

WatchDog Hanging Kit

1. First, choose the area that you would like to install the hanging kit. You will need a distance of 32 inches between the right and left side. Mark the spots where the eye hooks will go with each side matching up with the position of the legs.
2. Once marked, mount the eye hooks.
3. At this point, you will need to remove the adjustable legs on the dehumidifier, and set the unit on the ground.
4. Now you're ready to slip the straps of the hanging kit under the dehumidifier, lining the straps up with the legs.
5. Once the straps are lined up, carefully screw the legs back onto the dehumidifier. *NOTE: Hand Tighten Only*
6. After the legs are tightened, carefully lift up the unit and attach the safety hooks of the straps to the eye bolts, ensuring that the strap cam is facing towards you.
7. Adjust the tension of the straps until there is tension on all four corners.
8. To adjust the height of the dehumidifier, pull downward on each strap, while supporting and lifting the unit slightly with the opposite hand. Continue to adjust the straps until the desired height is reached. Ensure unit is level- left to right and front to back.
