# TOYOTA GR SUPRA

At a glance...

- TIG-welded from T304 stainless steel
- Stock catalyst and GPF can be retained (MOT compliant)
- Single, Twin and Non-Valved configurations available
- 4.5in/114.3mm sports catalyst downpipe opens door to ECU remapping and further engine tuning
- Turbo Back setup primarily focuses on tuning market with optimal flow rates

## Establish yourself in every environment.

After making JDM fans wait 17 years for their favourite sports car to return, there was a lot of pressure on Toyota to ensure the fans weren't disappointed. The recipe has remained the same, a rear-wheel drive coupe with an excellent chassis and the highly tuneable B58 6-cylinder engine.

The well proven straight-6 makes the GR Supra a tuners dream, however the standard exhaust limits the performance and soundtrack of the glorious straight-6 powerplant.

“  
**Cobra Sport’s all-new performance exhaust range unlocks a new level of involvement, by combining unrivalled sound with jaw-dropping looks and optimal performance gains.**  
”

# AUDIBLE EMOTION

## +16dB

**Venom GPF-Back**

Engine at idle: 66dB (+8dB)

Static 4,000rpm test: 101dB (+16dB)

The TIG-welded performance exhaust adds a new level of engagement by offering unrivalled sound and performance.

**EXPERTLY ENGINEERED FOR  
OPTIMAL PERFORMANCE**

Cobra Sport's development team have developed an extensive range of performance exhaust systems, that not only add a new level of sound, but also adds performance – catering to the needs of any GR Supra owner.

Cobra Sport performance exhausts transform your drive, delivering an exhilarating experience every time you get behind the wheel.

**PERFORMANCE EXHAUSTS**  
ZERO COMPROMISE

All Cobra Sport exhausts are manufactured in the UK from certified grade 304 stainless steel and TIG welded for a superior quality finish.

# PRODUCT OPTIONS

- Stock catalyst and GPF can be retained (MoT compliant)

- Single, Twin and Non-Valved configurations

## LIFETIME WARRANTY

All Cobra Sport exhaust systems come with a lifetime warranty for the original purchaser, giving you ultimate peace of mind.

## UK MANUFACTURED

All Cobra Sport stainless steel exhaust systems are manufactured in the UK.

## TIG WELDED

All Cobra Sport exhausts feature tungsten inert gas (TIG) welding rather than metal inert gas (MIG) which is employed by many competitors in the performance aftermarket.

## Non-Valved Venom GPF-Back

The most outrageous upgrade whilst retaining the Gaslone Particulate Filter injects the GR Supra with venom, delivering the biggest increase in sound courtesy of a non-valved system which removes the rear silencer for the biggest increases in sound levels and audible emotion whilst retaining emissions compliant.

Idle - 66dB (+8dB) | 4000RPM - 101dB (+16dB)

## Valved GPF-Back

Available with a single or twin valved setup, the valved GPF-Back offers a jekyll and hyde personality, adding tone and bass on backroads whilst enabling you to cover motorway miles in total tranquility.

Idle - 65dB (+7dB) | 4000RPM - 91.7dB (+6.7dB)

## Valved Cat Back

By removing the restrictive GPF (Gasoline Particulate Filter), the valved Cat Back unlocks the perfect middle ground of aggression and driveability, enhancing the factory mapped pops and crackles, whilst keeping the standard catalyst in place, offering significant increases in sound levels throughout the rev range.

## High Flow Downpipes

### Configuration options:

- 200-cell 4.5"/114.3mm sports catalyst
- De-Cat

## Valved Turbo Back

The most extreme upgrade, designed for tuners who are adding attitude and pushing the most amount of power from their GR Supra.

With a choice of 4.5"/114.3mm 200-cell high flow sports cat or de-cat options for the ultimate upgrade in-terms of exhaust gas flowrates; optimising performance and delivering unrivalled sound levels and aggression.
