

Xtreme Mats Under Sink Cabinet Mats have a flexible, but sturdy edge that can be removed for a tight fit.

- You have the option to trim off the edge which will remove 1/4 inch on each side, for a total reduction of 1/2 inch overall.
- To achieve this, we recommend using heavy-duty scissors or a razor blade to cut the edge.

*However, it's crucial to note that the side walls of the mat should NOT be cut. Cutting the walls will cause the mat to be defective and incapable of containing water. Note any modifications made to the mat will not be covered under warranty.*
