Advanced Ear Microphone

Stylish lapel microphone
Twist & Lock™ earpieces
Reliable 4mm cable
Crystal clear audio
Patented design
OH&S friendly

WIRELESS PACIFIC™

Choice of earpieces

The Ear Microphone that saves you money

Wireless Pacific's professional iTRQ advanced ear microphones are designed to allow you to leave the whisper clear microphone harness permanently attached to the radio and simply swap earpieces when users change shifts. The patented twist and lock 2.5mm earpiece connection eliminates wear on the radio's accessory connector, hence improving long term reliability and reducing long term radio maintenance costs.

The patented design allows you to save money while satisfying duty of care OH&S compliance. When personal issue costs exceed your operational budget you can choose to just buy one iTRQ accessory per radio and then choose from a variety of inexpensive, comfortable earpieces to suit the personal preference of every staff member. Personal issue of earpieces is not only essential for hygiene, and occupational health and safety compliance but helps increase user accountability and keeps team morale high.

When you need to talk, you can count on iTRQ.

Built for mission critical and business alike

The high quality, durability and reliability of the iTRQ advanced ear microphone is the result of an impeccable design approach to meet the highest standards required by government agencies and law enforcement officers working in critical scenarios. Professional business users can feel assured that you are getting the same superior industrial class dependability and performance, no matter the size or type of your operation.
