

Designed for Fitness Trainers.

Made for Anyone Needing a Professional Easy to Use Wireless Microphone System.

The EVO is a 15 channel UHF frequency dual ear headset mic that incorporates both headband and wireless transmitter into one compact, self-contained ergonomic design. The rechargeable mic is both splash and sweat resistant. The EVO offers a patented behind the ear design that allows freedom of movement, eliminating both cable and body pack by relocating the transmitter behind the ear on the headset for easy, carefree fitness instruction that never interferes with floor exercises.

The EVO is lightweight, comfortable, and stays in place even during the most rigorous exercise routine. The EVO Wireless Headset features a flexible gooseneck mic boom with noise-canceling, Bi-directional condenser mic element, enabling exercise instructors to project their voice clearly while reducing external ambient noise or music interference. The EVO also features an LCD Display, On-Off Power / Channel Buttons, and is powered by a 3.7V 450mAh Lithium-Polymer Battery, with Built-in USB-C charging input. The EVO Wireless headset mic provides up to 4+ hours battery life, USB-C cable, and power supply included for recharging.

Pairing the EVO with the pocket-sized EVO-PREC wireless receiver brings professional features together with dependability and ease of use to deliver a system that's equally comfortable at entry level or operating alongside larger install systems. The EVO-PREC receiver features one 1/8" Mic output and one 1/8" Line output, LCD displaying Batt level, Channel, and Signal, built-in a 3.7V 1100mAh Lithium-Polymer Battery, Mini USB-C Charging Input, and two diversity antennas.

EVO Headset Mic System

- Patented Headset Design Integrates the Transmitter Comfortably Behind the Ear
- 300 Foot Range
- 15 Selectable UHF Frequencies
- Wire Free Headset
- Splash Resistant/Sweat Resistant
