

# IMPORTANT

## PLEASE READ BEFORE CUTTING

### GENERAL ADVICE

- Before cutting, please check that the covering supplied is the correct design, colour and quantity, and is suitable for the design of your furnishing application.
- Pile fabric requires a covering of calico or similar over foam to protect the back of the fabric.
- Natural characteristics of the covering including scar marks in leather, pile shading in velvet, and cotton seeds in loomstate fabrics are not considered a fault.
- Variations in colour and texture may occur due to the irregular nature of yarns, and to the difference between various dye batches.

**WE REGRET THAT NO RESPONSIBILITY, NOR RETURNS, WILL BE ACCEPTED BY WORTLEY GROUP PTY LTD, IF THE PRODUCT HAS BEEN MARKED OR CUT.**

**Please review fabric for the most appropriate seam construction, before sewing commences (see below).**

- Woven fabric (including Chenilles): recommend 10/12 stitches per 25mm.
- Pile fabric: recommend 8/10 stitches per 25mm.
- While overlocking fabric will assist, using the correct number of stitches per 25mm is critical to the seam performance under stress.
- 20mm minimum selvedge should be taken for sewing.
- Vinyl: recommend 6/7 stitches per 25mm.
- Leather: recommend 6/7 stitches per 25mm.

Where an inappropriate seam construction is used, the Wortley Group Pty Ltd cannot accept responsibility for any seam slippage that may occur.

The performance of any fabric is determined by a number of factors outside the fabric's own durability and appearance retention properties, including but not limited to, the quality and design of the furniture piece, the standard of upholstery, and the level of appropriate care once in use.
