**Installation**
1. Insert 4pcs “AA” batteries into the battery compartment according to the diagram indication.
2. Open the container lid. (Figure 2)
3. Fill in liquid. (Figure 3)
4. Turn on switch.
5. Put your hand under the sensor 0~7cm to let the dispenser starts working (Please repeat this action several times till the liquid comes out when the first time use.). (Figure 4)

**Liquid Dosage Adjuster**
1. The liquid dosage can be adjusted from 1.0~5.5mm by power switch.
2. Turn on the power switch and turn to the end of the underside, the liquid dosage will be flowed out more and more.

**If Dispenser Doesn’t Work**
1. Check the battery if it is weakness or not at the right location.
2. Power switch turned off.

**If Dispenser Doesn’t Drip**
1. Please operate dispenser several times till the liquid comes out when the first time use.
2. The liquid will be congealed possible in winter in cold city, try to operate it several times, if still can not, pour the liquid out then put in some warm water and operate the dispenser till the water comes out. Do clean the container then refill in liquid after that.
3. The container hole was jammed by solid particles, pour out liquid and wash the container then refill in liquid.

**Attention**
1. Please choose a level tabletop to put on the dispenser.
