necessary, you should do this during the storage period (less workshop overload). In this way, you can avoid long workshop waiting times at the start of the new season.
When refueling for the last time before taking the motorcycle out of service, add fuel additive.

**Info**
The fuel additive stabilities the fuel for longer storage and makes starting easier next time.

- Refuel. (p. 86)
- Clean the motorcycle. (p. 235)
- Change the engine oil and the oil filter, clean the oil screens. (p. 224)
- Check the antifreeze and coolant level. (p. 205)
- Check tire pressure. (p. 173)
- Remove the 12-V battery. (p. 177)
- Charge the 12-V battery. (p. 182)

**Guideline**

| Storage temperature of the 12-V battery without direct sunlight | 0 … 35 °C (32 … 95 °F) |

- Store the vehicle in a dry location that is not subject to large fluctuations in temperature.
Husqvarna Motorcycles recommends raising the motorcycle.

- Raise the motorcycle with the rear lifting gear. (p. 106)
- Lift the motorcycle with the front lifting gear. (p. 108)
- Cover the vehicle with a tarp or similar cover that is permeable to air.

Info

Do not use non-porous materials since they prevent humidity from escaping, thus causing corrosion. Avoid running the engine for a short time only. Since the engine cannot warm up properly, the water vapor produced during combustion condenses and causes valves and the exhaust system to rust.
20.2 Preparing for use after storage

- Take the motorcycle off the front lifting gear. (\(\text{p. 109}\))
- Remove the rear of the motorcycle from the wheel stand. (\(\text{p. 107}\))
- Install the 12-V battery. (\(\text{p. 180}\))
- Set the clock. (\(\text{p. 59}\))
- Perform checks and maintenance measures when preparing for use. (\(\text{p. 71}\))
- Take a test ride.

## 22.3 Capacities

### 22.3.1 Engine oil

| Engine oil | 1.70 l (1.8 qt.) | Engine oil (SAE 10W/50) (p. 270) |

### 22.3.2 Coolant

| Coolant | 1.20 l (1.27 qt.) | Coolant (p. 269) |

### 22.3.3 Fuel

Fuel tank capacity, approx. 12.4 l (3.28 US gal) 
Super unleaded (ROZ 95) (p. 271)

Fuel reserve, approx. 1.8 l (1.9 qt.)

Brake fluid DOT 4 / DOT 5.1

Standard/classification
- DOT

Guideline
- Use only brake fluid that complies with the specified standard (see specifications on the container) and that exhibits the corresponding properties.

Recommended supplier
Castrol
- REACT PERFORMANCE DOT 4

MOTOREX®
- Brake Fluid DOT 5.1

Coolant

Guideline
- Only use high-grade, silicate-free coolant with corrosion inhibitor additive for aluminum motors. Low grade and unsuitable antifreeze causes corrosion, deposits and frothing.
- Do not use pure water as only coolant is able to meet the requirements needed in terms of corrosion protection and lubrication properties.
- Only use coolant that complies with the requirements stated (see specifications on the container) and that has the relevant properties.

Antifreeze protection to at least | -25 °C (-13 °F)
The mixture ratio must be adjusted to the necessary antifreeze protection. Use distilled water if the coolant needs to be diluted.

The use of premixed coolant is recommended.

Observe the coolant manufacturer specifications for antifreeze protection, dilution and miscibility (compatibility) with other coolants.

**Recommended supplier**

**MOTOREX®**
- COOLANT M3.0

**Engine oil (SAE 10W/50)**

**Standard/classification**
- JASO T903 MA2 (p. 274)
- SAE (p. 274) (SAE 10W/50)

**Guideline**
- Use only engine oils that comply with the specified standards (see specifications on the container) and that possess the corresponding properties.

**Fully synthetic engine oil**

**Recommended supplier**

**MOTOREX®**
- Power Synt 4T
Fork oil (SAE 4) (48601166S1)

**Standard/classification**
- SAE (p. 274) (SAE 4)

**Guideline**
- Use only oils that comply with the specified standards (see specifications on the container) and that exhibit the corresponding properties.

Shock absorber fluid (SAE 2.5) (50180751S1)

**Standard/classification**
- SAE (p. 274) (SAE 2.5)

**Guideline**
- Use only oils that comply with the specified standards (see specifications on the container) and that exhibit the corresponding properties.

Super unleaded (ROZ 95)

**Standard/classification**
- DIN EN 228 (ROZ 95)

**Guideline**
- Only use super unleaded fuel that matches or is equivalent to the specified standard.
- Fuel with an ethanol content of up to 10% (E10 fuel) is safe to use.

**Info**
Do not use fuel containing methanol (e.g., M15, M85, M100) or more than 10% ethanol (e.g., E15, E25, E85, E100).
### Chain cleaner

25 STANDARDS

**JASO T903 MA2**

Different technical development directions required a separate specification for motorcycles – the **JASO T903 MA2** standard.

Earlier, engine oils from the automobile industry were used for motorcycles because there was no separate motorcycle specification.

Whereas long service intervals are demanded for automobile engines, the focus for motorcycle engines is on high performance at high engine speeds.

In most motorcycle engines, the transmission and clutch are lubricated with the same oil.

The **JASO T903 MA2** standard meets these special requirements.

**SAE**

The SAE viscosity classes were defined by the Society of Automotive Engineers and are used for classifying oils according to their viscosity. The viscosity describes only one property of oil and says nothing about quality.

## 28.1 Red symbols

Red symbols indicate an error condition that requires immediate intervention.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Symbol]</td>
<td>The coolant temperature warning lamp lights up red – The coolant temperature has reached a critical value.</td>
</tr>
<tr>
<td>![Symbol]</td>
<td>The oil pressure warning lamp lights up red – The oil pressure is too low. Stop immediately, taking care not to endanger yourself or other road users in the process, and switch off the engine.</td>
</tr>
</tbody>
</table>

## 28.2 Yellow and orange symbols

Yellow and orange symbols indicate an error condition that requires prompt intervention. Active driving aids are also represented by yellow or orange symbols.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Symbol]</td>
<td>ABS warning lamp lights up/flashes yellow – ABS is not active. The ABS warning lamp also lights up if an error is detected.</td>
</tr>
<tr>
<td>![Symbol]</td>
<td>Fuel level warning lamp lights up orange – The fuel level has reached the reserve mark.</td>
</tr>
<tr>
<td>![Symbol]</td>
<td>Malfunction indicator lamp lights up/flashes orange – The OBD has detected an error in the vehicle electronics. Come safely to a halt, and contact an authorized Husqvarna Motorcycles workshop.</td>
</tr>
</tbody>
</table>
28.3 Green and blue symbols

Green and blue symbols reflect information.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Light Symbol]</td>
<td>The high beam indicator lamp lights up blue – The high beam is switched on.</td>
</tr>
<tr>
<td>![Neutral Symbol]</td>
<td>The idle indicator lamp lights up green – The transmission is in neutral.</td>
</tr>
<tr>
<td>![Click Symbol]</td>
<td>Turn signal indicator lamp flashes green – The turn signal is switched on.</td>
</tr>
