<p><i>1 Total THC content calculated by the sum of D9-THC and 87.7% THCA / 2 Total CBD content calculated by the sum of CBD and 87.7% CBDA</i></p> <p><i>*0.877 is a ratio of molecular masses; specifically, that of THC divided by that of THCA. Multiplying the amount of THCA by 0.877 and adding the amount of already "active" TH represents the maximum amount of THC remaining after complete decarboxylation.</i></p>
