PACKAGING

**uniSy.**

**We make takeaway food packaging from the most sustainable materials available. Transforming takeaway packaging into an industry beyond oil. We pair this with exceptional customer service and a desire to see our customers succeed.**

## We're decent

---

**In 2013, we had a crazy idea; What if we could make packaging from plants?**

So, we set off looking for alternatives to petrochemical based disposable food packaging. Starting with coffee cups, we used paper from managed plantations and lined them with plant sugars (PLA). Since then we've developed a versatile range of products, all made from plants.

We are an innovative packaging company striving to revolutionise the industry by leading the way with a commitment to product stewardship, sustainably produced products, and incredible customer service. We are passionate about helping the UK's leading coffee roasters, cafes, food trucks, and businesses become the most sustainable in the world.

We work shoulder-to-shoulder with our customers, providing packaging options and custom design solutions, to help them stand out in the market.

We are experienced and have a proven track record around reliable supply, and we provide fast delivery anywhere in the UK. We happily provide expertise on everything from the best sustainable packaging options for your business, through to waste-stream options available in your area.

## PAPER

Paper is fantastic, but not all trees are grown equal! Innocent only uses responsibly grown or recycled paper, this paper can then be recycled again and again or composted too.

## PLANT INKS, DYES & GLUES

Plant products know no bounds, all our inks are soy based and the adhesives we use are made from plants too. We also whiten paper products without bleach - using non toxic oxidation.

## PLA

PLA molecules are derived from corn, we use this rather than using plastic made from fossil fuels. We use low-carbon PLA biopolymers made from renewable resources. PLA can break down fully, back into organic molecules.

## CPLA

This is PLA's heat tolerant cousin which maintains the same ability to compost fully but is opaque instead of clear, and a bit more hardy.

## ASTM D6400 Certification

ASTM D6400 certification covers plastics and products made from plastics that are designed to be composted in municipal and industrial aerobic composting facilities. The properties in this specification are those required to determine if plastics and products made from plastics will compost satisfactorily, including biodegrading at a rate comparable to known compostable materials and that the degradation of these materials will not diminish the value or utility of the finished compost.

## DIN EN 13432 Certification

DIN EN 13432 is a European standard, Test scheme and evaluation criteria for the final acceptance of packaging recoverable through commercial composting. The key pass/fail criteria are disintegration, biodegradability, absence of any negative effect on the composting process or key elements of the compost and low level of heavy metals.

## ASTM D6868 Certification

ASTM D6868 certification covers mixed material products which include a bioplastic and determines that the product in its entirety is compostable in a commercial facility. In order to compost satisfactorily, the product must demonstrate each of the three characteristics as follows: (1) proper disintegration during composting; (2) adequate level of inherent biodegradation; and (3) no adverse impacts on the ability of composts to support plant growth.

# Carbon Zero

---

**We are proud to be a Toitu carbonzeroCert™ certified organisation.**

This means we have completed three key steps. Through data analysis and helpful online tools, we measured the emissions from our organisation's activities - this includes everything from shipping our orders, to driving our delivery vans, even our flights to the UK so we could set up decent packaging.

We then set targets to reduce our total emissions, along with our emissions per carton sold. We are a growing company, so proportional emissions are important, but we are shooting for a total reduction year-on-year, because if not now, when?... and if not us, who?

For the third step, Toitu Envirocare help us offset all of our unavoidable emissions through buying carbon credits in New Zealand and Asia - supporting forest growing projects and solar panel programs which are certified to capture carbon and therefore bring our net emissions down to zero!
