DEAR KTM CUSTOMER

Congratulations on your decision to purchase a KTM motorcycle. You are now the owner of a state-of-the-art sports vehicle that will continue to give you and your child pleasure for a long time if you maintain it properly.

We hope your child has many safe and enjoyable rides!

Enter the serial numbers of your vehicle below.

Read through this Owner's Manual carefully, always exercise caution when using the vehicle, and contact an authorized KTM workshop if you have any questions. This Owner's Manual serves as a technical instruction manual, explains important safety matters, and provides an overview of the main functions. This Owner's Manual is only intended for personal use. This Owner's Manual is not intended for commercial use.

The Owner's Manual contained the latest information for this model series at the time of publication. However, minor differences due to further developments in design cannot be ruled out completely.

All specifications contained herein are non-binding. KTM Sportmotorcycle GmbH specifically reserves the right to modify or delete technical specifications, prices, colors, forms, materials, services, designs, equipment, etc., without prior notice and without specifying reasons, to adapt these to local conditions, as well as to stop production of a particular model without prior notice. KTM accepts no liability for delivery options, deviations from figures and descriptions, misprints, and other errors. The models portrayed partly contain special equipment that does not belong to the regular scope of supply.

### TABLE OF CONTENTS

- **23** AUXILIARY SUBSTANCES ...................................... 99
- **24** STANDARDS .................................................. 100
- **25** INDEX OF SPECIAL TERMS .......................... 101
- **26** LIST OF ABBREVIATIONS......................... 102
- **27** LIST OF SYMBOLS........................................ 103
  - **27.1** Yellow and orange symbols.............. 103
- **INDEX** ............................................................. 105
1.1 Symbols used

The meaning of specific symbols is described below.

- Indicates an expected reaction (e.g., of a work step or a function).

- Indicates an unexpected reaction (e.g., of a work step or a function).

- All work marked with this symbol requires specialist knowledge and technical understanding. In the interest of the safety of your child, have these jobs performed in an authorized KTM workshop. Your motorcycle will be optimally cared for there by specially trained experts using the special tools required.

- Indicates a page reference (more information is provided on the specified page).

- Indicates information with more details or tips.

- Indicates the result of a testing step.

- Indicates the end of an activity, including potential reworking.

- Indicates a voltage measurement.

- Indicates a current measurement.

1.2 Formats used

The typographical formats used in this document are explained below.

- Proprietary name: Indicates a proprietary name.

- Name®: Indicates a protected name.

- Brand™: Indicates a brand available on the open market.

- Underlined terms: Refer to technical details of the vehicle or indicate technical terms, which are explained in the glossary.
2 SAFETY ADVICE

2.1 Use definition – intended use

This vehicle is designed and constructed to withstand the stresses and strains of regular racing if the maximum rider weight is not exceeded.

Info

Only operate this vehicle in closed-off areas remote from public road traffic.
Only use the lithium-ion battery while it is inside the vehicle.

2.2 Misuse

The vehicle must only be used as intended.
Dangers can arise for people, property and the environment through use not as intended.
Any use of the vehicle beyond the intended and defined use constitutes misuse.
Misuse also includes the use of operating and auxiliary fluids which do not meet the required specification for the respective use.

2.3 Notes/warnings

Pay close attention to the notes/warnings.

Info

Various information and warning labels are affixed to the vehicle. Do not remove information/warning labels. If they are missing, you or others may not recognize dangers and may therefore be injured.

2.4 Grades of risks

Warning

Identifies a danger that is likely to lead to fatal or serious injury if the appropriate measures are not taken.

Caution

Identifies a danger that may lead to minor injuries if the appropriate measures are not taken.

Note

Identifies a danger that will lead to considerable machine and material damage if the appropriate measures are not taken.

Warning

Identifies a danger that will lead to environmental damage if the appropriate measures are not taken.

2.5 Tampering warning

No mechanical, electrical or electronic modifications may be made to the vehicle, since safe operation cannot be guaranteed otherwise.
Examples of inadmissible manipulation and modifications:
1. Opening the rechargeable lithium-ion battery (Powerpack LV) or the motor.
2. Using the vehicle or the rechargeable lithium-ion battery when proper maintenance has not been performed.
3. Using the vehicle or the rechargeable lithium-ion battery outside of its defined use.
4. Using a damaged lithium-ion battery.

### 2.6 Safe operation

**Warning**

**Danger of accidents** A lack of physical and mental readiness on the part of the child poses a major risk. Children often underestimate or fail to recognize dangerous situations.

- Your child must already be able to ride a bicycle.
- Your child must be able to put the vehicle upright independently after a fall.
- Your child must understand that regulations and instructions from you or from other guardians must be followed.
- Make it clear to your child that he or she should not, under any circumstances, operate the vehicle without supervision.
- Make sure that the ride mode is appropriate for your child's riding ability and for the riding conditions.
  - If necessary, block the ride mode by removing the magnetic switch under the seat.
- Do not ask too much of your child.
  - Do not consider participation in competitive activities until your child's stamina, riding techniques and motivation are at the necessary levels.
- Only let your child ride on the vehicle if he or she is physically and mentally ready.

**Warning**

**Danger of burns** Some vehicle components become very hot when the vehicle is operated.

- Do not touch any parts such as the motor, lithium-ion battery, damper, or brake system before these vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

This vehicle is a low-voltage electric motorcycle. For this reason, follow the safety and care instructions that apply when using an electric motor.

If the throttle grip is closed and no recuperation (p. 26) is activated, the vehicle continues to roll without much delay. The vehicle speed decreases on account of rolling resistance and air resistance.

Because this vehicle does not have a manual transmission, there is no clutch. As with a conventional drive with a combustion engine, the operating temperature rises according to use and depending on the ambient temperature and the cleanliness of the cooling surfaces. If the temperature of the motor, the lithium-ion battery, or the electronics rises above the permissible operating temperature, the power of the vehicle will be reduced considerably. This protects the system against damage from overheating. When power reduction is imminent, the active driving mode indicator flashes. When power reduction is active, all three driving mode indicators light up. When all components have returned to their normal operating temperature, full system power is restored after restarting.

Only operate the vehicle when it is in perfect technical condition, in accordance with its intended use, and in a safe and environmentally compatible manner.

Have malfunctions that impair safety promptly eliminated by an authorized KTM workshop.

Adhere to the information and warning labels on the vehicle.
2.7 Fall or accident

If the vehicle is lying on its side, it switches from ready mode to standby mode after five seconds. To return the vehicle to ready mode, place the vehicle in the upright position and close the throttle grip beyond the basic position.

After a fall or accident, check the vehicle as usual when preparing for use.

2.8 Protective clothing

Warning
Risk of injury Missing or poor protective clothing presents an increased safety risk.
- Ensure your child wears appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
- Always use protective clothing for your child that is in good condition and meets the legal requirements.
- When you ride a motorcycle, set an example for your child and wear suitable protective clothing.

2.9 Work on vehicle, motor, and rechargeable lithium-ion battery

Warning
Risk of injury There is a risk of electric shock when working on live components.

Work on live components requires special training, qualifications, and tools.
- Have all work that is not described and explained performed by trained KTM mechanics only.
- Do not open the electric motor or the lithium-ion battery (Powerpack LV).

Warning
Risk of injury The vehicle runs very quietly, even when it is ready to operate.

The vehicle starts moving in an uncontrolled manner if the throttle grip is accidentally touched while work is being performed on the vehicle.
- Ensure that the vehicle is switched off with the On/Off button and remains switched off before starting any work on the vehicle.
- Remove the magnetic switch from the holder before starting any work on the vehicle.
- Protect the vehicle against access by unauthorized persons while you are performing work on the vehicle.

2.10 Environment

When you respect the rights of others and use your motorcycle legally, you will help protect the future of motorcycle sport and avoid most conflicts and problems.

When disposing of used oil, other operating and auxiliary fluids, and used components, comply with the applicable laws and regulations in your country.

When disposing of the lithium-ion battery (Powerpack LV), observe the relevant laws and guidelines of your country.

Your authorized KTM dealer can dispose of the Powerpack LV free of charge and in an environmentally compatible manner.

Because motorcycles are not subject to the EU regulations governing the disposal of used vehicles, there are no legal regulations that pertain to the disposal of an end-of-life motorcycle. Your authorized KTM dealer will be glad to assist you.

Electrical devices like the battery charger may not be disposed of with household waste. Electrical devices must be disposed of through the appropriate recycling centers. Contact your municipality or your authorized KTM dealer.
2.11 Owner’s Manual

It is important that you read this Owner’s Manual carefully and completely before your child makes his or her first trip. The Owner's Manual contains useful information and many tips for you and your child on how to operate, handle, and service your motorcycle. This is the only way for you to find out how to ideally tune the vehicle and how to protect your child from injury.

Tip
Store the Owner's Manual on your terminal device, for example, so that you can read it whenever you need to.

If you would like to know more about the vehicle or have questions on the material you read, please contact an authorized KTM dealer.

The Owner's Manual is an important component of the vehicle. If the vehicle is sold, the Owner's Manual must be downloaded again by the new owner.

The Owner's Manual can be downloaded several times using the QR code or the link on the delivery certificate.

The Owner's Manual is also available for download from your authorized KTM dealer and on the KTM website. A printed copy can also be ordered from your authorized KTM dealer.

International KTM Website: KTM.com

2.12 Fire hazard

Warning
Fire hazard Damaged rechargeable lithium-ion batteries present a fire hazard.

Massive mechanical damage may cause an internal cell short circuit and then cause the battery to self-ignite.

– Contact KTM customer service immediately if major damage to the rechargeable lithium-ion battery has occurred.

There is no particular fire hazard for this vehicle when the rechargeable lithium-ion battery (Powerpack LV) is intact.

However, should the vehicle catch fire, inform the fire department responsible that an electric vehicle with a rechargeable lithium-ion battery is on fire.
3.1 Manufacturer warranty, implied warranty

The work prescribed in the service schedule must only be carried out in an authorized KTM workshop and confirmed in the KTM Dealer.net, as otherwise all warranty claims will be void. Damage or secondary damage caused by tampering with and/or conversions on the vehicle are not covered by the manufacturer warranty.

3.2 Fuel, auxiliary substances

Use the operating and auxiliary substances (such as oils and lubricants) specified in the Owner’s Manual.

3.3 Spare parts, accessories

For the safety of your child, only use spare parts and accessory products that are approved and/or recommended by KTM and have them installed by an authorized KTM workshop. KTM accepts no liability for other products and any resulting damage or loss. Certain spare parts and accessory products are specified in parentheses in the descriptions. Your authorized KTM dealer will be glad to advise you.

The current KTM PowerParts for your vehicle can be found on the KTM website. International KTM Website: KTM.com

3.4 Service

A prerequisite for perfect operation and prevention of premature wear is that the service, care, and tuning work is properly carried out as described in the Owner’s Manual. An incorrect suspension setting can lead to damage and breakage of chassis components. Use of the vehicle under difficult conditions, such as on sand or on wet and muddy surfaces, can result in significantly increased wear of components, such as the drive train, brake system, or suspension components. For this reason, it may be necessary to inspect or replace parts before the next scheduled service. It is imperative that you adhere to the stipulated service intervals. If you observe these exactly, you will ensure a much longer service life for your motorcycle. The relevant mileage or time interval is whichever occurs first.

3.5 Figures

The figures contained in the manual may depict special equipment. In the interest of clarity, some components may be shown disassembled or may not be shown at all. It is not always necessary to disassemble the component to perform the activity in question. Please follow the instructions in the text.

3.6 Customer service

Your authorized KTM dealer will be happy to answer any questions you may have on your vehicle and KTM. A list of authorized KTM dealers can be found on the KTM website. International KTM Website: KTM.com
3.7 Power supply

A rechargeable lithium-ion battery 1 (Powerpack LV) is installed in the vehicle. The Powerpack LV supplies electric motor 2 and multifunctional element 3 with voltage. The Powerpack LV is firmly bolted to the frame and motor.

3.8 Operation at low temperatures

In order to protect the Powerpack LV, the motor control reduces the power at low component temperatures. If the temperature of the Powerpack LV is too low, the active ride mode indicator flashes. The vehicle can continue to be operated. The Powerpack LV is not damaged by the power reduction. The Powerpack LV heats up when the vehicle is in operation. When the temperature of the Powerpack LV exceeds a threshold value, full vehicle power is restored after the vehicle is restarted.
4.1 View of vehicle, front left (example)

1 Magnetic switch on handlebar (p. 16)
2 Quick release of seat
3 Plug-in stand holder
4 Charging socket
4.2 View of vehicle, rear right (example)

1. Quick release of seat
2. Multifunctional element (p. 19)
3. Magnetic switch on handlebar (p. 16)
4. Throttle grip (p. 16)
5. Hand brake lever (p. 16)
6. Vehicle identification number (p. 14)
7. On/Off button (p. 16)
8. Foot brake lever (p. 17)
9. Level viewer for brake fluid, rear
5.1 Vehicle identification number

The vehicle identification number ① is stamped on the right side of the steering head.

5.2 Type label

The type label ① is located on the front frame tube.

5.3 Motor number

The motor number ① is located on the right side of the motor below the Powerpack LV.

5.4 Fork part number

The fork part number ① is stamped on the outside of the axle clamp.
5.5 Shock absorber article number

The shock absorber article number is stamped on the bottom of the shock absorber toward the right-hand side.

5.6 Battery identification number

The battery identification number (BIN) is located on a sticker on the Powerpack LV.
6.1 **Hand brake lever**

Hand brake lever 1 is fitted on the right side of the handlebar. The hand brake lever is used to activate the front brake.

6.2 **Throttle grip**

The throttle grip 1 is fitted on the right side of the handlebar. After activation, the vehicle initially does not react to the throttle grip to prevent accidental acceleration. The throttle grip must be closed beyond the basic position to activate the throttle response. Only then does the vehicle switch to ready mode.

6.3 **On/Off button**

The On/Off button 1 is located on the right side of the Powerpack LV.

**Possible states**
- Vehicle switched off – In this operating state, the vehicle is deactivated.
- Vehicle in standby mode – In this operating state, the vehicle is activated.

6.4 **Magnetic switch on handlebar**

The holder for the red magnetic switch 1 is located on the left side of the handlebar.

**Possible states**
- Magnetic switch ☒ mounted on handlebar – When the magnetic switch is mounted on the handlebar, the vehicle can be activated and ridden.
- Magnetic switch ☒ removed from handlebar – When the magnetic switch is removed from the handlebar, the vehicle cannot be activated or ridden.
Warning
Risk of injury If the magnetic switch remains in the holder during a fall, the vehicle is not immediately deactivated.
– Make sure that the loop of the magnetic switch is securely attached to the user’s protective clothing or wrist so that the magnetic switch is disconnected from the holder in the event of a fall.

If the red magnetic switch on the handlebar is disconnected from the holder, e.g., in the event of a fall, the vehicle is deactivated. By removing the red magnetic switch from the handlebar, the vehicle can be quickly deactivated in any operating state. The red magnetic switch on the handlebar cannot be replaced with the gray magnetic switch under the seat (p. 17).

### 6.5 Magnetic switch under the seat

The holder for the gray magnetic switch 1 is located under the seat. By removing the gray magnetic switch under the seat, you can prevent the riding mode from being changed. Locking the ride mode is recommended if you have not yet gained sufficient experience for higher ride modes with more power and torque.

**Possible states**
- Magnetic switch  mounted under the seat – When the magnetic switch is mounted under the seat, the ride mode can be changed.
- Magnetic switch  removed – When the magnetic switch under the seat is removed, the ride mode cannot be changed.

The gray magnetic switch under the seat cannot be replaced with the red magnetic switch on the handlebar (p. 16).

### 6.6 Foot brake lever

Foot brake lever 1 is located in front of the right footrest. The rear brake is engaged with the foot brake lever.
6.7 Plug-in stand

The fixture for plug-in stand ı is located on the frame on the left side of the vehicle. The plug-in stand is used to park the motorcycle.

**Info**
Remove the plug-in stand before riding.

6.8 Diagnostics connector

Diagnostics connector ı is located under the seat.
7.1 Multifunctional element

The multifunctional element is mounted in front of the seat.

Overview of multifunctional element

1. Ride mode button (p. 19)
2. Ride mode display (p. 20)
3. Malfunction indicator lamp (p. 20)
4. Charging level indicator (p. 20)

7.2 Ride mode button

The ride mode button 1 determines the ride mode (p. 20). The ride mode button is only active if the magnetic switch under the seat is mounted.

Possible states

- The vehicle is in standby mode – The ride mode button is active.
- The vehicle is in ready mode – The ride mode button is active.
- All other vehicle conditions – The ride mode button is not active.
7.3 Ride mode display

Red ride mode displays with the numbers 1, 2, or 3 show the ride mode selected. Six ride modes are available. The ride modes define how the vehicle will respond to operation of the throttle grip. The lowest torque is available in ride mode 1. The maximum speed of the vehicle is limited. This ride mode is suitable for familiarization.

In ride modes 5 and 6, the full torque is available. The maximum speed of the vehicle can be utilized. These ride modes should only be selected once sufficient riding experience has been gained and the vehicle can be handled safely.

The ride modes between 1 and 5 represent intermediate stages in terms of torque and maximum speed. In ride modes 3 and 6, an additional recuperation function (p. 26) is available.

Ride modes 1 to 3 are indicated by the illuminated single digit. When ride modes 4, 5, and 6 are activated, the activated ride mode is displayed as the sum of the illuminated digits.

Info

When the magnetic switch under the seat (p. 17) is not mounted, the ride mode cannot be changed. The ride modes are switched through in ascending order; after ride mode 6, the ride mode jumps back to 1.

7.4 Malfunction indicator lamp

The warning tones emitted by the multifunctional element are synchronized with the flashing rhythm of malfunction indicator lamp 1.

Possible states

- The malfunction indicator lamp flashes – There is a malfunction in the vehicle electronic system.
- The malfunction indicator lamp lights up – The system is carrying out a self-check or has been disabled during driving.

7.5 Charging level indicator

All segments 1 light up: charging level 70% - 100%.
Four segments 2 light up: charging level 50% - 70%.
Two segments 3 light up: charging level 30% - 50%.
The last segment \(4\) lights up in yellow: charging level 20% - 30%.
The last segment \(4\) lights up in red and the driving mode indicator flashes red: charging level 10%–20%.
The last segment \(4\) and the driving mode indicator light up in red: charging level 0%–10%.

### 7.6 Power reduction

If the charging level (p. 20) of the Powerpack LV is too low or the system temperature is outside of the permissible range, the power is automatically reduced. The selected ride mode and the malfunction indicator lamp flash when the power has been reduced.

**Info**
The blink code of malfunction indicator lamp \(1\) can be used to determine the reason for the power reduction (see Troubleshooting chapter).
8.1 Advice on preparing for first use

**Warning**

**Danger of accidents**  
A lack of physical and mental readiness on the part of the child poses a major risk. Children often underestimate or fail to recognize dangerous situations.

- Your child must already be able to ride a bicycle.
- Your child must be able to put the vehicle upright independently after a fall.
- Your child must understand that regulations and instructions from you or from other guardians must be followed.
- Make it clear to your child that he or she should not, under any circumstances, operate the vehicle without supervision.
- Make sure that the ride mode is appropriate for your child's riding ability and for the riding conditions.
  - If necessary, block the ride mode by removing the magnetic switch under the seat.
- Do not ask too much of your child.
  - Do not consider participation in competitive activities until your child's stamina, riding techniques and motivation are at the necessary levels.
- Only let your child ride on the vehicle if he or she is physically and mentally ready.

**Warning**

**Risk of injury**  
Missing or poor protective clothing presents an increased safety risk.

- Ensure your child wears appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
- Always use protective clothing for your child that is in good condition and meets the legal requirements.
- When you ride a motorcycle, set an example for your child and wear suitable protective clothing.

**Warning**

**Danger of crashing**  
Different tire tread patterns on the front and rear wheel impair the handling characteristic.

- Different tire tread patterns can make the vehicle significantly more difficult to control.
- Make sure that only tires with a similar tire tread pattern are fitted to the front and rear wheel.

**Warning**

**Danger of accidents**  
The vehicle is not designed to carry passengers.

- Make it clear to your child that he or she must not carry a passenger.

**Warning**

**Danger of accidents**  
The brake system fails in the event of overheating.

- If the foot brake lever is not released, the brake linings drag continuously.
- Ensure that your child raises his or her foot from the foot brake lever if he or she does not want to brake.

**Warning**

**Danger of accidents**  
The suspension components will become damaged or destroyed if overloaded.

- Do not exceed the maximum permissible weight of the rider.
**Warning**  
**Risk of misappropriation**  People who act without authorization endanger themselves and others.  
– Never leave the vehicle unattended.  
– Protect the vehicle against access by unauthorized persons.

– Ensure that the pre-sales inspection work has been carried out by an authorized KTM workshop.  
  ✔️ You will receive a delivery certificate when the vehicle is handed over.  
– Read through the entire Owner's Manual together with your child before riding for the first time.

**Info**  
Pay special attention to the safety instructions and to the risk of injury. Explain to your child the techniques of riding and falling, e.g., how shifting weight can influence handling characteristics.

– Familiarize your child with the controls.  
– Adjust the basic position of the hand brake lever. (p. 62)  
– Adjust the basic position of the foot brake lever. (p. 70)  
– Before using the vehicle for the first time, ensure that the basic settings of the chassis are suitable for the weight of your child.  
– Allow your child to become accustomed to the handling of the motorcycle on suitable terrain, preferably on a large, open meadow.

**Info**  
To give your child a feeling for the brake system, start by pushing your child. Do not start the motor until your child is able to apply the necessary front brake pressure. Your child should begin by riding to another person, who can help your child stop and turn.

– Erect obstacles for your child to navigate around so that your child becomes accustomed to handling the vehicle.  
– Your child should also try to ride as slowly as possible and in a standing position to get a better feeling for the motorcycle.  
– Your child should not ride on terrain that exceeds your child's capabilities and experience.  
– Your child should hold the handlebar firmly with both hands and keep his or her feet on the footrests when riding.  
– Make sure the maximum permissible weight of the rider is not exceeded.  

**Guideline**  

<table>
<thead>
<tr>
<th>Maximum rider weight</th>
<th>45 kg (99 lb.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum rider size</td>
<td>&lt; 130 cm (&lt; 51.2 in)</td>
</tr>
</tbody>
</table>

– Check the spoke tension. (p. 80)

**Info**  
The spoke tension must be checked after half an hour of operation.
9.1 Checks and maintenance measures when preparing for use

Before every trip, check the condition of the vehicle and ensure that it is safe to operate. The vehicle must be in perfect technical condition when it is being operated.

- Check the throttle grip, both magnetic switches, Powerpack LV, multifunctional element, and electric motor for external damage.
- Check the front brake fluid level. (p. 64)
- Check the rear brake fluid level. (p. 71)
- Check the front brake linings. (p. 66)
- Check the brake linings of the rear brake. (p. 72)
- Check that the brake system is functioning properly.
- Check the chain for dirt. (p. 55)
- Check the chain, rear sprocket, motor sprocket, and chain guide. (p. 58)
- Check the chain tension. (p. 56)
- Check the tire condition. (p. 79)
- Check tire pressure. (p. 80)
- Check the spoke tension. (p. 80)

Info
The spoke tension must be checked regularly as incorrect spoke tension will strongly impair riding safety.

- Clean the dust boots of the fork legs. (p. 46)
- Bleed the fork legs. (p. 45)
- Check the settings of all controls and ensure that they can be operated smoothly.
- Check the tightness of the easily accessible, safety-relevant screws and nuts.
- Check the charging level of the Powerpack LV.

9.2 Starting the vehicle

- Remove plug-in stand 1.
- Press and hold the On/Off button until the multifunctional element lights up.
  ✔️ The vehicle is in standby mode.
Optional:
- Press ride mode button 2 to change the ride mode.

- Select one of the ride modes (p. 20).
- Close the throttle grip beyond the basic position.
  ✔ The vehicle emits a beep, is ready to ride, and reacts to the throttle grip.

9.3 Starting off

Info
The plug-in stand must be removed before riding.

- Open the throttle carefully.

9.4 Applying the brakes

Warning
Danger of accidents Excessively forceful application of the brakes blocks the wheels.
- Explain to your child that he or she must adapt the braking to the traffic situation and the road conditions.

Warning
Danger of accidents A spongy pressure point on the front or rear brake reduces braking efficiency.
- Check the brake system and do not allow your child to continue riding until the problem is eliminated.
  (Your authorized KTM workshop will be glad to help.)
Warning
**Danger of accidents** Moisture and dirt impair the brake system.
- Explain to your child that he or she must brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.
- On sandy, wet, or slippery surfaces, use the rear brake.
- Always finish braking before you go into a bend.

### 9.5 Recuperation

The Powerpack LV is charged by the electric motor in ride mode 3 and 6 (**p. 20**) when the throttle grip is closed beyond the basic position in overrun. The recuperation function results in an increased motor braking effect. The recuperation effect is stronger in ride mode 6 than in ride mode 3.

**Info**
The recuperation function is not available in the remaining ride modes.

### 9.6 Stop, park

**Warning**
**Risk of misappropriation** People who act without authorization endanger themselves and others.
- Never leave the vehicle unattended.
- Protect the vehicle against access by unauthorized persons.

**Warning**
**Danger of burns** Some vehicle components become very hot when the vehicle is operated.
- Do not touch any parts such as the motor, lithium-ion battery, damper, or brake system before these vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

**Note**
**Material damage** The vehicle may be damaged by incorrect procedure when parking.
Significant damage may be caused if the vehicle rolls away or falls over.
The components for parking the vehicle are designed only for the weight of the vehicle.
- Park the vehicle on a firm and level surface.
- Ensure that nobody sits on the vehicle when the vehicle is parked on a stand.

- Apply the brakes on the motorcycle.
- Press and hold the On/Off button until the multifunctional element goes out.
- Remove the magnetic switch from the holder on the handlebar.
- Park the motorcycle on firm ground.
9.7 Transporting

Note
**Danger of damage**  The parked vehicle can roll away or fall over.
  – Park the vehicle on a firm and level surface.

Note
**Fire hazard**  Hot vehicle components pose a fire hazard and explosion risk.
  – Do not park the vehicle near to materials which are highly flammable or explosive.
  – Allow the vehicle to cool down before covering it.

– Press and hold the On/Off button until the multifunctional element goes out.
– Remove the magnetic switch  from the holder on the handlebar.
– Use tension belts or other suitable devices to secure the motorcycle against falling over or rolling away.
10 SERVICE SCHEDULE

10.1 Additional information

Any further work that results from the compulsory work or from the recommended work must be ordered separately and invoiced separately.

Different service intervals may apply in your country, depending on the local operating conditions. Individual service intervals and scopes may change in the course of technical developments. The most up-to-date service schedule can always be found on KTM Dealer.net. Your authorized KTM dealer will be happy to advise you.

Always bring the battery charger with you when having the vehicle serviced.
The use of a service hour counter is recommended in order to be able to check the mileage at any time.
Service hour counter (45412920000)

</table>

- ○ One-time interval
- ● Periodic interval
11.1 Checking the basic chassis setting with the rider’s weight

- For optimal motorcycle riding characteristics and to avoid damage to forks, shock absorbers, link fork and frame, the basic settings of the suspension components must match the rider's weight.
- This vehicle is delivered pre-set for a standard rider's weight (with full protective clothing).

Guideline

| Standard rider weight | 25 ... 35 kg (55 ... 77 lb.) |

- If the rider’s weight is above or below this range, the basic setting of the suspension components must be adjusted accordingly.
- Small weight differences can be compensated by adjusting the spring preload and the fork air pressure, but in the case of larger weight differences, the springs must be replaced.

11.2 Air suspension XACT 5235

Air suspension WP Suspension XACT 5235 is used in the fork. In this system, suspension is located in the left fork leg and damping in the right fork leg. A significant weight advantage is achieved compared with conventional forks. The response on slightly uneven surfaces is significantly improved.

In normal driving mode, suspension is provided exclusively by an air cushion. A steel spring is located in the left fork leg as an end stop.

Info

If the fork is frequently overloaded, then the air pressure in the fork must be increased to avoid damage to the fork and frame.

The air pressure in the fork can be quickly adjusted to the rider's weight, surface conditions and the rider's preference using a fork airpump. The fork does not have to be dismantled. The time consuming mounting of harder or softer fork springs is not required.

If the air chamber loses air due to a damaged seal, the fork will still not sag. In this case the air is retained in the fork. The suspension travel is maintained as far as possible. The damping becomes harder and the riding comfort reduces.

The rebound damping can be adjusted.

The rebound adjustment is located at the upper end of the right fork leg.
11.3 Compression damping of the shock absorber

The compression damping of the shock absorber is divided into two ranges: high-speed and low-speed. High-speed and low-speed refer to the compression speed of the rear wheel suspension and not to the vehicle speed.

The high-speed compression adjuster has an effect, for example, when landing after a jump: the rear wheel suspension compresses quickly.

The low-speed compression adjuster has an effect, for example, when riding over long ground swells: the rear wheel suspension compresses slowly.

These two ranges can be adjusted separately, although the transition between high-speed and low-speed is gradual. Thus, modifications in the high-speed range affect the compression damping in the low-speed range and vice versa.

11.4 Adjusting the low-speed compression damping of the shock absorber

Caution
Risk of injury  Parts of the shock absorber will move around if the shock absorber is detached incorrectly.

The shock absorber is filled with highly compressed nitrogen.

– Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

Info
The effect of the low-speed compression adjuster can be seen in slow to normal compression of the shock absorber.

- Turn adjusting screw 1 clockwise with a screwdriver as far as the last perceptible click.

Info
Do not loosen fitting 2!

- Turn counterclockwise by the number of clicks corresponding to the shock absorber type.

Guideline

<table>
<thead>
<tr>
<th>Low-speed compression damping</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Comfort</td>
<td>18 clicks</td>
</tr>
<tr>
<td>Standard</td>
<td>15 clicks</td>
</tr>
<tr>
<td>Sport</td>
<td>12 clicks</td>
</tr>
</tbody>
</table>

Info
Turn clockwise to increase damping; turn counterclockwise to reduce damping.
11.5 Adjusting the high-speed compression damping of the shock absorber

**Caution**

*Risk of injury* Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.

– Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

**Info**
The effect of the high-speed compression adjuster can be seen in fast compression of the shock absorber.

– Push the splash protector to the side.
– Using an open end wrench, turn adjusting screw 1 clockwise all the way.

**Info**
Do not loosen fitting 2!

– Turn counterclockwise by the number of turns corresponding to the shock absorber type.

**Guideline**

<table>
<thead>
<tr>
<th>High-speed compression damping</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comfort</td>
</tr>
<tr>
<td>Standard</td>
</tr>
<tr>
<td>Sport</td>
</tr>
</tbody>
</table>

**Info**
Turn clockwise to increase damping; turn counterclockwise to reduce damping.

– Position the splash protector.

11.6 Adjusting the rebound damping of the shock absorber

**Caution**

*Risk of injury* Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.

– Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

– Turn adjusting screw 1 clockwise up to the last perceptible click.
– Turn counterclockwise by the number of clicks corresponding to the shock absorber type.

**Guideline**

<table>
<thead>
<tr>
<th>Rebound damping</th>
</tr>
</thead>
<tbody>

</tbody>
</table>
11.7 Measuring the dimension of the rear wheel unloaded

Preparatory work
- Raise the motorcycle with a lift stand. (p. 45)

Main work
- Measure the vertical distance between the rear axle and a fixed point, such as a marking on the side cover.
- Note the value as dimension \( A \).

Finishing work
- Remove the motorcycle from the lift stand. (p. 45)

11.8 Checking the static sag of the shock absorber

- Measure dimension \( A \) of rear wheel unloaded. (p. 33)
- Hold the motorcycle upright with aid of an assistant.
- Measure the distance between rear axle and fixed point again.
- Note the value as dimension \( B \).

Info
The static sag is the difference between measurements \( A \) and \( B \).

- Check the static sag.

<table>
<thead>
<tr>
<th>Static sag</th>
<th>12 mm (0.47 in)</th>
</tr>
</thead>
</table>

» If the static sag is less or more than the specified value:
- Adjust the spring preload of the shock absorber. (p. 34)
11.9 Checking the riding sag of the shock absorber

- Measure dimension \( A \) of rear wheel unloaded. (p. 33)
- With another person holding the motorcycle, the rider, wearing full protective clothing, sits on the seat in a normal sitting position (feet on footrests) and bounces up and down a few times.
  - The rear wheel suspension levels out.
- Another person now measures the distance between the rear axle and the fixed point.
- Note the value as dimension \( C \).

**Info**
The riding sag is the difference between measurements \( A \) and \( C \).

- Check riding sag.

| Riding sag | 80 mm (3.15 in) |

> If the riding sag differs from the specified measurement:
  - Adjust the riding sag. (p. 35)

11.10 Adjusting the spring preload of the shock absorber

**Caution**

Risk of injury  Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.
- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

**Preparatory work**
- Raise the motorcycle with a lift stand. (p. 45)
- Remove the shock absorber. (p. 54)
- After removing the shock absorber, clean it thoroughly.

**Main work**
- Measure the full spring length while it is under tension and note down the value.
- Loosen retaining ring \( 1 \).
- Turn adjusting ring \( 2 \) until the spring is no longer under tension.

| Hook wrench (T304) |
| Hook wrench (T1533) |

**Info**

If the spring cannot be fully released, the spring must be removed to accurately measure the spring length.

- Measure the total spring length while the spring is not under tension.
- Tighten the spring to the specified measurement by turning adjusting ring \( 2 \).
Guideline

| Spring preload | 3 mm (0.12 in) |

**Info**
The spring preload is the difference between the relaxed spring length and the tensioned spring length. Depending on the static sag and/or the riding sag, it may be necessary to increase or decrease the spring preload.

- Tighten retaining ring 1.

**Finishing work**
- Install the shock absorber. (p. 54)
- Remove the motorcycle from the lift stand. (p. 45)

### 11.11 Adjusting the riding sag

#### Preparatory work
- Raise the motorcycle with a lift stand. (p. 45)
- Remove the shock absorber. (p. 54)
- After removing the shock absorber, clean it thoroughly.

#### Main work
- Choose and mount a suitable spring.

**Guideline**

<table>
<thead>
<tr>
<th>Spring rate</th>
<th>Weight of rider: 15 ... 25 kg (33 ... 55 lb.)</th>
<th>25 N/mm (143 lb/in)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Weight of rider (standard): 25 ... 35 kg (55 ... 77 lb.)</td>
<td>30 N/mm (171 lb/in)</td>
</tr>
<tr>
<td></td>
<td>Weight of rider: 35 ... 45 kg (77 ... 99 lb.)</td>
<td>35 N/mm (200 lb/in)</td>
</tr>
</tbody>
</table>

**Info**
The spring rate is shown on the outside of the spring. Smaller weight differences can be compensated by changing the spring preload.

**Finishing work**
- Install the shock absorber. (p. 54)
- Remove the motorcycle from the lift stand. (p. 45)
- Check the static sag of the shock absorber. (p. 33)
- Check the riding sag of the shock absorber. (p. 34)
- Adjust the rebound damping of the shock absorber. (p. 32)
11.12 Checking the basic setting of the fork

Info
For various reasons, no exact riding sag can be determined for the fork.

- Smaller differences in the rider's weight can be compensated for by the fork air pressure.
- However, if the fork frequently bottoms out (hard end stop on compression), the fork air pressure must be increased, within the specified values, to avoid damage to the fork and frame.

11.13 Adjusting the fork air pressure

Warning
Danger of accidents  Modifications to the suspension setting may seriously alter the handling characteristic.
Extreme modifications to the suspension setting may cause a serious deterioration in the handling characteristic and overload components.
- Only make adjustments within the recommended range.
- Make sure your child rides slowly to start with after making adjustments in order that he or she can assess the new handling characteristic.

Info
Check or adjust the air pressure 5 minutes, at the earliest, after the end of the ride and under the same conditions.
The air suspension is located in the left fork leg. The rebound damping is located in the right fork leg.

Preparatory work
- Raise the motorcycle with a lift stand. (p. 45)

Main work
- Remove protection cap 1.
- Push together fork airpump 2 fully.

Fork airpump (79412966100)

Info
The fork airpump is included as part of the motorcycle's accessory pack.

- Connect the fork airpump to the left fork leg.
  - The fork airpump indicator switches on automatically.
  - A little air escapes from the fork leg when connecting.
This is due to the volume of the hose and not due to a defect in the fork airpump or the fork. Read the accompanying instructions.

- Adjust the air pressure as specified.

<table>
<thead>
<tr>
<th>Guideline</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Air pressure</td>
<td>2 bar (29 psi)</td>
</tr>
<tr>
<td>Gradual changing of the air</td>
<td>0.2 bar (3 psi)</td>
</tr>
<tr>
<td>pressure in steps of</td>
<td></td>
</tr>
<tr>
<td>Minimum air pressure</td>
<td>1.4 bar (20 psi)</td>
</tr>
<tr>
<td>Maximum air pressure</td>
<td>4 bar (58 psi)</td>
</tr>
</tbody>
</table>

Info
Never adjust the air pressure to a value outside the stated range.

- Disconnect the fork airpump from the left fork leg.

✓ When disconnecting, excess pressure will escape from the hose – the fork leg itself does not lose any air.
✓ The fork airpump indicator switches off automatically after 80 seconds.
- Mount the protection cap.

Info
Only mount the protection cap by hand.

Finishing work
- Remove the motorcycle from the lift stand. (p. 45)

11.14 Adjusting the rebound damping of the fork

Info
The hydraulic rebound damping determines the fork suspension behavior.

- Turn adjuster 1 clockwise all the way.

Info
Adjuster 1 is located at the upper end of the right fork leg.
- Turn counterclockwise by the number of clicks corresponding to the fork type.

<table>
<thead>

11.15 Handlebar position

On the upper triple clamp, there are 2 holes at a distance of \( A \) to each other.

| Hole distance \( A \) | 15 mm (0.59 in) |

The holes on the handlebar support are placed at a distance of \( B \) from the center.

| Hole distance \( B \) | 3.5 mm (0.138 in) |

The handlebar holder can be mounted in four different positions. This allows the handlebar to be mounted in the most comfortable position for the rider.

11.16 Adjusting the handlebar position

**Warning**

**Danger of accidents** A repaired handlebar poses a safety risk.

If the handlebar is bent or straightened, the material becomes fatigued. The handlebar may break as a result.

— Change the handlebar if the handlebar is damaged or bent.

1. Remove screws 1. Take off the handlebar clamps. Remove the handlebar and lay it to one side.

2. Remove screws 2. Take off handlebar supports.

3. Place handlebar supports in required position. Mount and tighten screws 2.

**Guideline**

| Screw, handlebar support | M10 | 40 Nm (29.5 lbf ft) |

Mount the left and right handlebar supports in the same position.

— Position the handlebar.

**Info**

— Make sure the cables and wiring are positioned correctly.

— Position the handlebar clamps. Mount screws 1 and tighten evenly.
### Guideline

<table>
<thead>
<tr>
<th>Screw, handlebar clamp</th>
<th>M8</th>
<th>20 Nm (14.8 lbf ft)</th>
</tr>
</thead>
</table>

### Info

- Make sure the installed gaps are even.
12.1 Seat height adjustment options

This vehicle offers several options for adjusting the seat height to the rider's height. The seat height can be changed with the mounting position of the fork, shock absorber, and frame.

**Info**
When adjusting the seat height on the fork and shock absorber, make sure that the vehicle is as straight as possible after completion of the work. If the seat height on the shock absorber is set low, the fork should be pushed through further and vice versa.

12.2 Adjusting the seat height on the shock absorber

**Warning**
**Danger of accidents** Modifications to the suspension setting may seriously alter the handling characteristic.
- Make sure your child rides slowly to start with after making adjustments in order that he or she can assess the new handling characteristic.

**Info**
If the seat height is adjusted on the shock absorber, the seat height should also be adjusted on the fork.

**Preparatory work**
- Raise the motorcycle with a lift stand. (p. 45)

**Main work**
- Hold the rear wheel with the link fork and remove screw 1.
- Position the shock absorber according to the required seat height.
  
  **Guideline**
  | High seat position | A |
  | Low seat position | B |
- Mount and tighten screw 1.
  
  **Guideline**
  | Screw, top shock absorber | M10 | 45 Nm (33.2 lbf ft) |
  | **Loctite® 243™** |

**Finishing work**
- Remove the motorcycle from the lift stand. (p. 45)
12.3 Adjusting the seat height on the fork

**Warning**

**Danger of accidents** Modifications to the suspension setting may seriously alter the handling characteristic.

– Make sure your child rides slowly to start with after making adjustments in order that he or she can assess the new handling characteristic.

**Info**

The seat height can be infinitely adjusted by pushing the fork legs through. If the seat height is adjusted on the fork, the seat height should also be adjusted on the shock absorber.

- Raise the motorcycle with a lift stand. (p. 45)
- Remove the front wheel. (p. 76)

**Main work**

- Loosen screw 1.
- Loosen screw 2.
- Position the fork leg according to the required seat height.

**Guideline**

**Condition**

Seat position as low as possible, fork fully inserted

| Minimum distance A between the fork and handlebar | 3 mm (0.12 in) |

Condition

Seat position as high as possible, fork pulled out completely

| Bottom edge of screw cap B closes flush with the upper edge of the triple clamp |

Position the fork leg only within the described range.

- Tighten screw 2.

**Guideline**

| Screw, bottom triple clamp | M8 | 15 Nm (11.1 lbf ft) |

- Tighten screw 1.

**Guideline**

| Screw, top triple clamp | M8 | 20 Nm (14.8 lbf ft) |

- Repeat the procedure on the other fork leg.

**Guideline**

Position both fork legs equally.

**Finishing work**

- Install the front wheel. (p. 76)
### 12.4 Adjusting the seat height on the frame

#### Preparatory work
- Remove the seat. (p. 55)

#### Main work
- Remove screw 1 and the front fairing.
- Remove screws 2 with bushings and splash protector 3.
- Remove screws 4 with bushings and rear fairing 5.
- Remove screws 6 and position subframe 7 at the drill holes at the desired seat height.

**Guideline**
- Pay attention to the wiring harness.
- High seat position: Drill holes A
- Low seat position: Drill holes B
- Mount and tighten screws 6.

**Guideline**
- Position rear fairing 5, mount screws 4 with bushings, and tighten.
- Position splash protector 3, mount screws 2 with bushings, and tighten.
Guideline

<table>
<thead>
<tr>
<th>Component</th>
<th>Size</th>
<th>Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>Screw, splash protector</td>
<td>M6</td>
<td>8 Nm (5.9 lbf ft)</td>
</tr>
</tbody>
</table>

Condition

High seat position
- Make sure that thread adapter ⑧ is mounted and tightened.

Guideline

<table>
<thead>
<tr>
<th>Component</th>
<th>Size</th>
<th>Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>Threaded adapter for front fairing</td>
<td>M6</td>
<td>8 Nm (5.9 lbf ft)</td>
</tr>
</tbody>
</table>

Condition

Low seat position
- Make sure that the thread adapter is removed.

Info
- Retain the thread adapter for later assembly.

- Position the front fairing on holders ⑨.
  - The holding lugs of the front fairing engage in the recesses of the rear fairing on both sides.

- Mount and tighten screw ①.

Guideline

<table>
<thead>
<tr>
<th>Component</th>
<th>Size</th>
<th>Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>Remaining screws, chassis</td>
<td>M6</td>
<td>10 Nm (7.4 lbf ft)</td>
</tr>
</tbody>
</table>
Finishing work
- Mount the seat. (☞ p. 55)
13.1 Raising the motorcycle with a lift stand

**Note**

**Danger of damage**  The parked vehicle can roll away or fall over.
- Park the vehicle on a firm and level surface.

- Raise the motorcycle at the frame underneath the engine.
  
  **Lift stand (78929955100)**
  
  ✔ Neither wheel is in contact with the ground.
  - Secure the motorcycle against falling over.

13.2 Removing the motorcycle from the lift stand

**Note**

**Danger of damage**  The parked vehicle can roll away or fall over.
- Park the vehicle on a firm and level surface.

- Remove the motorcycle from the lift stand.
- Remove the lift stand.
- To park the motorcycle, insert plug-in stand 1 into the plug-in stand bracket on the left side of the vehicle.

**Info**

Remove the plug-in stand before riding.

13.3 Bleeding the fork legs

**Preparatory work**
- Raise the motorcycle with a lift stand. (p. 45)

**Main work**
- Release bleeder screws 1.
  ✔ Any excess pressure escapes from the interior of the fork.
- Tighten the bleeder screws.

**Finishing work**
- Remove the motorcycle from the lift stand. (p. 45)
13.4 Cleaning the dust boots of the fork legs

**Preparatory work**
- Raise the motorcycle with a lift stand. (p. 45)
- Remove the fork protector. (p. 46)

**Main work**
- Push dust boots 1 of both fork legs downward.

**Info**
The dust boots remove dust and coarse dirt particles from the inside fork tubes. Over time, dirt can accumulate behind the dust boots. If this dirt is not removed, the seals rings behind can start to leak.

**Warning**
**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.
- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

- Clean and oil the dust boots and inside fork tubes of both fork legs.

| Universal oil spray (p. 99) |

- Press the dust boots back into the installation position.
- Remove the excess oil.

**Finishing work**
- Install the fork protector. (p. 47)
- Remove the motorcycle from the lift stand. (p. 45)

13.5 Removing the fork protector

- Remove screws 1 and take off the clamp.
- Remove screws 2 on the left and right rear fork leg. Take off the fork protector.
13.6 Installing the fork protector

Position the fork protector on the left and right fork leg. Mount and tighten screws 1.

Guideline

| Remaining screws, chassis | M6 | 10 Nm (7.4 lbf ft) |

Position the brake line and the clamp. Mount and tighten screws 2.

Guideline

| Screw, brake line holder on fork protector | EJOT PT® K60x20-AL | 2 Nm (1.5 lbf ft) |

13.7 Removing the fork legs

Preparatory work

– Raise the motorcycle with a lift stand. (p. 45)
– Remove the front wheel. (p. 76)

Main work

– Remove screws 1 and take off the clamp.
– Remove screws 2 and take off the brake caliper.
– Allow the brake caliper and the brake line to hang loosely to the side.

Info

Do not kink the brake line.

– Note the installation position of the fork legs.
– Loosen screws 3. Remove the left fork leg.
– Loosen screws 4. Remove the right fork leg.

13.8 Installing the fork legs

Condition

Individual installation position

– Position the fork legs.

Guideline

Observe the position determined during removal.

✔ Bleeder screws 1 are positioned toward the rear.

Condition

Standard installation position

– Position the fork legs.
13 SERVICE WORK ON THE CHASSIS

13.9 Removing the lower triple clamp

Preparatory work
- Raise the motorcycle with a lift stand. (p. 45)
- Remove the front wheel. (p. 76)
- Remove the fork legs. (p. 47)
- Remove the start number plate. (p. 52)
- Remove front fender. (p. 53)

Main work
- Remove nut 1.
- Remove the cable tie on the magnetic switch cable from the handlebar.
- Release screw 2, take off the upper triple clamp with the handlebar and set aside.

Info
Cover the components to protect them against damage.
Do not kink the cables and lines.
- Remove protective ring 3.
- Remove the lower triple clamp with the steering stem.
- Remove the upper steering head bearing.

13.10 Installing the lower triple clamp

Main work
- Clean the bearing and sealing elements, check for damage, and grease.
  - High viscosity grease (p. 99)
- Insert the lower triple clamp with the steering stem. Mount upper steering head bearing 1.
- Check that the O-ring at the top 2 is correctly positioned.
- Push on protective ring 3.

- Position the upper triple clamp with the handlebar.
- Mount nut 4, but do not tighten it yet.
13 SERVICE WORK ON THE CHASSIS

**Condition**

Individual installation position
- Position the fork legs.

- **Position the brake line and the clamp. Mount and tighten screws** 11.  

---

50
Guideline

| Screw, brake line holder on fork protector | EJOT PT® K60x20-AL | 2 Nm (1.5 lbf ft) |

**Finishing work**
- Install front fender. (p. 53)
- Install the start number plate. (p. 53)
- Check that the cable and brake line are routed correctly.
- Install the front wheel. (p. 76)
- Check the steering head bearing play. (p. 51)
- Remove the motorcycle from the lift stand. (p. 45)

### 13.11 Checking the steering head bearing play

**Warning**

**Danger of accidents**
Incorrect steering head bearing play impairs the handling characteristic and damages components.
- Correct incorrect steering head bearing play immediately. (Your authorized KTM workshop will be glad to help.)

**Info**
If the vehicle is operated for a lengthy period with play in the steering head bearing, the bearings and the bearing seats in the frame can become damaged over time.

**Preparatory work**
- Raise the motorcycle with a lift stand. (p. 45)

**Main work**
- Move the handlebar to the straight-ahead position. Move the fork legs to and fro in the direction of travel.

**Play should not be detectable on the steering head bearing.**

- If there is detectable play:
  - Adjust the steering head bearing play. (p. 52)
  - Move the handlebar to and fro over the entire steering range.

**It must be possible to move the handlebar easily over the entire steering range. There should be no detectable detent positions.**

- If detent positions are detected:
  - Adjust the steering head bearing play. (p. 52)
  - Check the steering head bearing and replace if required.

**Finishing work**
- Remove the motorcycle from the lift stand. (p. 45)
13.12 Adjusting the steering head bearing play

**Preparatory work**
- Raise the motorcycle with a lift stand. (p. 45)

**Main work**
- Loosen screws ①.
- Loosen screw ②.
- Loosen and retighten nut ③.

**Guideline**

<table>
<thead>
<tr>
<th>Nut, steering head</th>
<th>M20x1.5</th>
<th>10 Nm (7.4 lbf ft)</th>
</tr>
</thead>
</table>

- Using a plastic hammer, tap lightly on the upper triple clamp to avoid stresses.
- Tighten screw ②.

**Guideline**

<table>
<thead>
<tr>
<th>Screw, top triple clamp</th>
<th>M8</th>
<th>20 Nm (14.8 lbf ft)</th>
</tr>
</thead>
</table>

**Finishing work**
- Check the steering head bearing play. (p. 51)
- Remove the motorcycle from the lift stand. (p. 45)

13.13 Lubricating the steering head bearing

- Remove the lower triple clamp. (p. 48)
- Install the lower triple clamp. (p. 49)

**Info**

The steering head bearing is cleaned and lubricated in the course of removal and installation of the lower triple clamp.

13.14 Removing the start number plate

- Remove screw ①.
- Unhook the start number plate from the brake line and remove it.
13.15 Installing the start number plate

- Attach the start number plate to the brake line.
- Position the start number plate.
  ✔ Holding lugs 1 engage in the fender.

- Mount and tighten screw 2.

Guideline

<table>
<thead>
<tr>
<th>Screw, start number plate</th>
<th>M6</th>
<th>4 Nm (3 lbf ft)</th>
</tr>
</thead>
</table>

13.16 Removing front fender

- Remove screws 1. Take off the front fender.

13.17 Installing front fender

- Position the fender with drill holes 1 in the holding lugs on the start number plate.
13.18 Removing the shock absorber

**Preparatory work**
- Raise the motorcycle with a lift stand. (p. 45)

**Main work**
- Note the installation position of the shock absorber.
- Pull brake line 1 out of the holder.
- Remove screw 2 and lower the link fork carefully.
- Remove screw 3, push splash protector 4 to the side, and remove the shock absorber.

13.19 Installing the shock absorber

**Warning**

**Danger of accidents** Modifications to the suspension setting may seriously alter the handling characteristic.
- Make sure your child rides slowly to start with after making adjustments in order that he or she can assess the new handling characteristic.

**Main work**
- Push splash protector 1 to the side.
- Mount the shock absorber with screw 2.

**Guideline**

<table>
<thead>
<tr>
<th>Screw, top shock absorber</th>
<th>M10</th>
<th>45 Nm (33.2 lbf ft)</th>
<th>Loctite®243™</th>
</tr>
</thead>
</table>

- Lift the link fork, mount screw 3 and tighten it.

**Guideline**

<table>
<thead>
<tr>
<th>Screw, bottom shock absorber</th>
<th>M10</th>
<th>45 Nm (33.2 lbf ft)</th>
<th>Loctite®243™</th>
</tr>
</thead>
</table>

- Attach brake line 4 to the holder.

**Finishing work**
- Remove the motorcycle from the lift stand. (p. 45)
13.20 Removing the seat
- Open quick release 1 and raise the rear of the seat.
- Pull back the seat and remove it.

13.21 Mounting the seat
- Hook the seat onto holding lug 1, lower the seat at the rear, and push it forward.
  ✔ Holding lug 2 hangs on the front fairing.
- Close quick release 3.

13.22 Checking the chain for dirt
- Check the chain for coarse dirt accumulation.
  » If the chain is very dirty:
    - Clean the chain. (☞ p. 56)
13.23 Cleaning the chain

**Warning**

**Danger of accidents** Lubricants on the tires reduces the road grip.
- Remove lubricants from the tires using a suitable cleaning agent.

**Warning**

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.
- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

**Note**

**Environmental hazard** Hazardous substances cause environmental damage.
- Dispose of oils, grease, cleaning agents, brake fluid etc. properly and in compliance with the applicable regulations.

**Info**

The service life of the chain depends largely on its maintenance.

<table>

13.24 Checking the chain tension

**Warning**

**Danger of accidents** Incorrect chain tension damages components and results in accidents.
- If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if over loaded.
- If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.
- Check the chain tension regularly.
- Set the chain tension in accordance with the specification.

<table>
<thead>
<tr>
<th>Preparatory work</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Raise the motorcycle with a lift stand. (<a href="#">p. 45</a>)</td>
<td></td>
</tr>
</tbody>
</table>
Main work
– Press the chain upward at the end of the chain sliding piece and determine chain tension A.

Info
The top part of chain 1 must be taut.
Chain wear is not always even, so you should repeat this measurement at different chain positions.

<table>
<thead>
<tr>
<th>Chain tension</th>
<th>5 ... 8 mm (0.2 ... 0.31 in)</th>
</tr>
</thead>
</table>

» If the chain tension does not meet the specification:
– Adjust the chain tension. (p. 57)

Finishing work
– Remove the motorcycle from the lift stand. (p. 45)

13.25 Adjusting the chain tension

Warning
Danger of accidents Incorrect chain tension damages components and results in accidents.
If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded.
If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.
– Check the chain tension regularly.
– Set the chain tension in accordance with the specification.

Preparatory work
– Raise the motorcycle with a lift stand. (p. 45)
– Check the chain tension. (p. 56)

Main work
– Loosen nut 1.
– Loosen nuts 2.
– Adjust the chain tension by turning adjusting screws 3 left and right.

Guideline
Chain tension 5 ... 8 mm (0.2 ... 0.31 in)

Turn the adjusting screws 3 on the left and right so that the markings on the left and right chain adjusters 4 are in the same position relative to the reference marks A. The rear wheel is then correctly aligned.

– Tighten nuts 2.
– Make sure that chain adjusters 4 are fitted correctly on adjusting screws 3.
– Tighten nut 1.

Guideline
Nut, rear wheel spindle M12x1 40 Nm (29.5 lbf ft)
13 SERVICE WORK ON THE CHASSIS

Finishing work
– Remove the motorcycle from the lift stand. (p. 45)

13.26 Checking the chain, rear sprocket, motor sprocket, and chain guide

Preparatory work
– Raise the motorcycle with a lift stand. (p. 45)

Main work
– Check the chain, rear sprocket, and motor sprocket for wear.
  > If the chain, rear sprocket or motor sprocket is worn:
    – Change the drivetrain kit.

Info
The motor sprocket, rear sprocket, and chain should always be replaced together.
When fitting the chain joint, always make sure that the closed side of the joint faces forward (riding direction).

– Check the chain for wear.
  > If the chain is worn:
    – Change the drivetrain kit.

Info
When a new chain is mounted, the rear sprocket and motor sprocket should also be changed.
New chains wear out faster on old, worn sprockets.

– Check the chain sliding guard for wear.
  > If the ridge is worn down to the level of the main corpus:
    – Change the chain sliding guard.
  – Check that the chain sliding guard is firmly seated.
  > If the chain sliding guard is loose:
    – Tighten the screw of the chain sliding guard.

Guideline

<table>
<thead>
<tr>
<th>Screw, chain sliding guard</th>
<th>M6</th>
<th>3 Nm (2.2 lbf ft)</th>
</tr>
</thead>
</table>

400227-01

Q00402-10
Check the chain sliding piece for wear.

- If the lower edge of the chain pins is in line with or below the chain sliding piece:
  - Change the chain sliding piece.
- Check that the chain sliding piece is firmly seated.
  - If the chain sliding piece is loose:
    - Tighten screw on the chain sliding piece.

<table>
<thead>
<tr>
<th>Guideline</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Screw, chain sliding piece</td>

<td>15 Nm</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(11.1 lbf ft)</td>
</tr>
</tbody>
</table>

Check the chain guide for wear.

- If the light part of the chain guide is worn:
  - Change the chain guide.

<table>
<thead>
<tr>
<th>Info</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Wear can be seen on the front of</td>
<td></td>
</tr>
<tr>
<td>the chain guide.</td>
<td></td>
</tr>
</tbody>
</table>

- Check that the chain guide is firmly seated.

- If the chain guide is loose:
  - Tighten the screws on the chain guide.

<table>
<thead>
<tr>
<th>Guideline</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Remaining screws, chassis</td>
<td>M6</td>
<td>10 Nm</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(7.4 lbf ft)</td>
</tr>
</tbody>
</table>

**Finishing work**

- Remove the motorcycle from the lift stand. (p. 45)
13.27 Adjusting the chain guide

Info
The size of the chain wheel varies with the number of teeth. The chain guide can be adjusted on small sprockets.

- Remove screw 1.
- Position the chain guide.
- Mount and tighten the screw.

Guideline

| Remaining screws, chassis | M6 | 10 Nm (7.4 lbf ft) |

13.28 Checking the frame

- Check the frame for damage, cracks, and deformation.

  » If the frame shows signs of damage, cracks, or deformation:
    - Change the frame.

Guideline

Repairs on the frame are not permitted.

13.29 Checking the link fork

- Check the link fork for damage, cracks, and deformation.

  » If the link fork shows signs of damage, cracks, or deformation:
    - Change the link fork.

Guideline

Repairs on the link fork are not permitted.

13.30 Checking the rubber grip

- Check the rubber grips on the handlebar for damage, wear, and looseness.

Info
The rubber grips are vulcanized onto a sleeve on the left and onto the handle tube of the throttle grip on the right. The left sleeve is clamped onto the handlebar. The rubber grip can only be replaced with the sleeve or the throttle tube.

  » If a rubber grip is damaged, worn, or loose:
    - Change the rubber grip.
Check that screw 1 is firmly seated.

Guideline

<table>
<thead>
<tr>
<th>Screw, fixed grip</th>
<th>M4</th>
<th>5 Nm (3.7 lbf ft)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Loctite®243™</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Diamond 2 must be located at the top.
14 BRAKE SYSTEM

14.1 Checking play of handbrake lever

**Warning**

**Danger of accidents** The brake system fails in the event of overheating.

If there is no free travel on the hand brake lever, pressure builds up on the front brake circuit.

– Set the free travel on the hand brake lever in accordance with the specification.

– Push the handbrake lever forwards and check play A.

| Play of hand brake lever | 3 … 5 mm (0.12 … 0.2 in) |

> If the play does not meet specifications:

– Adjust the play of the hand brake lever. (p. 62)

14.2 Adjusting the play of the hand brake lever

– Check the play of the handbrake lever. (p. 62)

– Adjust the play of the hand brake lever using adjusting screw 1.

Guideline

| Play of hand brake lever | 3 … 5 mm (0.12 … 0.2 in) |

14.3 Adjusting the basic position of the hand brake lever

– Remove screw 1. Take off cover 2.

– Check the play of the handbrake lever. (p. 62)

– Adjust the basic position of the hand brake lever with adjusting screw 3 to the rider's hand size.
14.4 Checking the brake discs

**Warning**

*Danger of accidents*  Worn-out brake discs reduce the braking effect.

- Make sure that worn-out brake discs are replaced immediately. (Your authorized KTM workshop will be glad to help.)

- Check the front and rear brake disc thickness at multiple points for the dimension A.

**Info**

Wear reduces the thickness of the brake disc around the contact surface of the brake linings.

<table>
<thead>
<tr>
<th>Brake discs - wear limits</th>
</tr>
</thead>
<tbody>
<tr>
<td>front</td>
</tr>
<tr>
<td>rear</td>
</tr>
</tbody>
</table>

» If the brake disc thickness is less than the specified value:
   - Change the front brake disc.
   - Change the rear brake disc.

» Check the front and rear brake discs for damage, cracking, and deformation.
   - If the brake disc exhibits damage, cracking, or deformation:
     - Change the front brake disc.
     - Change the rear brake disc.
14.5 Checking the front brake fluid level

**Warning**

**Danger of accidents**  An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

– Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

**Warning**

**Skin irritation**  Brake fluid causes skin irritation.

– Keep brake fluid out of the reach of children.
– Wear suitable protective clothing and safety glasses.
– Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
– Consult a doctor immediately if brake fluid has been swallowed.
– Rinse the affected area with plenty of water in the event of contact with the skin.
– Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
– If brake fluid spills on to your clothing, change the clothing.

**Warning**

**Danger of accidents**  Old brake fluid reduces the braking effect.

– Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

**Note**

**Environmental hazard**  Hazardous substances cause environmental damage.

– Dispose of oils, grease, cleaning agents, brake fluid etc. properly and in compliance with the applicable regulations.

**Info**

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.

Only use clean brake fluid from a sealed container.

– Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
– Remove screws ①.
– Take off cover ② with membrane ③.
– Check the brake fluid level.

<table>
<thead>
<tr>
<th>Brake fluid level below reservoir rim</th>
<th>5 mm (0.2 in)</th>
</tr>
</thead>
</table>

» If the brake fluid level does not meet specifications:
  – Add front brake fluid.  
  
  – Position the cover with the membrane. Mount and tighten the screws.
14.6  Adding front brake fluid

**Warning**

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

– Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

**Warning**

**Skin irritation** Brake fluid causes skin irritation.

– Keep brake fluid out of the reach of children.
– Wear suitable protective clothing and safety glasses.
– Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
– Consult a doctor immediately if brake fluid has been swallowed.
– Rinse the affected area with plenty of water in the event of contact with the skin.
– Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
– If brake fluid spills on to your clothing, change the clothing.

**Warning**

**Danger of accidents** Old brake fluid reduces the braking effect.

– Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

**Note**

**Environmental hazard** Hazardous substances cause environmental damage.

– Dispose of oils, grease, cleaning agents, brake fluid etc. properly and in compliance with the applicable regulations.

**Info**

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.

Only use clean brake fluid from a sealed container.

**Preparatory work**

– Check the front brake linings. (p. 66)
14 BRAKE SYSTEM

Main work
– Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
– Remove screws 1.
– Take off cover 2 with membrane 3.
– Correct the brake fluid level.

Guideline

<table>
<thead>
<tr>
<th>Brake fluid level below reservoir rim</th>
<th>5 mm (0.2 in)</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Brake fluid DOT 4 / DOT 5.1 (p. 98)</th>
</tr>
</thead>
</table>

– Position the cover with the membrane. Mount and tighten the screws.

Info
– Immediately clean up any brake fluid that has overflowed or spilled using water.

14.7 Checking the front brake linings

Warning
Danger of accidents
Worn-out brake linings reduce the braking effect.
– Ensure that worn-out brake linings are replaced immediately. (Your authorized KTM workshop will be glad to help.)

– Check the brake linings for minimum thickness A.

Minimum thickness A ≥ 1 mm (≥ 0.04 in)

If the minimum thickness is less than specified:
– Change the brake linings of the front brake. (p. 66)

– Check the brake linings for damage and cracking.
  – If damage or wear is encountered:
    – Change the brake linings of the front brake. (p. 66)

14.8 Changing the brake linings of the front brake

Warning
Danger of accidents
Incorrect servicing will cause the brake system to fail.
– Ensure that service work and repairs are performed professionally. (Your authorized KTM workshop will be glad to help.)
**Warning**  
Skin irritation  
Brake fluid causes skin irritation.  
– Keep brake fluid out of the reach of children.  
– Wear suitable protective clothing and safety glasses.  
– Do not allow brake fluid to come into contact with the skin, the eyes or clothing.  
– Consult a doctor immediately if brake fluid has been swallowed.  
– Rinse the affected area with plenty of water in the event of contact with the skin.  
– Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.  
– If brake fluid spills on to your clothing, change the clothing.

**Warning**  
Danger of accidents  
Old brake fluid reduces the braking effect.  
– Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

**Warning**  
Danger of accidents  
Brake linings which have not been approved alter the braking efficiency.  
Not all brake linings are tested and approved for KTM motorcycles. The structure and friction coefficient of the brake linings, and thus their brake power, may vary greatly from that of original brake linings. If brake linings are used that differ from the original equipment, compliance with the original homologation is not guaranteed. In this case, the vehicle no longer corresponds to its condition at delivery and the manufacturer warranty shall be void.  
– Only use brake linings approved and recommended by KTM.

**Note**  
Environmental hazard  
Hazardous substances cause environmental damage.  
– Dispose of oils, grease, cleaning agents, brake fluid etc. properly and in compliance with the applicable regulations.

**Info**  
Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.  
Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.  
Only use clean brake fluid from a sealed container.

---

**Preparatory work**  
– Raise the motorcycle with a lift stand. (p. 45)

**Main work**  
– Move the brake fluid reservoir mounted on the handlebar to a horizontal position.  
– Remove screws 1.  
– Take off cover 2 with membrane 3.
- Remove screw 4 and 5.
- Press back the brake linings by slightly tilting the brake caliper laterally on the brake disc. Carefully pull the brake caliper backward from the brake disc.
- Press the brake piston back into the basic position and ensure that brake fluid does not flow out of the brake fluid reservoir, extracting some if necessary.

- Remove lock ring 6.
- Remove screw 7.
- Remove the brake linings.
- Clean the brake caliper and the brake caliper bracket.
- Position the new brake linings.

**Info**
Always change the brake linings in pairs.
Ensure that the brake linings are correctly positioned in the holding spring.

- Mount and tighten screw 7.

**Guideline**

<table>
<thead>
<tr>
<th>Screw, brake linings</th>
<th>M5</th>
<th>8 Nm (5.9 lbf ft)</th>
</tr>
</thead>
</table>

- Mount lock ring 6.

**Warning**

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.
- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

- Check the brake discs. (p. 63)

- Position the brake caliper, mount screw 4, and tighten.

**Guideline**

<table>
<thead>
<tr>
<th>Screw, front brake caliper</th>
<th>M8x60</th>
<th>20 Nm (14.8 lbf ft)</th>
<th>Loctite® 243™</th>
</tr>
</thead>
</table>

- Mount and tighten screw 5.

**Guideline**

| Screw, front brake caliper | M8x40 | 20 Nm (14.8 lbf ft) | Loctite® 243™ |
Check the brake fluid level and correct if necessary.

Guideline

| Brake fluid level below reservoir rim | 5 mm (0.2 in) |
| Brake fluid DOT 4 / DOT 5.1 (p. 98) |

Position cover 2 with membrane 3.
Mount and tighten screws 1.

Info

Immediately clean up any brake fluid that has overflowed or spilled using water.

Finishing work

- Remove the motorcycle from the lift stand. (p. 45)

### 14.9 Checking the free travel of the foot brake lever

**Warning**

**Danger of accidents** The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

- Set the free travel on the foot brake lever in accordance with the specification.

- Disconnect spring 1.
- Move the foot brake lever back and forth between the end stop and the foot brake cylinder piston bracket and check free travel A.

Guideline

| Free travel of foot brake lever | 3 ... 5 mm (0.12 ... 0.2 in) |

- If the free travel does not meet specifications:
  - Adjust the free travel of the hand brake lever. (p. 69)
- Attach spring 1.

### 14.10 Adjusting the free travel of the foot brake lever

**Warning**

**Danger of accidents** The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

- Set the free travel on the foot brake lever in accordance with the specification.
14 BRAKE SYSTEM

1. Detach the foot brake lever spring.
2. Loosen nut 1.
3. Turn push rod 2 accordingly until you have free travel A.

Guideline

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Free travel of foot brake lever</td>
<td>3 ... 5 mm (0.12 ... 0.2 in)</td>
</tr>
</tbody>
</table>

4. Hold push rod 2 and tighten nut 1.
5. Attach the foot brake lever spring.
6. Check whether the basic position of the foot brake lever is suitable for the rider.

» When the basic position of the foot brake lever needs to be adjusted:
   - Adjust the basic position of the foot brake lever. (p. 70)

14.11 Adjusting the basic position of the foot brake lever

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Danger of accidents</td>
</tr>
</tbody>
</table>

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

- Set the free travel on the foot brake lever in accordance with the specification.

1. Detach the foot brake lever spring.
2. Loosen nut 1.
3. Turn back push rod 2 until free travel is at a maximum.
4. For an individual adjustment of the basic position of the foot brake lever, loosen the screw 3 and turn the eccentric brake lever stop 4 accordingly.
5. Tighten screw 3.

Guideline

<table>
<thead>
<tr>
<th>Parameter</th>

<td>3 ... 5 mm (0.12 ... 0.2 in)</td>
</tr>
</tbody>
</table>

7. Hold push rod 2 and tighten nut 1.
8. Attach the foot brake lever spring.
9. Check whether the basic position of the foot brake lever is suitable for the rider.
14.12 Checking the rear brake fluid level

**Warning**

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

– Check the brake system and ensure that nobody drives the vehicle before the problem is eliminated.
  (Your authorized KTM workshop will be glad to help.)

**Warning**

**Danger of accidents** Old brake fluid reduces the braking effect.

– Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

14.13 Adding rear brake fluid

**Warning**

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

– Check the brake system and ensure that nobody drives the vehicle before the problem is eliminated.
  (Your authorized KTM workshop will be glad to help.)

**Warning**

**Skin irritation** Brake fluid causes skin irritation.

– Keep brake fluid out of the reach of children.
– Wear suitable protective clothing and safety glasses.
– Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
– Consult a doctor immediately if brake fluid has been swallowed.
– Rinse the affected area with plenty of water in the event of contact with the skin.
– Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
– If brake fluid spills on to your clothing, change the clothing.

**Warning**

**Danger of accidents** Old brake fluid reduces the braking effect.

– Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)
Note

Environmental hazard  Hazardous substances cause environmental damage.
  – Dispose of oils, grease, cleaning agents, brake fluid etc. properly and in compliance with the applicable regulations.

Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.
Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.
Only use clean brake fluid from a sealed container.

Preparatory work
  – Raise the motorcycle with a lift stand. (p. 45)
  – Check the brake linings of the rear brake. (p. 72)

Main work
  – Remove screws 1.
  – Take off cover 2 with washer 3 and membrane 4.
  – Add brake fluid up to level A.

Guideline

| Level A (brake fluid level below reservoir rim) | 10 mm (0.39 in) |
| Brake fluid DOT 4 / DOT 5.1 (p. 98) |

  – Position cover with washer and membrane.
  – Mount and tighten the screws.

Info

Immediately clean up any brake fluid that has overflowed or spilled using water.

Finishing work
  – Remove the motorcycle from the lift stand. (p. 45)

14.14  Checking the brake linings of the rear brake

Warning

Danger of accidents  Worn-out brake linings reduce the braking effect.
  – Ensure that worn-out brake linings are replaced immediately. (Your authorized KTM workshop will be glad to help.)
- Check the brake linings for minimum thickness $A$.

| Minimum thickness $A$ | $\geq 1\text{ mm} (\geq 0.04\text{ in})$ |

- If the minimum thickness is less than specified:
  - Change the rear brake linings. (p. 73)
- Check the brake linings for damage and cracking.
  - If damage or wear is encountered:
    - Change the rear brake linings. (p. 73)

### 14.15 Changing the rear brake linings

**Warning**

**Danger of accidents** Incorrect servicing will cause the brake system to fail.
- Ensure that service work and repairs are performed professionally. (Your authorized KTM workshop will be glad to help.)

**Warning**

**Skin irritation** Brake fluid causes skin irritation.
- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

**Warning**

**Danger of accidents** Old brake fluid reduces the braking effect.
- Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

**Warning**

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.
- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

**Warning**

**Danger of accidents** Brake linings which have not been approved alter the braking efficiency.
Not all brake linings are tested and approved for KTM motorcycles. The structure and friction coefficient of the brake linings, and thus their brake power, may vary greatly from that of original brake linings. If brake linings are used that differ from the original equipment, compliance with the original homologation is not guaranteed. In this case, the vehicle no longer corresponds to its condition at delivery and the manufacturer warranty shall be void.
- Only use brake linings approved and recommended by KTM.
**Note**

**Environmental hazard**  Hazardous substances cause environmental damage.
- Dispose of oils, grease, cleaning agents, brake fluid etc. properly and in compliance with the applicable regulations.

---

**Info**

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.

Only use clean brake fluid from a sealed container.

---

**Preparatory work**
- Raise the motorcycle with a lift stand. ([p. 45](#))

**Main work**
- Remove lock ring 1.
- Remove screw 2.
- Remove screw 3 and screw 4.
- Take off the brake caliper.

**Info**
- Do not kink or damage the brake line.
- Remove the brake linings.
- Clean the brake caliper and the brake caliper bracket.
- Allow the brake caliper and the brake line to hang loosely to the side.
- Check the brake discs. ([p. 63](#))
- Remove screws 5.
- Take off cover 6 with washer 7 and membrane 8.
- Press the brake piston back into the basic position and ensure that brake fluid does not flow out of the brake fluid reservoir, extracting some if necessary.
- Position the new brake linings.

**Info**
- Always change the brake linings in pairs. Ensure that the brake linings are correctly positioned in the holding spring.
- Position the brake caliper on the brake disc.
  - ✔️ The brake linings are correctly positioned.
Mount and tighten screw 3.

Guideline

| Screw, rear brake caliper | M6x16 | 10 Nm (7.4 lbf ft) | Loctite®243™ |

Mount and tighten screw 4.

Guideline

| Screw, rear brake caliper | M6x40 | 10 Nm (7.4 lbf ft) | Loctite®243™ |

Mount and tighten screw 2.

Guideline

| Screw, brake linings | M5 | 8 Nm (5.9 lbf ft) |

Mount lock ring 1.

Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.

Add brake fluid up to level A.

Guideline

| Level A (brake fluid level below reservoir rim) | 10 mm (0.39 in) |

Brake fluid DOT 4 / DOT 5.1 (p. 98)

Position cover with washer and membrane.

Mount and tighten the screws.

Info

Immediately clean up any brake fluid that has overflowed or spilled using water.

Finishing work

Remove the motorcycle from the lift stand. (p. 45)
15.1 Removing the front wheel

Preparatory work
– Raise the motorcycle with a lift stand. (p. 45)

Main work
– Remove screw 1.
– Loosen screws 2.

Warning
Danger of accidents  Damaged brake discs reduce the braking effect.
– Always lay the wheel down in such a way that the brake disc is not damaged.

– Hold the front wheel and remove the wheel spindle. Take the front wheel out of the fork.

Info
Do not actuate the hand brake lever when the front wheel is removed.

– Remove spacers 3.

15.2 Installing the front wheel

Warning
Danger of accidents  Oil or grease on the brake discs reduces the braking effect.
– Always keep the brake discs free of oil and grease.
– Clean the brake discs with brake cleaner when necessary.
Check the wheel bearing for damage and wear.

- If the wheel bearing is damaged or worn:
  - Change front wheel bearing.
- Clean and grease the contact surfaces A of the spacers.

| Long-life grease (p. 99) |

- Insert the spacers.

- Clean and grease the wheel spindle.

| Long-life grease (p. 99) |

- Position the front wheel.
  - The brake linings are correctly positioned.
- Insert the wheel spindle.

- Mount and tighten screw 1.

| Guideline |

| Screw, front wheel spindle | M10 | 40 Nm (29.5 lbf ft) |

Loctite® 243™

- Operate the hand brake lever several times until the brake linings are seated correctly against the brake disc.
- Remove the motorcycle from the lift stand. (p. 45)
- Operate the front brake and compress the fork a few times firmly.
  - The fork legs straighten.
- Tighten screws 2.

| Guideline |

| Screw, fork stub | M6 | 10 Nm (7.4 lbf ft) |

15.3 Removing the rear wheel

Preparatory work
- Raise the motorcycle with a lift stand. (p. 45)

Main work
- Remove nut 1.
- Take off chain adjuster 2.
Pull out wheel spindle 3 far enough to allow the rear wheel to be pushed forward.

Push the rear wheel forward as far as possible. Remove the chain from the rear sprocket.

**Info**
Cover the components to protect them against damage.

**Warning**
**Danger of accidents** Damaged brake discs reduce the braking effect.
- Always lay the wheel down in such a way that the brake disc is not damaged.

Hold the rear wheel and remove the wheel spindle. Take the rear wheel out of the link fork.

**Info**
Do not operate the foot brake lever when the rear wheel is removed.

Remove spacers 4.

### 15.4 Installing the rear wheel

**Warning**
**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.
- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

**Main work**
- Check the wheel bearing for damage and wear.
  - If the wheel bearing is damaged or worn:
    - Change the rear wheel bearing.
- Clean and grease the contact surfaces A of the spacers.
  - Long-life grease (p. 99)
- Insert the spacers.

**Info**
Insert the wide spacer on the left in the direction of travel.
- Clean and grease wheel spindle 1

Long-life grease (p. 99)

- Position the rear wheel and insert wheel spindle.
  - The brake linings are correctly positioned.
- Mount the chain.
- Position chain adjuster 2 on both sides and push the wheel spindle in all the way.

- Mount nut 3, but do not tighten it yet.
- Make sure that the chain adjusters are fitted correctly on the adjusting screws.
- Check the chain tension. (p. 56)
- Tighten nut 3.  
  Guideline

| Nut, rear wheel spindle | M12x1 | 40 Nm (29.5 lbf ft) |

- Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.

**Finishing work**  
- Remove the motorcycle from the lift stand. (p. 45)

### 15.5 Checking the tire condition

**Info**
Only mount tires approved and/or recommended by KTM. Other tires could have a negative effect on handling characteristics.

The type, condition, and pressure of the tires all have a major impact on the handling characteristic of the motorcycle.

The tires mounted on the front and rear wheels must have a similar profile.

Worn tires have a negative effect on handling characteristics, especially on wet surfaces.

- Check the front and rear tires for cuts, embedded objects, and other damage.
  - If the tires have cuts, run-in objects, or other damage:
    - Change the tires. ⬅️
15.6 Checking tire pressure

- Remove protection cap.
- Check tire pressure when the tires are cold.

<table>
<thead>
<tr>
<th>Offroad tire pressure</th>
</tr>
</thead>
<tbody>
<tr>
<td>front</td>
</tr>
<tr>
<td>rear</td>
</tr>
</tbody>
</table>

- If the tire pressure does not meet specifications:
  - Correct tire pressure.
  - Mount the protection cap.

15.7 Checking spoke tension

**Warning**

**Danger of accidents** Incorrectly tensioned spokes impair the handling characteristic and result in secondary damage.

The spokes break due to being overloaded if they are too tightly tensioned. If the tension in the spokes is too low, then lateral and radial run-out will form in the wheel. Other spokes will become looser as a result.

- Check spoke tension regularly, and in particular on a new vehicle. (Your authorized KTM workshop will be glad to help.)
– Strike each spoke briefly using a screwdriver blade.

**Info**
The frequency of the sound depends on the spoke length and spoke diameter. If you hear different tone frequencies from different spokes of equal length and diameter, this is an indication of different spoke tensions.

*You should hear a high note.*

» If the spoke tension differs:
  – Correct the spoke tension.

– Check the spoke torque.

**Guideline**

<table>

16.1 Overview of battery charger

1 Battery charger
2 Carrying handle
3 Power cord
4 Charging cable

16.2 Positioning the battery charger

**Warning**  
**Risk of injury**  If the battery charger is used incorrectly, its intrinsic safety cannot be guaranteed. The battery charger is only suitable for use with a Powerpack.
- Only use the battery charger with a Powerpack.
- Only operate the battery charger using household sockets with a ground conductor.
- Do not use any additional adapters or extensions.
- Follow the applicable safety instructions of the power connection.

**Warning**  
**Risk of injury**  There is a risk of electric shock if the battery charger or the cables have been manipulated or damaged. The battery charger does not contain any parts which require maintenance.
- Do not modify the battery charger or the cables.
- Only use original cables.
- Never open the battery charger housing.
- Do not insert any objects into the battery charger housing from the outside.
- Do not use the battery charger if cables, plugs, or parts of the battery charger have been damaged or are soiled.

**Info**  
The battery charger contains sensitive electronics and must be handled with appropriate care. The battery charger may be damaged or destroyed if it is dropped, knocked or otherwise subject to mechanical overload. When transporting the battery charger, ensure appropriate means of securing the cargo. Damage caused due to improper handling or improper transport is excluded from the manufacturer warranty. The battery charger only meets IP66 when the original power cord is being used.
- Place the battery charger on a firm, level, and horizontal surface.

**Info**

Despite IP66, the battery charger should only be used in a dry environment, as moisture may penetrate into the interior when connecting and disconnecting the connections.

- Check the battery charger and mains cable for external damage.
- Ensure the battery charger is adequately ventilated.
- Use the battery charger in the temperature range permitted.

**Guideline**

<table>
<thead>
<tr>
<th>Ambient temperature</th>
<th>~20 … 50 °C (~4 … 122 °F)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Temperature range of the Powerpack LV</td>
<td>0 … 50 °C (32 … 122 °F)</td>
</tr>
<tr>
<td>Do not operate the battery charger directly in a warm environment if it has previously been stored in a cold environment.</td>
<td></td>
</tr>
</tbody>
</table>

**Info**

The change in temperature can cause moisture to condense on the battery charger.

- Ensure that the power plug for the battery charger always remains easily accessible.

### 16.3 Charging the Powerpack LV

**Caution**

**Danger of burns**  The metal housing of the battery charger becomes hot during operation.

- Only touch the battery charger by the carrying handle.
- After charging, allow the battery charger to cool before stowing it away.

**Note**

**Material damage**  The power supply will be damaged in the event of an overload.

- Ensure that the power outlet can supply the steady current required and is protected by a suitable fuse.

<table>
<thead>
<tr>
<th>Fuse protection at mains voltage 100 V minimum</th>
<th>15 A</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fuse protection at mains voltage 120 V minimum</td>
<td>13 A</td>
</tr>
<tr>
<td>Fuse protection at mains voltage 230 V minimum</td>
<td>10 A</td>
</tr>
</tbody>
</table>

**Note**

**Environmental hazard**  A lithium-ion battery (Powerpack LV) contains components and elements that are harmful to the environment.

- Never throw a Powerpack LV into the household trash.
- Dispose of the Powerpack LV properly and in compliance with the applicable regulations. (Your authorized KTM workshop will be glad to help.)
Info
Do not activate the vehicle while the battery charger is connected to the Powerpack LV.
If the vehicle is activated during the charging process, the vehicle switches to the malfunction state.

Info
If the temperature of the Powerpack LV exceeds the permissible value while it is being charged, the battery charger stops charging. The malfunction is displayed on the multifunctional element.
After the temperature of the Powerpack LV returns to the permissible range, charging is resumed automatically.

Preparatory work
– Position the battery charger. (p. 82)
– Press and hold the On/Off button until the multifunctional element goes out.
– Remove the magnetic switch from the holder on the handlebar.

Main work
– Remove charging socket protection cap 1.

– Remove charging plug protection cap 2.

– Make sure that all plugs, bushings, and cables are dry.

Warning
Risk of injury The intrinsic safety of the Powerpack LV can only be guaranteed if the original battery charger is used.
The Powerpack LV may only be charged with the original battery charger.
– Only use the original battery charger to charge the Powerpack LV.

– Connect the battery charger to the Powerpack LV.
Guideline
Observe plug marking A.
Insert the plug straight so that the contacts are not bent.
- Connect the power plug for the battery charger to the mains connection.
  - Charging starts automatically.
  - The multifunctional element indicates the charging level.
- Monitor the charging level of the Powerpack LV on the multifunctional element (p. 20).

**Info**
It is recommended not to leave the vehicle unattended for long periods during charging. When charging is complete, three beeps are emitted and all segments of the charging level indicator light up continuously.

- Press and hold the On/Off button until the multifunctional element goes out.
- Make sure that all plugs, bushings, and cables are dry.
- Disconnect the battery charger power plug from the mains connection.

- Unlock the charging plug lock counterclockwise and disconnect the charging cable from the Powerpack LV.

**Guideline**

Pull on the structured part of the plug. Do not pull on the cable.

- Mount charging plug protection cap 2.
– Check charging socket protection cap 1.
  » If the charging socket protection cap is dirty:
    – Clean the charging socket protection cap without water or compressed air.
  » If the charging socket protection cap is damaged or worn:
    – Change the charging socket protection cap.
– Mount the charging socket protection cap.
17.1 Cooling

The Powerpack LV 1 and the electric motor 2 are air-cooled. Cooling is effected by the air stream. The lower the speed, the less the cooling effect. Dirty cooling fins also reduce the cooling effect.
18.1 Cleaning the motorcycle

**Note**

**Material damage** Components become damaged or destroyed if a pressure cleaner is used incorrectly. The high pressure forces water into the electrical components, connectors, throttle cables, and bearings, etc. Pressure which is too high causes malfunctions and destroys components.

- Do not direct the water jet directly on to electrical components, connectors, throttle cables or bearings.
- Maintain a minimum distance between the nozzle of the pressure cleaner and the component.
  
  Minimum clearance 60 cm (23.6 in)

**Note**

**Environmental hazard** Hazardous substances cause environmental damage.

- Dispose of oils, grease, cleaning agents, brake fluid etc. properly and in compliance with the applicable regulations.

**Info**

Clean the motorcycle regularly to maintain its value and appearance over a long period. Avoid direct sunshine when cleaning the motorcycle.

- Remove the coarse dirt particles with a gentle water jet.

  **Guideline**
  
  Do not remove the bearing bridge of the engine sprocket during the entire operation.

- Spray the heavily soiled parts with a normal commercial motorcycle cleaner and clean using a brush.

  **Motorcycle cleaner** (see p. 99)

**Info**

- Use warm water containing normal motorcycle cleaner and a soft sponge.
  
  Never apply motorcycle cleaner to the dry motorcycle. Always rinse the motorcycle with water before use.

- After rinsing the motorcycle with a gentle spray of water, allow it to dry thoroughly.

**Warning**

**Danger of accidents** Moisture and dirt impair the brake system.

- Explain to your child that he or she must brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.

- After cleaning, your child should ride a short distance until the brake system has dried through careful braking.

**Info**

- The heat causes the water to evaporate even in inaccessible parts of the vehicle.
- After the motorcycle has cooled down, lubricate all moving parts and pivot points.
- Clean the chain. (p. 56)
- Treat bare metal (except for brake discs) with a corrosion inhibitor.

Preserving materials for paints, metal and rubber (p. 99)

- Treat all plastic parts and powder-coated parts with a mild cleaning and care product.

Special cleaner for glossy and matte paint finishes, metal and plastic surfaces (p. 99)
19.1 Storage

**Info**
If you plan to garage the motorcycle for a longer period, perform the following steps or have them performed.

Before storing the motorcycle, check all parts for function and wear. If service, repairs, or replacements are necessary, you should do this during the storage period (less workshop overload). In this way, you can avoid long workshop waiting times at the start of the new season.

- Clean the motorcycle. (p. 88)
- Check tire pressure. (p. 80)
- Charge the Powerpack LV. (p. 83)

**Guideline**
Stop charging at 30%.

✔ The last segment lights up yellow.

**Tip**
If necessary, ride the vehicle to deplete the Powerpack LV sufficiently.

- Store the vehicle in a dry location that is not subject to large fluctuations in temperature.

**Guideline**
Ideal storage temperature 10 ... 20 °C (50 ... 68 °F)

**Info**
KTM recommends jacking up the motorcycle.

- Raise the motorcycle with a lift stand. (p. 45)
- Cover the motorcycle with a tarp or cover that is permeable to air.

**Info**
Do not use non-porous materials since they prevent humidity from escaping, thus causing corrosion.

19.2 Preparing for use after storage

- Remove the motorcycle from the lift stand. (p. 45)
- Charge the Powerpack LV. (p. 83)
- Perform checks and maintenance measures when preparing for use. (p. 24)
- Take a test ride.
The malfunctions are indicated by malfunction indicator lamp and by acoustic signals that sound at the same time.

**Tip**
As a first measure for all malfunctions, switch off the vehicle using the On/Off button, wait one minute, and switch it on again. If a malfunction is not eliminated by the steps specified here, or a blink code is not listed, an authorized KTM workshop will be happy to help you.

**Info**
The pause between the signals of the 1st digit is 0.25 seconds.
The pause between the 1st and 2nd digits is 1 second.
The pause between the signals of the 2nd digit is also 0.25 seconds.
The pause until the blink code repeats is 3 seconds.

(949) 727-3227 • msf-usa.org
The information contained in this publication is offered for the benefit of those who have an interest in riding off-highway motorcycles. The information has been compiled from publications, interviews and observations of individuals and organizations familiar with the use of off-highway motorcycles. Because there are many differences in product design, riding terrain and riding styles, there may be organizations and individuals who hold differing opinions. Consult your local motorcycle dealers or experienced off-highway motorcycle riders about appropriate riding locations in your area. Although the Motorcycle Safety Foundation will continue to publish responsible viewpoints on this subject, it must disclaim specific or general liability for the views expressed herein.

The Motorcycle Safety Foundation® (MSF) is a national not-for-profit organization promoting the safety of motorcyclists with programs in rider training, operator licensing and public information. The MSF is sponsored by BMW, BRP, Ducati, Harley-Davidson, Honda, Kawasaki, KTM, Piaggio, Polaris Motorcycles, Suzuki, Triumph and Yamaha.
Parents...Be Cautious

Riding Off-Highway Motorcycles (OHMs) can be an enjoyable form of outdoor recreation when done properly. With preparation, practice, and parental supervision your youngster can safely develop and expand his or her riding skills. Remember, off-highway motorcycles are not toys.

This manual is designed to assist you in the important task of teaching your youngster the safe and responsible use of an off-highway motorcycle. We urge you to read this booklet thoroughly. Also read other information provided with the motorcycle. The owner’s manual contains important warnings and features of the motorcycle.

Deciding if your youngster is ready to ride an off-highway motorcycle is an important decision. The MSF strongly urges you to carefully determine your youngster’s readiness to ride. There is a Readiness Checklist in Part 4 of this booklet. **Do not permit youngsters to ride an off-highway motorcycle if you doubt that they will operate the motorcycle safely.**

ANSWERS 41
INTRODUCTION

Purpose of the Booklet

Parents, Youngsters and Off-Highway Motorcycles is designed to assist you in determining if your youngster is ready to ride off-highway motorcycles (OHMs). It also provides you and your youngster with important safety information and tips on learning to ride. This booklet is divided into four parts: Part 1: Determining Your Youngster’s Readiness to Ride an Off-highway Motorcycle; Part 2: Pre-operating Procedures; Part 3: Operating Procedures; Part 4: Readiness Checklist. There is information about protective gear, mounting, control operation and starting the engine. Operating procedures include starting, shifting, stopping and turning.

Important Note To Parents

Once your youngster is ready to learn to ride, YOU must be familiar with the motorcycle. You will be serving as teacher, coach, and safety supervisor for your youngster. You must know the controls, handling characteristics, maintenance requirements, and proper riding techniques. Read and understand the owner’s manual and the labels provided with the vehicle. Review all instructions, requirements, and warnings with your youngster. Find out about state or local off-highway motorcycle requirements.
Other Sources Of Information

In addition to the information provided in *Parents, Youngsters and Off-Highway Motorcycles*, there are other sources for obtaining safety information. The owner’s manual provides specific maintenance and operating procedures for your motorcycle. It also includes warnings and cautions, as well as operating tips. Motorcycle dealers may have other literature and safety information. Another booklet, *Tips and Practice Guide for the Off-Highway Motorcyclist*, gives detailed riding procedures.

The MSF *DirtBike School℠* offers training on how to ride off-highway motorcycles. The course is available to youth as young as six years of age, as well as to adults. Call toll-free 877.288.7093 to enroll or for more information. To find out more on the internet, visit dirtbikeschool.com.
The first important decision you will have to make concerning your youngster and off-highway motorcycles (OHMs) is whether your youngster is ready to ride. There are several factors that you must consider carefully.

There is no certain way to predict that your child is able to ride an OHM safely. However, the following information is a guide to help you determine your youngster’s readiness to ride. Only parents can decide if their youngster has the qualities necessary to operate an off-highway motorcycle safely.

Readiness Guidelines

Physical Development

Physical size and ability are important considerations. For example, a youngster must be big enough to hold the motorcycle up, get on, and comfortably sit on the seat with both feet touching the ground.

Also make sure your youngster can comfortably reach and work all the controls. For example, can they turn the handlebars all the way to the right and left? Can they easily use their feet to work the brake pedal and gearshift lever? Can they operate the throttle and brake levers while they hold onto the handgrips? If not, the youngster is not physically ready to ride this OHM. Refer to the owner’s manual to check for possible adjustments in the position of some of the controls.
Additional signs of physical readiness can be observed in your youngster’s other play activities. In general, a youngster should be well-coordinated, having good balance and agility. This coordination can be demonstrated by the abilities to jump rope, skate, skateboard, ride a bicycle, etc. If a youngster cannot perform well in these types of activities, more physical development is needed.

**SOCIAL/EMOTIONAL DEVELOPMENT**

How a youngster behaves in a social setting can be a sign of social/emotional development. A youngster needs to know about and understand rules. Certain rules are necessary for the safe operation of any vehicle. Youngsters must be willing to follow rules. A good sign is a youngster who obeys rules set by parents. A youngster who does not follow rules is not ready for an OHM.

One indicator that a youngster is ready to ride an OHM is when they demonstrate a safety-conscious attitude and are aware of possible injury from reckless OHM operation. If the youngster has a habit of recklessness or is often involved in accidents while using bicycles or skateboards, the youngster is not ready to ride an OHM.

**REASONING AND DECISION-MAKING ABILITY**

Youngsters should have some knowledge about what may happen if something is done wrong. They must understand that unsafe actions can result in injury. An example of this is knowing the need to look in both directions before crossing a street when walking to school. The ability to make good decisions relates to a youngster’s ability to reason. When presented with a problem, the youngster should be able to come up with a sensible answer. Ask your youngster to tell you what causes accidents and injuries. Your youngster needs to be able to tell
what causes accidents and how to avoid them. In general, a youngster should understand that he or she can get hurt as a result of making poor choices.

**VISUAL PERCEPTIONS AND MOTOR DEVELOPMENT**

This area involves how well a youngster sees and how vision is used with other physical movements. In other words, can a youngster see and react with the proper hand, foot, or body movement?

Several types of visual characteristics are important. The ability to see to the sides while looking straight ahead is called peripheral or side vision. You can determine a youngster’s side vision by having him or her look straight ahead while you move objects to the side. The youngster should be able to see objects ninety degrees to the side while looking straight ahead. Rider awareness and safety improves with good side vision.

Being able to judge distance is another visual skill helpful when operating an OHM. Is your youngster able to tell how far one object is from another, or which of two objects is closer? OHM riding requires a person to judge distance and react properly.

Being good at playing video games, hitting a baseball, etc., is a good sign that a youngster’s eye and hand movements are fairly well coordinated.

In summary, you must consider many things before you decide to put your youngster on an OHM. There is no exact formula to use in making this decision. The Readiness Checklist, Part 4, can assist you with some points to evaluate. If you are not able to check-off most of the statements, your youngster is probably not ready to ride an OHM.
Steps For Safe And Responsible OHM Riding

Once you determine that OHM use is proper for your youngster, it is time to prepare yourself as a good OHM teacher and supervisor.

**STEP ONE: Educate Yourself about OHM Safety and Proper Riding Techniques**

You must learn as much as possible about off-highway motorcycles in general, and especially your youngster’s motorcycle. You must be qualified to instruct and supervise your youngster. This means that you will need to understand the features of the motorcycle and proper riding techniques. The best source of information is the owner’s manual supplied with the motorcycle. Read the owner’s manual before you begin to instruct your youngster about OHM safety. Pay particular attention to the warning labels and stickers on the motorcycle.

**STEP TWO: Teach Your Youngster Safe and Proper Riding Techniques**

Teaching your youngster off-highway motorcycling is a step-by-step process. It begins with safety rules and moves to actual riding techniques. Since youngsters learn at different rates, it will be up to you to set the pace of your youngster’s progress. At some point you may decide that he or she is not ready to ride an OHM.

**STEP THREE: Avoid Unsafe Situations Through Close Supervision**

ALWAYS closely supervise your youngster’s riding. This is true even if your youngster has learned and mastered the rules and skills of safe OHM riding. Youngsters can get tired easily and become careless. They do not always see everything that is important around them. Your close supervision and good judgment are important.
Protective Gear And Clothing

The nature of off-highway riding demands that your youngster wear proper protective gear. Motorcycle riders should ALWAYS wear a helmet, eye protection, gloves, long pants, a long-sleeved shirt or jacket, and over-the-ankle boots. Anything less is not adequate protection. NEVER let anyone ride an off-highway motorcycle without a Department of Transportation (DOT) compliant motorcycle helmet. Be sure the fit is correct. It should be snug but not tight. It must be properly fastened.

Protective gear is necessary in any weather, even when the temperature is warm. In cooler weather you should dress your youngster with additional layers of clothing. Some riders choose to wear a kidney belt and chest or back protector for additional protection. On the right is a drawing of well-equipped riders. Show this drawing to your youngster and point out what is important.
Mounting/Dismounting

Have your youngster wear safety gear whenever getting on a motorcycle. This action will stress the importance of safety gear and help develop safe riding habits.

Mounting is typically from the left side. To mount from the left, point the handlebars straight. While squeezing the front brake lever, swing the right leg over the seat and place the right foot on the ground. Both feet should be in contact with the ground while sitting on the motorcycle. Dismounting reverses the procedure: the kickstand is placed fully down. With the left foot on the ground, the handlebars straight and the front brake lever squeezed, the right leg is swung over the seat and the foot touches the ground.

Correct riding posture helps your youngster operate the controls. Proper straight line riding posture includes:

- Head and eyes up, looking well ahead.
- Shoulders relaxed, back straight.
- Elbows bent, slightly out and away from the body.
- Hands on the handlebars.
- Knees in toward the tank.
- Feet on the footpegs, toes pointing straight ahead.

The hand and foot controls are important to riding safely. While riding, both hands should be kept on the handlebars and both feet on the footpegs of the motorcycle. Removing a hand or foot can reduce the ability to control the motorcycle.

An off-highway motorcycle rider will need to shift body weight in certain situations. This is especially true in maneuvers such as turning, negotiating hills, and riding on bumpy terrain. Your youngster should be able to operate the controls during these maneuvers. Now is a good time to make sure your youngster can reach the controls from different body positions. Have the youngster remount. Turn the handlebars full left
and full right. See that this can be done easily. Next have the youngster slide up and back on the seat. Mention that body movement is important. Body movement and shifting weight help to control the motorcycle. (Go through these control exercises with the motorcycle’s engine OFF.)

**Mastering The Controls**

Show your youngster how to use each control as you describe its action. Refer to the owner’s manual to learn control location and function before instructing your youngster. Test yourself by operating the controls. Have your youngster dress in the proper protective gear and sit on the machine as you point out each control. It is important to have your youngster wear all the protective gear whenever sitting on an off-highway motorcycle.
PART 2

BRAKES

Most small off-highway motorcycles have a hand lever on the right handlebar which operates the front brake. Most also have a foot pedal on the right side to operate the rear brake. Refer to the owner’s manual for correct brake location and operation.

Explain and demonstrate proper braking procedure. Be sure your youngster can apply the brake(s) properly while seated and without looking down. Smooth operation should be encouraged.

THROTTLE CONTROL

Explain to your youngster that twisting the throttle control back will make the motorcycle go faster. Closing the throttle control slows the motorcycle.

Youngsters need practice using the throttle control smoothly. They tend to use it like an on/off switch. With the engine off, have your youngster move the throttle to various positions. Practice turning the handlebars and using the throttle at the same time.

ENGINE STOP SWITCH

Explain to your youngster how to use the engine stop switch to turn off the engine. With the engine off, show how the stop switch works. Later, your youngster can practice using the stop switch when the engine is actually running.

CLUTCH/SHIFT LEVER

Some small OHMs do not have a clutch lever; some don’t have a shift lever either. This section applies only to motorcycles with a shift lever. Those that do have a shift lever may have different shift patterns. Refer to your owner’s manual for proper shifting instructions. It is important to learn how the shift lever works.

Explain that it is possible to shift the motorcycle with the shift lever in order to ride at different speeds.
Have your youngster practice shifting with the engine off. The shift lever, clutch lever (if equipped), and throttle control work together to move the motorcycle. When shifting to first gear from neutral the throttle is closed, the clutch lever is squeezed, and the front brake is applied before moving the shift lever into first gear. When starting out, the front brake is released. The throttle is gradually opened while the clutch is slowly released. If the clutch is released too quickly, or too much throttle is applied, the motorcycle may lunge forward causing loss of control. With the engine off, have your youngster practice upshifts, downshifts, and locating neutral.

**SPEED LIMITERS**
*(supervisor control feature)*

Some models come equipped with a removable exhaust restrictor, or another feature which reduces maximum speed. Refer to your owner’s manual or talk to your dealer about this.
Learning Activities

Here are some activities that your youngster can use to help learn about motorcycle parts and controls.

**CROSSWORD PUZZLE**

Here is a crossword puzzle for your youngster to complete.

**Across**
1. What this booklet is all about.
2. A piece of safety equipment for your head that you must never forget to wear.
3. Protective gear for the hands.
4. Where you should always ride your motorcycle. (a synonym)
5. Hand lever you use when shifting gears.

**Down**
6. The place on which you keep your feet when riding.
7. Protective gear for the feet and ankles.

All the words needed are listed below:

<table>
<thead>
<tr>
<th>ACROSS</th>
<th>DOWN</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>6.</td>
</tr>
<tr>
<td>2.</td>
<td>7.</td>
</tr>
<tr>
<td>3.</td>
<td>5.</td>
</tr>
</tbody>
</table>

Answer Guide on Page 41
NAME THE MOTORCYCLE PARTS (Typical)

Have your youngster write the number of the motorcycle part or control on the correct line for the diagrams shown. (Answer Guide on Page 42)

1. Clutch lever
2. Hand brake lever
3. Foot brake lever or pedal
4. Throttle
5. Choke or enrichening device
6. Engine stop switch
7. Gas cap/tank vent
8. Starter (kick)
9. Electric starter (if equipped)
PART 2

LOCATING THE CONTROLS GAME

Now that you have shown your youngster the controls, it is your youngster’s turn to show you. The engine remains OFF for this exercise and your youngster will be on the motorcycle. The youngster should be wearing the proper protective gear to develop this safety habit.

1. Have your youngster show you the location of the following:
   - Brakes (lever and pedal)
   - Throttle Control
   - Engine Stop Switch
   - Shift Lever (if equipped)
   - Clutch (if equipped)

2. Have your youngster show you how the controls work. Be sure he or she understands the proper operation of each control. Skilled use of these controls should develop with practice. Under actual riding conditions the rider will have to watch ahead while operating the controls. Your youngster should be able to find the controls quickly without looking for them.

3. With your youngster looking ahead (pick out a point to look at), have him or her operate the controls. Repeat often while changing the order.

4. Ask your youngster to operate the controls as if actually riding. Look for smooth and precise operation.
PRE-RIDE CHECK

Before you continue:

1. Have you determined your youngster’s readiness to ride an OHM? Do not let your youngster ride if you have any doubt. (Refer to the Readiness Checklist, Part 4)

2. Have you read the owner’s manual and reviewed it with your youngster?

3. Does your youngster fit the motorcycle properly?

4. Have you inspected the vehicle and maintained it according to the owner’s manual?

5. Is your youngster wearing the proper protective gear? Is the mounting procedure correct?

6. Has your youngster learned to locate the motorcycle controls without looking at them? Does he or she know how to operate them smoothly?

7. Does your youngster understand that he or she must always ride off-road?

8. Have you stressed to your youngster to keep his or her feet on the footpegs while riding?

If you have completely covered all these areas, you are ready to go on to Part 3.
Carefully observe your youngster’s first use of the motorcycle. Observe his or her readiness to ride. Only permit your youngster to continue to ride if they have the size, strength, and attitude needed to ride safely.

Show your youngster the engine, exhaust pipe, and muffler. Tell him or her not to touch these parts because they are hot while the engine is running. Explain that they will remain hot after the engine is stopped. Also explain that hands and feet must be kept away from moving parts of the motorcycle.

Your youngster’s safety depends in part on the mechanical condition of the motorcycle. Be sure to inspect it thoroughly before each use. Starting and refueling of the vehicle should be done by responsible adults only. Follow a regular maintenance program. See the owner’s manual for inspection details.

Even after young riders have learned the basic riding skills, direct supervision by an experienced adult is necessary AT ALL TIMES. Make sure that all off-highway motorcycle users under your supervision get proper riding instructions. Stress that an OHM is not a toy. Follow safety precautions strictly to provide a “safety first” approach to off-highway motorcycle riding. Teaching your youngster how to ride an OHM safely will increase the enjoyment of off-highway motorcycle riding.

Learning Area/Riding Area

The best place for learning is a level area 100' x 200' that is free from obstacles such as rocks, stumps, or holes. The learning area may have a loose or hard dirt surface. A grassy surface is also acceptable. It should not have two different surfaces. Under no circumstances should the surface be concrete or asphalt. Be sure there is room enough to maneuver, and that no other riders are close.
PART 3

Getting Used To The Vehicle In Motion

GETTING THE FEEL OF THE BRAKES

Be sure your youngster is wearing all of the proper protective gear. With the engine still OFF, have your youngster mount the motorcycle. If you physically can, push the motorcycle slowly. Have your youngster brake to feel how much pressure is needed for a smooth stop. If your youngster’s motorcycle has more than one brake, both should be applied with even pressure. Practice this several times until you are sure this skill is developed. Remind your youngster to keep his or her head up and look forward.

GETTING THE FEEL OF THE THROTTLE

With the engine OFF, have your youngster practice smooth throttle control. Your youngster will learn how much throttle it takes to start moving in a later exercise. Explain that opening the throttle will increase speed and that closing the throttle will decrease speed. Releasing the throttle and applying the brakes will slow the motorcycle. Ask your youngster to tell you how throttle control and braking affect the motorcycles speed.

GETTING THE FEEL OF THE CLUTCH (if equipped)

With the engine OFF, have your youngster practice smooth clutch control. Have your youngster shift the motorcycle into first gear. While you push the motorcycle have the youngster slowly release the clutch lever. The point which the motorcycle stops moving indicates the clutch engagement point or “friction zone.” The “friction zone” is the point at which engine power begins to be transmitted to the rear wheel. Explain that this is the point the motorcycle will start moving when the engine is running. Smooth operation will prevent stalling and
allow smooth shifting. Remind the youngster that the throttle should be closed when shifting gears. Practice this exercise several times until the skill is developed.

**GETTING THE FEEL OF TURNING**

With the vehicle stopped and the engine OFF, have your youngster practice the proper turning technique:

1. For a right turn, look to the right and lean the motorcycle to the right.
2. For a left turn, look to the left and lean the motorcycle to the left.

Repeat this exercise with the kickstand up as you push the motorcycle. Make sure he or she can turn the vehicle in both directions using this technique while you maintain balance of the motorcycle.
PART 3

BEING PREPARED FOR RIDING PRACTICE

Be sure to observe all the safety precautions covered in the Introduction and Parts 1 and 2. Double check that the riding area is free from hazards. Your youngster should wear all the proper protective gear, and the speed limiter (if equipped) should be installed and working correctly.

STARTING THE MOTORCYCLE

Always start the motorcycle for your youngster. To remember the proper starting technique use “FINE-C.”

Double check for neutral. Start the engine. Have your youngster carefully mount. Let your youngster operate the engine stop switch and shut off the motor. Re-start the engine and repeat. Allow the engine to warm up until it runs smoothly with the choke off.

</tr>
</tbody>
</table>
Let's Start Riding

Walk next to the motorcycle when your youngster first starts riding. You can also let the beginner ride back and forth between you and another adult. Help your youngster with the turns as he or she practices throttle control and braking.

STARTING OUT AND STOPPING

Before your youngster moves the motorcycle under power, take a few moments to practice smooth clutch control. After shifting to first gear, have your youngster rock the motorcycle a few inches back and forth by moving the clutch in and out of the “friction zone.” The clutch is not fully released while doing this. It is important that clutch operation is smooth before riding in the practice area.

The next practice session is straight-line starts and stops. Keep the riding under control.
However, riding too slowly will make balance more difficult. Both brakes should be used together for smooth stops. The left foot should be placed on the ground first, keeping the right foot on the rear brake.

Be sure your youngster develops a good feel for the use of the throttle and controls. After the youngster has mastered starting and stopping at slower speeds, increase speeds by shifting.

**TURNING**

Remind your youngster of the two steps for turning:

1. For a right turn, look to the right and lean the motorcycle to the right.
2. For a left turn, look to the left and lean the motorcycle to the left.

Have your youngster practice turning in both directions at slow speeds. Allow enough room to make a wide turn. After your youngster is skilled in making wide turns, try tighter turns.

**Keep speed slow.**

Your youngster should master these skills at low speeds before going faster. Next, practice some figure eights. This will help your youngster make left and right turns. Make sure your youngster keeps both feet on the footpegs and looks ahead in the turns.

Once these skills are mastered, refer to the Tips & Practice Guide for the Off-Highway Motorcyclist for additional skills used in off-highway riding.
PART 4  READINESS CHECKLIST

This Readiness Checklist is provided to help you determine your youngster’s readiness to learn to safely operate and control an OHM. There is a significant amount of judgment needed in determining a youngster’s readiness to ride an OHM. The ultimate decision is the responsibility of the parent, guardian, or supervising adult. It is important that parents make informed decisions about whether or not their youngster becomes involved in off-highway motorcycle activity.

There are four developmental areas considered in the Readiness Checklist. These include: visual perception/motor development, physical development, social/emotional development, and reasoning and decision-making ability. Several questions are listed to help you determine if your youngster possesses the skills and capabilities to safely learn to operate an OHM.

The best way to utilize the Readiness Checklist is to read the particular ability, consider the answers to the questions for that ability, and check those abilities that you determine are present in your youngster. There are no suggestions as to how many abilities or the degree of ability that your youngster should possess. This Readiness Checklist may help you consider the appropriateness of OHM operation for your child. The ultimate decision for your youngster’s involvement with off-highway motorcycles belongs to you, the parent.
VISUAL PERCEPTION/MOTOR DEVELOPMENT

**Ability**

1. Youngster can see with sufficient clarity.

2. Youngster possesses ability to perceive depth or distance.

3. Youngster has adequate side vision/peripheral vision.

4. Youngster can judge the speed of objects.

**Points to Evaluate**

- Can youngster see letters and numbers at least as well as you?
- Can youngster distinguish colors?
- Has youngster demonstrated adequate vision in other activities (riding bicycles, running, sports, or other recreational activities)?
- When looking at two objects in the distance, can youngster tell which is farther or closer?
- Can youngster see objects 90 degrees to each side while looking straight ahead?
- Does the youngster judge the speed of objects (fast, medium, slow) that agree with your judgments? (For example, a car on the highway, a train moving past a crossing, a dog running, people walking.)
**Points to Evaluate**

1. Can youngster tell how many feet or yards it is from the house to the road?
2. Can youngster tell how wide a hallway is, or the width of a room?
3. Can youngster follow the path of such things as: a hit or thrown baseball, a moving car, objects in a video game?
4. Can youngster estimate distance between objects in a family photograph?
5. Can youngster estimate distance between objects when looking at a landscape picture?
6. Can youngster dribble a basketball without looking at it?
7. Can youngster manipulate video game controls while following objects on a screen?
8. Can youngster describe a minor injury he or she received and correctly describe the causes?
9. Can youngster describe settings or situations that can produce injury if precautions are not taken?
Ability

10. Youngster can concentrate on more than one element at a time in solving a puzzle or problem.

11. Youngster can maintain relative spans of attention when given a variety of stimuli.

Points to Evaluate

- Can youngsters describe what may cause injury when doing such things as running, swimming, bicycling, riding in a car?
- Can youngster pick out or describe several items within a picture?
- Can youngster assemble a puzzle without unusual problems or delays?
- Can youngster describe what to do if a house fire should occur?
- Can youngster complete school homework assignments without being easily distracted?
- Can youngster assemble more difficult puzzles; for example, a nature scene or picture?
Ability

1. Youngster can sit comfortably on the motorcycle and reach the controls easily.

2. Youngster has sufficient strength and familiarity to operate the controls with ease.

Points to Evaluate

- Can youngster place his or her feet firmly on the footpegs?
- Do the youngster’s fingers reach comfortably around the handlebars and control levers? How about with the handlebars turned? How about in different seating positions?
- Can youngster stand (with knees slightly bent) and have a few inches of space from the seat?
- Can youngster easily reach the foot controls?
- Can youngster dress with proper protective gear including putting on helmet and fastening the chin strap?

While sitting on the vehicle, can youngster:

- Squeeze the hand controls?
- Operate the shift lever (if equipped)?
- Operate the choke and fuel valve with ease?
- Press the brake lever with sufficient pressure
- Operate the controls without looking at them?

SOCIAL/EMOTIONAL DEVELOPMENT

**Ability**

1. Youngster can understand and follow rules.
   ✓

2. Youngster generally will obey parents and supervisors.
   
3. Youngster controls behavior according to expectations?
   
**Points to Evaluate**

- Does youngster follow rules established at home?
- Do teachers say that the youngster follows rules?
- Does youngster listen and respond to adult supervision?
- Does youngster comprehend the importance and seriousness of having rules and regulations?
- Does youngster avoid challenging authority or rebelling when rules are imposed?
- Does youngster show evidence of self-control...doesn’t get easily frustrated or upset?
- Does youngster understand consequences associated with certain actions (like not wearing a safety belt in the car)?
- Does youngster think about results before performing some action (like crossing the street, hitting or throwing a ball)?
### Ability

4. Youngster understands other youngsters may be permitted to do what he/she may not be allowed to.

5. Youngster can give reasons and/or solutions to problems seen in the environment.

6. Youngster can make decisions based on reality and not fantasy.

### Points to Evaluate

- Does youngster recognize unsafe actions of other youngsters?
- Does youngster appreciate being safer than others?
- Does youngster accept rules that are more stringent than what other youngsters have to follow?
- Can youngster explain how land (or grass) gets worn?
- Can youngster explain how even small damage to land can take years to recover?
- Can youngster distinguish between untouched land and used land?
- Can youngster complete a task in a step-by-step fashion (assemble a toy, clean a room)?
- Does youngster comprehend real injury as opposed to “cartoon” injury?
- Does youngster respond with logical solutions when asked to solve a problem?
PART 4

REASONING AND DECISION-MAKING ABILITY

**Ability**

1. Youngster comprehends that interaction with others and things can result in injury.

2. Youngster has a basic understanding of what being careful means.

**Points to Evaluate**

- Can younger describe how and why a person received physical injury or pain?
- Does youngster notice impending accidents or potential injury-producing events, such as in sports activities or bicycle riding?
- Can younger explain why it takes distance to stop?
- Can younger explain how moving at even low speed can result in injury if stopped suddenly or by hitting something?
- Does younger know why rules are established?
- Does younger notice or recognize others being careful in action-oriented activities?
- Does younger notice professional athletes use protective gear as part of their sport?
Ability
3. Youngster understands that rules are made to reduce injury and provide long-term enjoyment.

4. Youngster has basic understanding of the physical limitations of stopping and turning.

Points to Evaluate
☐ Can youngster explain the reason for rules at home or school?
☐ Does youngster understand the value of prevention?
☐ Of wearing protective gear?
☐ Can youngster recognize that not following rules can eliminate future fun and enjoyment?
☐ Can youngster explain what may happen if moving too fast while going around a curve on a bicycle? On a skateboard? On an off-highway motorcycle?
We hope this booklet has helped you and your youngster take a “safety first” approach to off-highway motorcycle riding. All off-highway motorcycle riders must use good judgment and be responsible. It is up to YOU to set a good example about motorcycle safety. You must help your youngster ride sensibly and safely at all times.

After your youngster has mastered the riding skills in this booklet and has matured to a higher level of skills, he or she may be ready to practice more advanced riding. The Motorcycle Safety Foundation’s *Tips & Practice Guide for the Off-Highway Motorcyclist* booklet provides information about riding on hills, riding across slopes, and other more advanced skills. Youngsters should have a good understanding of riding skills before using unfamiliar areas. They should ride on flat areas, gentle hills, and gradual slopes. Be sure that your youngster rides slowly over unfamiliar terrain to locate and avoid bumps, holes, and other possible hazards. You should check the area first.

The Motorcycle Safety Foundation also recommends a video program, *The MSF DirtBike School: Learn to Ride Safely*. It demonstrates and discusses responsible riding practices.

It is also recommended that you and your youngster read the information in the owner’s manual. To find out more about rider education and off-highway motorcycle safety programs offered, or to order the video or publications, contact the **Motorcycle Safety Foundation at 2 Jenner, Suite 150, Irvine CA 92618, 949.727.3227 or visit dirtbikeschool.com**
**BRAKES** - The parts of a motorcycle which allow the operator to slow down or stop the machine.

**BRAKE LEVER** - The hand brake located on the handlebar.

**BRAKE PEDAL** - The foot brake which is operated by the right foot.

**CABLES** - Heavy insulated wires. There are two kinds: mechanical and electrical. Brake cables are mechanical. The headlamp cable is electrical.

**CARBURETOR** - Device which provides the engine the proper mixture of fuel and air.

**CHOKE** - A device which enriches the mixture of gasoline and air supplied to the engine for cold engine starting.

**CLUTCH LEVER** - The hand lever used to disengage the clutch when changing gears.

**DRIVE CHAIN** - The chain which connects the engine to the rear axle to give a motorcycle motion.

**ENGINE STOP SWITCH** - Switch used to stop the engine without removing the hands from the handlebars.

**EXHAUST** - Leftover gases from the combustion process that come out of the tailpipe when the motorcycle engine is running. Exhaust contains deadly carbon monoxide gases.

**EYE PROTECTION** - Goggles or a shatter resistant shield worn over the eyes while riding to protect against dust, flying insects, or other debris. Such eye protection, when tinted, may be effective against bright sun or snow-glare conditions.

**FINE-C** - A pre-start routine. A way to remember the pre-start routine:
- **F** - Fuel valve on
- **I** - Ignition on
- **N** - Neutral
- **E** - Engine stop switch in run position
- **C** - Choke

**FOOTPEGS** - Pivoting pegs on which a motorcycle operator should keep his/her feet while riding.

**FUEL VALVE** - A valve, usually hand operated, with an on, off and “reserve” position. Controls gasoline flow to the carburetor.
HANDLEBAR - The metal bar attached to the front end of the motorcycle that turns the front wheel for steering. Many of the controls for the motorcycle are located on the handlebar.

HELMET - The most important protective clothing to be worn when operating a motorcycle. It covers the head and helps protect against skull fracture or brain injury in an accident.

OFF-HIGHWAY or OFF-ROAD VEHICLE - Any vehicle, including off-highway motorcycles and ATVs, which is restricted by law from operating on public roads.

OHM - Off-Highway Motorcycle

PSI - Refers to air pressure in the tires and stands for “Pounds per Square Inch.”

READING THE TERRAIN - Looking well ahead while riding, anticipating hazards.

SHIFT LEVER - On those motorcycles equipped with a shift lever, it allows the operator to change gears. The shift lever is operated by the left foot.

TAILPIPE - That part of the exhaust system which expels waste gases.

THROTTLE - The control operated by the right hand which controls the engine speed.

TRACTION - Tread friction between the ground and the tires.

TRANSMISSION - Mechanism used to transmit power from the engine to the wheels.
CROSSWORD PUZZLE

ANSWERS

1. SAFETY

2. HELMET

3. GLOVES

4. OFF ROAD

5. CLUTCH

6. B

7. O

8. G
ANSWERS

NAME THE MOTORCYCLE PARTS (Typical)

1. Clutch lever
2. Hand brake lever
3. Foot brake lever or pedal
4. Throttle
5. Choke or enrichening device
6. Engine stop switch
7. Gas cap/tank vent
8. Starter (kick)
9. Electric starter (if equipped)
