

# Find your ring size

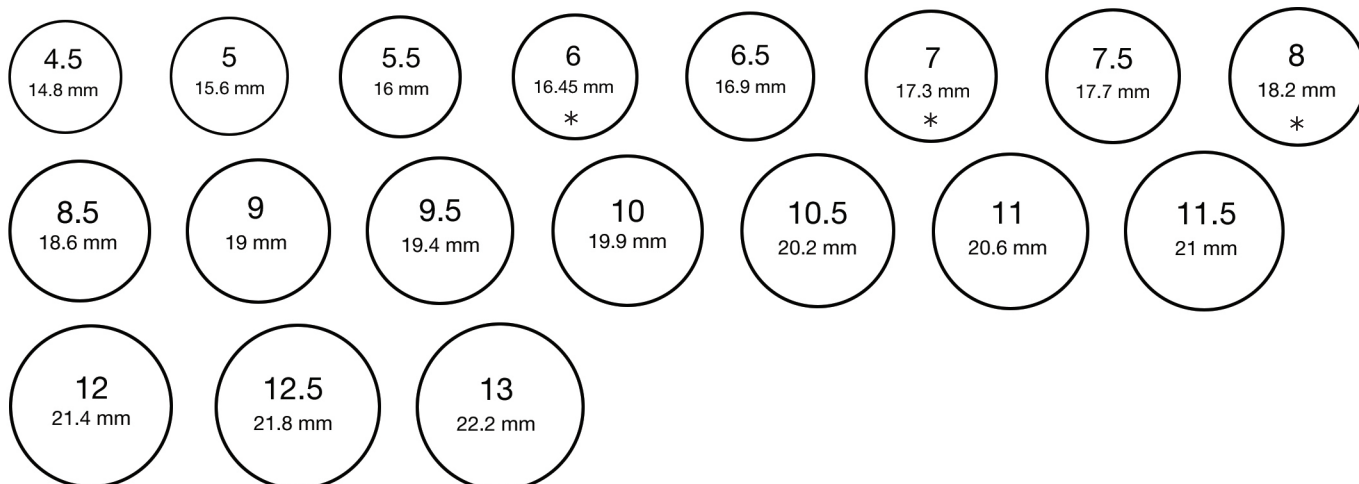

Here are two easy ways to figure out your correct ring size! Print out this paper, making sure that your printer is set to 100%. If these diagrams aren't printed in actual size, your measurements will not be correct. To ensure you've printed at the correct size, place a credit card below. If the card's length fits within the lines, your measurements will be correct!

## Option 1: Measure a ring you already have

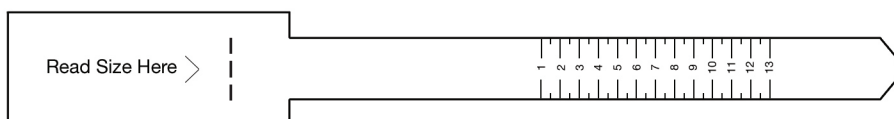

If you have a ring that you know already fits your finger well, you can use this chart to find it's size. Place your ring on these circles and find the circle that matches the inside perimeter of your ring.

\* Currently Lover's Tempo carries sizes 6, 7, and 8.

## Option 2: Use our paper ring sizer

If you don't own any rings to measure, you can use our paper ring sizer to measure your finger directly! Just cut out the sizer below, and make another cut along the dotted line. Once cut, wrap the paper around your finger and insert the end with the measurements through the slit. Pull the paper taught, but not tight, then use the numbers to find your ring size.
