Care guide

Philodendron

When your plant arrives

Remove the plant from the box, water if the compost feels dry and place where it is to grow.

How to care for Philodendron

Keep compost moist over the summer and just moist the rest of the year.

Don't allow Philodendron to sit in water. Mist leaves over the summer and during the winter months if kept in a heated room.

Where to place Philodendron

Place in a light or partially shady room but avoid direct sunlight. Keep out of draughts and away from radiators. Make sure the temperature does not fall below 13°C.

Possible problems and how to solve them

Leggy growth and small pale leaves are possibly caused by too little light. Brown and papery edges to leaves can be caused by dry air, something that can be relieved with misting.

General care advice

Wipe leaves to remove dust and mist over the summer months and in winter if kept in a heated room.
