

# Cleaning your lumasol

Our products consist of two primary components; the vial and the engine. We know you take your lumasol everywhere you go, so we want to help you make sure it stays looking as good as new! It can get dirty, sandy, wet, and whatever else you can manage. So, to make it slide smooth and shine bright again, follow these four easy steps:

1. Twist off the cap
2. Remove vial and brush off any loose dirt
3. Gently rinse off the engine, use soap if necessary
4. Pat dry, replace vial and cap, and enjoy!

## Tips

- Avoid harsh cloths, brushes, paper towels, and materials with similar texture – anything sharp or rough can scratch the surface.
- Be sure to pat dry; excessive rubbing can reduce the effectiveness of UV responsiveness.
- Keep liquids from entering the vial to avoid formula contamination.
