# Care guide

**Ficus**

## When your plant arrives

Remove the plant from the box, water if the compost feels dry and place where it is to grow.

## How to care for Ficus

Water with care, allowing compost to dry a little in between waterings. Give very little water during the winter.

Mist regularly. Feed with a weak fertiliser solution if needed. Repot Ficus if they grow too big.

## Where to place Ficus

Place in a conservatory or most rooms, whether bright or in partial shade. Avoid draughts and radiators. Make sure the temperature does not fall below 13°C.

## Possible problems and how to solve them

Loss of leaves is often caused by overwatering or too little light.

## General care advice

Wipe leaves to remove dust and mist regularly throughout the year.
