

SUPERIORE

SUPERIORE, made for North America,
inspired by Italian design.

Like father, like son.

Welcome to Gualtieri, the heartbeat of Emilia Romagna, a lively Italian Region of excellence and tradition, with its celebrated cuisine and extraordinary heritage of art everywhere you look, and its advanced engineering. A generous land, able to impart the genes of diligence and creativity that animate the Motor Valley, cradle of two and four-wheeler legends. Despite its industrial disposition, it is a Region that keeps a vital connection with the countryside, where small farms and large corporations dominate the food business.

Emilia Romagna strikes the perfect balance between productivity and joyfulness. Here everybody works hard, but still has the energy for a lively nightlife of dining and socializing, until late, at any age. This blend of elements creates the perfect alchemy, also expressed by the fact that the distance between passion for cooking and the art of cooking appliances is a short one.

Like any story worth telling, let's start from the beginning...

A stroke of inspiration that became a love affair.

In 1952, the brilliant and inventive Contini brothers had a little workshop on the banks of the Po River, in Gualtieri. Barely twenty years old, they had a passionate vision: the Mobilfornello, an unconventional device that brought together a cooktop and a propane tank compartment into one body.

At a time when local competition was limited to small cooktops, the Mobilfornello set a new standard and launched the rise of TecnoGas. It was a simple and brilliant idea, a functional product with a decorative, iconic shape, the perfect example of form and function harmoniously expressed in one distinctive appliance.

Following in the footsteps of our founders, we continue to build enduring, handcrafted systems with care, perfect for cooking and always sporting an innovative aesthetic twist. This is the business card that we like to put forward, based on a true story, a coming together of burning passion and cutting edge technology.

Gianni
and Giorgio Contini

The Mobilfornello

Spontaneously born strong.

Tecnogas is a strong company, with its roots in the countryside. It has a history made of ideas, and today, like 65 years ago, it draws its lifeblood from the beauty of its places of art. Its technological passion is driven by the talent of master engineers and the artistic care of the hands of experts.

A perfect chemistry of reason and emotion, of respect and pride for the land that we live in. A modus operandi and vision inspired by the age-old ingredients of love for well-made objects, the art of handcrafting and first quality materials. This is traditional manufacturing at its best.

Our work and our appliances are made from the same mold as the environment, creating products that are good for cooking and good for the Planet. An extremely limited use of plastic makes 99% of our materials recyclable. We employ highly efficient gas burners or, in the case of electric, the best induction elements. Our products and our manufacturing processes represent Tecnogas' pledge to Mother Nature. We live in the countryside, and therefore know why this commitment is important.

Our cooking expertise comes from the intense connection we have with the local rural community. We take pleasure in quality food, together with our families and friends. Whenever possible, we eat local products, which we cook ourselves.

Our aim is for our appliances to serve our customers in this same spirit.

First man, then machine.

The work of the men who today are the invisible protagonists of SUPERIORE is the legacy of our founders. The environment inspires our workforce to feel their roots in our land and its values, like many of our R&D specialists who, besides being great engineers, are also great cooks. Our key staff are examples of instinct, passion and science. Animated by this human and visionary spirit, SUPERIORE encourages freedom of creative expression in its designers, to freely express themselves rather than limit them with marketing constraints.

This is why every product has that human touch, from the first draft to the last weld, and always delivers the same character. We call it “strong design”, a concentration of engineering design, sound shape and unmistakable appeal.

This is SUPERIORE, a core of creative men who love what they do, where they do it, and how they do it. With their hands, their hearts and the help of the best technology, so that even the most ambitious dreams become reality, building together, sharing knowledge.

When you choose a range, keep your head cool.

A collection of first class products, distinctive for both performance and style, SUPERIORE is our very best in technology and cooking know-how, the result of the experience of Tecnogas.

Every SUPERIORE appliance delivers serious cooking features with an Italian flair. Even the most discerning customers can experience in their own homes the emotions of a professional chef and the pride of an inspiring and unique masterpiece.

An image that reflects bold design and puts the focus back on the quality of the materials with Italian-style handcrafted finishes.

The NEXT generation, today.

Substance and contemporary style come together in the NEXT range, which sets itself apart with its exclusive iconic style.

NEXT pays tribute to our Motor Valley with an instant classic piece, rich in details that turn a classic item such as the range cooker into an avant-garde creation. Details like the metal knob grooves, inspired by engine gears, are shaped to give a “technical tactile feel”, delivering a subtle emotion at all times.

An unparalleled piece for style and functionality.

Stylish, recognizable Tecnogas SUPERIORE design, harmonious expression of eclecticism incorporated in one unique hood. Contemporary with a touch of high-tech thanks to its black glass, professional for its stainless steel thick shape and surprisingly retro at first glance for its analog control gauge.

Stylistic solutions, materials and sophisticated details, matched with convenient functions such as the automatic shut-off option, that cleans the kitchen air with selected timing and speeds. All this is able to offer the unparalleled NEXT hood, that can also work manually with its 600 cfm of ventilation capacity.

Up close and personal.

DECO is captivating, with its traditional style and inspiration from the last century Italian art. An updated stylistic reinterpretation thanks to the appealing combination of four textured matte colors paired with the equally refined accents of the cast metal knobs and handles. Like every Tecnogas SUPERIORE product, DECO is an expression of functional design and versatile power, from the burners in different diameters to the classy details of the hoods, where ventilation capacity meets the power of design.

A suite to fulfill aspirations.

Clean lines, robust materials and a refined colors palette: this is LA CUCINA's essence, the SUPERIORE line for those entering the premium grade appliance category, to fulfil their aspiration for iconic style and first-class performances.

LA CUCINA Line

Hood: HP301SSS
Range: RL301GPS_S_
Dishwasher: DL2412SS

A cutting edge color palette
for those who dare.

Look beyond the ordinary. Eight color hues, inspired by the Motor Valley vibe for racing, paired with four unique finishes.

These colors' alchemies are composed and applied by the same body shops and with the same techniques used to paint the sport cars and motor bikes manufactured in the Valley, that will make the range the star of the kitchen.
