

MODEL R & RV

MODEL RV SMALL DIAMETER TYPE B GAS VENT

Selkirk RV round vent pipe is a Listed Type "B" gas vent pipe. Lengths available range from 6" to 5' feet. Its adjustable fittings and standard short lengths eliminate all cutting, fitting and special engineering. An improved joint design provides for a rapid and secure connection in seconds. The use of our "LockTab®" feature gives installers the option of engaging this tab instead of using sheet metal screws.

LockTab Feature

Our exclusive LockTab feature was developed as an alternative to the use of sheet metal screws to secure gas vent sections. In many areas of the U.S., the use of sheet metal screws is either a commonly accepted practice or a local requirement. The use of 1/4" sheet metal screws is expensive and time-consuming for installers. The use of our new Lock-Tab feature gives installers the option of engaging this tab instead of using sheet metal screws.

To use the LockTab feature, RV Gas Vent sections are assembled in the usual manner, then the LockTab is depressed with a thumb or blunt object like a screwdriver into the lock channel of the male end of our pipe. To disengage the LockTab, pry it up using a screwdriver or knife blade.

The LockTab does not affect the functionality of our current RV lock system. The decision to use or not use the LockTab feature is totally optional.

To use the LockTab feature:

The Locktab is located on the female end of the gas vent.

Assemble the gas vent sections.

The Locktab is then depressed with a thumb or blunt object such as a screwdriver into the lock channel of the male end.

To disengage the Locktab, pry it up by using a screwdriver or knifeblade.

MODEL R LARGE DIAMETER TYPE B GAS VENT

Why Selkirk Model R?

Lightweight

We keep the connections clean to reduce the weight of the pipe making installation a SNAP (Snap-Lock that is).

Smaller footprint

Clean connections coupled with a 1/2" air space tighten the diameter of the pipe to create a solid connection suitable for tight spaces.

Easy to connect

Model R's snap lock coupling system creates a secure, confident connection. Simply align the seams, twist, and SNAP – ready to go!

Backed by an exceptional warranty

We are so confident in Selkirk Model R's ability to satisfy, we've backed it by the industry's finest warranty, the Smart Choice Warranty.

Model R is to be installed in single and multi-story buildings in accordance with the following Natural Gas & Propane Codes:
USA: NFPA 54
CANADA: CAN/CSA B149.1 & .2

Selkirk Model R is accepted by: AGA, NFPA, HUD, NBC, UBC

Selkirk Model R Large Diameter Type B Gas Vent was designed with the installer in mind and to endure the elements. Lightweight construction with a small footprint, Selkirk Model R will deliver when space is tight but performance is essential. Easy to connect and assemble, you can count on a secure fit when installing Selkirk Model R.

Selkirk's Model R Type B Gas Vent is listed and approved by UL for residential, commercial, and industrial applications. Selkirk Model R provides a continuous passageway from a Category 1 gas appliance, such as water heaters, boilers, and furnaces, to the termination of the vent above the roof of a structure.

Some of the safety features within Model R includes:

- Double wall construction with 1/2" air space
- Clearance to combustibles standards of:
 - 1" in the United States for all diameters
 - 1" in Canada for diameters 10" to 24"
 - 2" in Canada for diameters 26" to 30"
- Galvanized steel outer wall construction for exceptional corrosion resistance *exterior applications must be painted in Canada*
- Aluminum inner wall construction to keep flue gases hot
