

TSG-Compliant Logitech USB Web Cam

Connecting with your team means more than just a phone call. Full collaboration includes video at the desktop and we help you do it securely.

Benefits

Complies with TSG guidelines for peripherals for use with CIS Secure USB Positive Disconnects

Flexible mounting clip fits laptops and external monitors

Clear, crisp high definition video with auto light correction

Provides seamless functionality with collaboration applications

Product Overview

With the rise of powerful collaboration tools like Microsoft Teams, Cisco Webex and Zoom, government organizations are more reliant than ever on these apps to maintain connections between stakeholders in distributed locations across the country and the globe. The biggest challenge for a distributed workforce is identifying ways to enhance the communication between team members. Introducing video to team interactions from the desktop is a great way to optimize these interactions, but it is critical to be able to do it securely. The CIS Secure DTD-C920-CAM-01 delivers the security you need to ensure that your web cam can't be viewed subject to unauthorized access when you are not using it for video conferencing.

The DTD-C920-CAM-01 is based on the Logitech C920s and delivers Full HD video (1080p at 30fps) with Logitech's auto light correction technology. CIS Secure enhances the C920s by modifying it to be compliant with the TSG guidelines set forth by the National Telecommunications Security Working Group (NTSWG) for using a web cam with a CIS Secure TSG-approved USB Positive Disconnect device. The use of approved peripherals like CIS Secure's web cam and headsets with our Positive Disconnect allow our customers to be confident in enabling a rich collaboration experience with the level of security they require.
