Description

The COMPRESSOR is a boutique all-analog vacuum tube pedal designed to offer the most transparent compression available, combining great sustain and low noise operation. Its feed-forward side-chain and custom opto-resistive attenuation produces a soft knee, as opposed to hard limiting, providing a very natural presentation without pumping effects. This will be your always on pedal. And with tons of clean headroom, you can use it on vocals too.

This is not a clone or copy of a vintage design; it is new from scratch using the best materials and components available, including metal film resistors and polypropylene capacitors. A built-in low noise boost converter provides high voltage for proper tube bias and operation, insuring maximum performance. A high-current +9V wall wart is included.

Specifications

Item	Specification
Gain	15dB
Compression	15dB
Tubes	1 x 12AU7
Controls	Knee, Level
Size	4.0" x 5.0" x 4.5"
Input Power	120V/240VAC (universal), 4W

Operation

As with all tube amplifiers, COMPRESSOR takes approximately 30 seconds to warm up and start working.

Warnings

Do not spill liquids onto pedal. If this happens, immediately unplug unit from power supply. Remove tube, then rinse or soak assembly in 91% isopropyl alcohol for several minutes (up to an hour if the beer had dried). Allow 24 hours to dry.

Do not use a standard negative 9V pedal power supply. This unit uses positive 9V and also requires high current (500mA).
