

CANACTIVE LTD – VACCINATION DISCLAIMER FORM

Canactive Ltd recommends your dog is vaccinated according to the 'core' canine UK vaccines as outlined below. In addition to this we also recommend your dog is vaccinated against kennel cough. If your dog is not vaccinated against the 'core' vaccines then we will need to see proof of a titre test and you will need to sign this disclaimer.

The 'core' canine UK vaccines, based on potential morbidity and mortality, are CDV, CPV and CAV, which cause canine distemper, parvovirus infection and infectious canine hepatitis respectively. These vaccines are recommended for all dogs. The 'non-core' canine vaccines are recommended for those puppies and dogs who are at risk of specific infections due to their geographical location, local environment or lifestyle. These include vaccines for canine leptospira, CPi and Bordetella bronchiseptica. Leptospira bacteria, which survive in waterways and ditches and cause the serious bacterial infection canine leptospirosis, are considered ubiquitous in the UK and vaccination is therefore commonly recommended.

I understand the vaccines recommended by Canactive Ltd and acknowledge that I accept full responsibility of any condition my dog may contract at the Canactive Centre without these vaccines. I further agree to not hold Canactive Ltd or their agents or staff liable in any way for any illness related to the lack of these vaccines.
