

Installing Your E-Cig Drip Collector Tray

The E-Cig drip tray includes 4 'J' hook tabs on all 4 corners of the drip tray. Align the 'J' hooks on the drip tray with the inlet grill of the air cleaner. Make sure all four "J" hooks line up with a square opening in the inlet grill.

(View from inside the unit.)

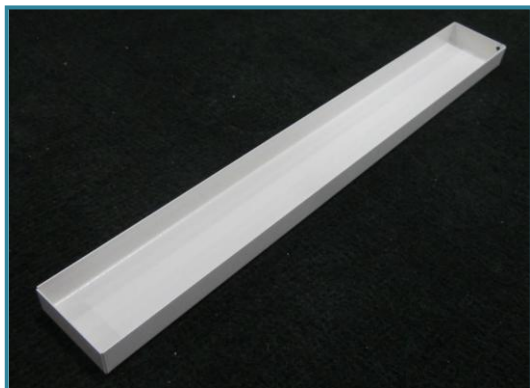

(View from inside the unit.)

Shift the drip tray over so that the 'J' hook will hook onto the inlet grill and lower the drip tray in place.

Drip Tray Collector Removal for Cleaning

As the specially designed electronic cells accumulate vapor condensation, the moisture will drip into the collection sleeves and finally settle into the removable collector tray. The collector tray should be cleaned at regular intervals. To remove the tray for cleaning, rotate the metal turnstyle to the down position.

The drip tray can now be pulled out.

Clean drip tray collector and insert back into the drip tray.
