

APEX CERVICAL ORTHOSIS™

- Assists restoration of proper cervical lordosis
- Helps in recovery from whiplash or acceleration/deceleration injury
- Helps reduce pressure on cervical soft tissue
- Counteracts forward head posture

Available From:

PROMOTES SPINAL HEALTH

Forward head posture can be caused by a variety of factors; looking down at hand-held devices, sleeping with the head elevated excessively, or an acute injury such as whiplash. The Apex Cervical Orthosis is an inexpensive, effective tool to assist the Health Care Professional in restoring a patient's proper cervical posture.

The Apex counters forward posture to help restore the proper cervical lordosis when used daily under the supervision of a Health Care Professional. The patented design allows the professional to select the proper height of the Apex Cervical Orthosis for each patient.

TWO LEVELS OF FIRMNESS

Select from the original standard Apex or the gentle version. Patients with an acute injury may find the gentle Apex to be more comfortable.

Standard

Gentle
