

Texa IDC5 Plus Cable selection:-

The software shows which cable is required for the bike you wish to connect to.

To view this information, simply select the make and model of vehicle, then click on the button to the right of the diagnosis type selection.

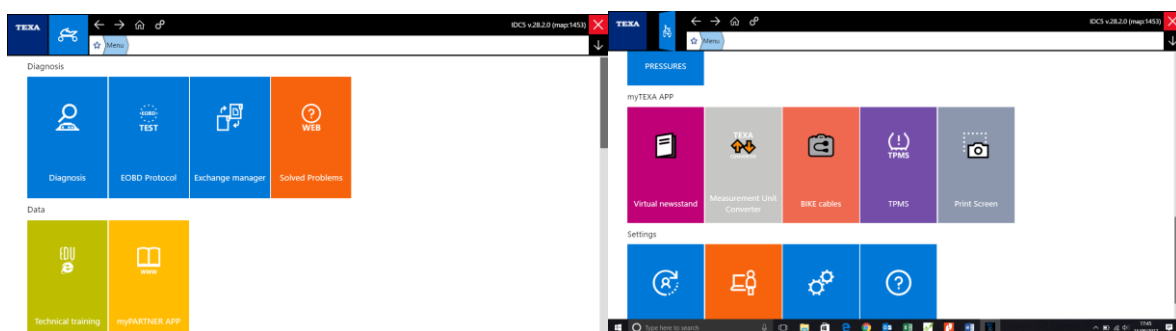

The screen shows the cable required and usually a video with connector location on the vehicle.

When ready to proceed simply click the green Tick box.

There is also a new app accessible via the software listing cables by connection or model. We generally will aim to have this activated prior to despatch, however if not, you can install this app via the software.

To install and use this app, from the home screen, scroll down to the Apps section.

Click on Bike cables App and follow the instructions to install.

Within the app you can list cables by brand or choose by cable part number to see which models that cable suits.

Press the + button to add the cable to your list which can be used to keep track of cables you have previously ordered or use it as a wish list, whichever suits your needs.

 ✓ AVAILABLE IN THE PRICE LIST
 ✗ OUTDATED CABLE

Complete DUCATI cable compatible with the 4-way socket installed in the latest generation models such as Multistrada 1200, Diavel, Panigale and Scrambler. This cable can also be used on the Monster and Hypermotard models equipped with a Continental control unit and on the DTC Dynamic Traction Control system.
 NOTE: Starting from the Diavel model, the ABS system can be diagnosed using the 3151/AP23 cable. For the models produced previously (including the MULTISTRADA 1200 ABS M.Y. 2010), the ABS can be diagnosed using the main 3151/AP01 cable.

You can also view cables by brand.
