Description

VALVE is an all-tube boost pedal (no silicon involved) operating in starved-plate and starved-heater mode, which is difficult to pull off. Most attempts (Matsumi) fail due to excess grid current at such low bias. This new design solves those issues, breathing life into the tube, achieving full bandwidth and performance, all while maintaining that gooey non-linear tube goodness. This pedal will warm up your tone like nothing else. Destined to be your always-on pedal. Works great on bass too!
