

How to update your EyeLights?

You must do the update with a a computer (Macintosh or Windows 10).

A specific Driver is necessary for Windows 7 or Windows 8, you can find it at the end of this document

- It's unnecessary to take the product off your helmet.
- Connect EyeLights to your computer with the original USB cable
- Read attentively the procedure and precautions before install the software (links at the end of the document)

Precautions

Respect with attention all the indications to make sure the update runs smoothly. You need to allow 1 hour to do it. As soon as it done, no intervention is necessary until the end of the procedure.

Your computer needs to be connected

Connect the optical device to main device

Turn off sleep mode of your computer to be sure the loading doesn't stop

You must ONLY use the USB supply by EyeLights

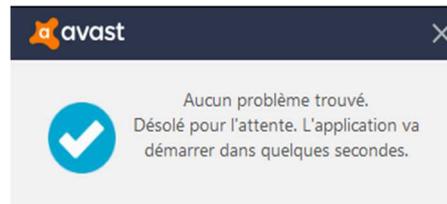

If you see some messages, don't worry, no matter, no cable must be disconnected until you can see the demo on the optical device

During this procedure, don't pay attention to the LED, it could be turn on or off several time.

At the end of the procedure, if the demo program doesn't start again in your EyeLights, send me an email at sav@eye-lights.com.

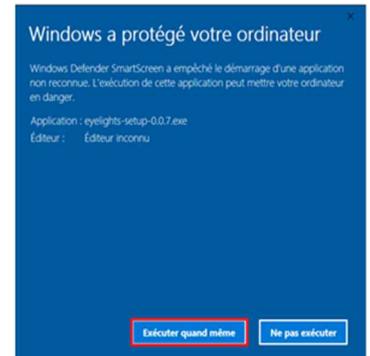

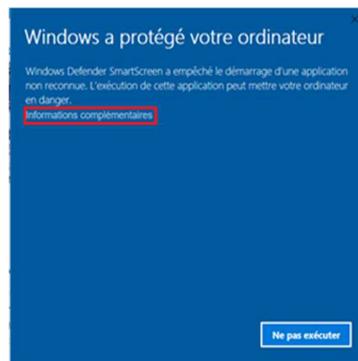

Install the Update software

If during the downloading and installation, your computer brings you something like a malware or the software could create some risks for your computer, don't worry, no danger!

If you use Windows, your computer can warm up and blue screens can appear.

- Clic on « more information »
- Clic on « do it » to start the installation.

Launch the update

Caution : do not unplug your EyeLights during the update, it can damage the device

- Plug your optical device with your main device
- Connect both on your computer with the USB cable given by EyeLights
- Turn on your EyeLights, the blue LED must be light up and the demo must smart
- Start the EyeLights software on your computer and click on « update your EyeLights »

Launch the EyeLights Software
then
Click on « update your EyeLights »

During the update, the EyeLights screen and the LED can flash, it's totally normal, the update is running.

Finalise the update

At the end of the update, there is the message « your EyeLights finalises the installation, please wait few minutes ». **Do not unplug your device and do not close the software.** Please, wait the return of the demo on the EyeLights optical device. It can take 15 minutes.

Caution

When you are at this last screen, be patient a few minutes, the LED must be blue and the demo must be start on your optical device. It can take 15 minutes.

If a message « error » appear, you can find this process:

1. Close the EyeLights software
2. Unplug your EyeLights
3. Turn off your EyeLights, then turn it on
4. Plug the device to your computer and check the connection
5. Open the EyeLights update software and launch the update process
6. If the problem remains, please contact sav@eye-lights.com

As soon as the demo start on your optical device, you can unplug your EyeLights. You have now the last version of the EyeLights embedded software. If you can, give me your opinion about the downloading and your experience with your EyeLights and your EyeLights mobile application.
